
Contents

1. Finite Element Method for Elliptic PDEs	1
1.1 Preliminaries	1
1.2 Sobolev Spaces, Trace Theorems	2
1.3 Equivalence of Norms, Green's Formulae	9
1.4 Variational Formulations	14
1.5 Error Analysis for Coercive and Saddle-Point Problems	19
1.6 Elliptic Regularity	22
1.7 Interpolation Spaces	24
1.8 L^2 - and Ritz Projections, Weak-Norm Estimates	28
1.9 Very Weak Solutions and Trace Theorem in $L^2(\Omega)$	32
2. Elliptic Poincaré-Steklov Operators	37
2.1 Preliminary Remarks	37
2.2 Definition by Means of Neumann-Dirichlet Mapping	40
2.3 Functional Analysis of the Poincaré-Steklov Operators	41
2.4 Reduction of Elliptic Equations to the Interface	46
2.5 FE Approximation to the Poincaré-Steklov Operators	49
2.6 Relation to the Boundary Element Method	53
2.7 Integral Representation to the Poincaré-Steklov Operators	56
2.8 IEM via the Schur Complement	57
2.9 Examples of the Poincaré-Steklov Operators	58
3. Iterative Substructuring Methods	63
3.1 Linear Iterations and Preconditioning	63
3.2 Preconditioned Conjugate Gradient Method	65
3.3 Spectrally Equivalent Preconditioner via Assembling	66
3.4 A Two-level Preconditioner	69
3.5 Preconditioning for Saddle-Point Problem	73
3.6 Schur Complement Method with Mortar Elements	75
4. Multilevel Methods	83
4.1 Multilevel Schwarz Methods	83
4.2 Additive and Multiplicative Algorithms	87
4.3 Non-overlapping Domain Decomposition as the MAS Method	88

4.4	Stable Splitting of the Trace Space	89
4.5	Stable Splitting of H^1 -Norm on the Domain	93
5.	Robust Preconditioners for Equations with	
	Jumping Anisotropic Coefficients	97
5.1	Introduction	97
5.2	Approximation on Spectrum to the Bilinear Form	100
5.3	Robust Condition Number Estimate	105
5.4	Implementation of the Robust Preconditioner	109
5.5	MAS Preconditioner Using Coarse Bubble Functions	111
5.6	Analysis of Anisotropic Coarse Mesh Equation	117
5.7	Numerical Results	121
6.	Frequency Filtering Techniques	125
6.1	Definitions and Basic Ideas	125
6.2	Convergence Analysis for TFF/FF Decompositions	131
6.3	FF Approximation to the Schur Complement	144
6.4	Frequency Filtering for the Interface Equations	151
6.5	Numerical Tests	155
7.	Data-sparse Approximation to the Schur Complement for	
	Laplacian	161
7.1	Factorisation to the Schur Complement on a Rectangle	161
7.2	Matrix Compression on Rectangular Boundaries	165
7.3	Extension to the Case of Polygonal Boundaries	167
7.4	Multilevel Additive Interface Preconditioner	171
7.5	Numerics for the Fast Schur Complement Method	174
7.6	Local Mesh Refinement by Nested Selection	176
7.7	Exterior Boundary Value Problems	183
8.	Discrete Poincaré-Steklov Mappings for Biharmonic and	
	Lamé Equations	189
8.1	Poincaré-Steklov Mapping for Biharmonic Equation	189
8.2	Mixed FE Approximation to S_{Δ^2}	194
8.3	Fast Matrix-Vector Multiplication	201
8.4	Poincaré-Steklov Operators of Planar Elasticity	203
8.5	Towards Data-Sparse Approximation of Factorised	
	Traction Operator	205
9.	Interface Reduction for the Stokes Equation	209
9.1	Introduction and Preliminary Remarks	209
9.2	Description of the Traction Operator Using the Biharmonic	
	Equation	216
9.3	Glowinski-Pironneau Decomposition Scheme	222
9.4	Poincaré-Steklov Operator for Mixed Boundary Conditions ..	223

9.5	FE Approximation to the Direct and Mixed Formulations . . .	226
9.6	Direct Schur Complement Method via Two-level Stabilization	229
9.7	Solving the Saddle-Point Problem	235
9.8	Convergence Analysis for Mixed Approximation	240
9.9	Matrix Compression on Canonical Boundaries	255
9.10	Introduction to Mixed Schur Complement Methods	260
9.11	Interface Preconditioning and Numerics	275
References		279
Index		289

Numerical Solution of Elliptic Differential Equations by
Reduction to the Interface

Khoromskij, B.N.; Wittum, G.

2004, XI, 293 p., Softcover
