INTRODUCTION	ix
CHAPTER I. — INEQUALITIES OF CONVEXITY	I.1
1. The fundamental inequality of convexity	I.1
2. The inequalities of Hölder and Minkowski	I.3
3. The semi-norms N_p	I.4
Exercises for Ch. I	I.6
Historical note	I.8
CHAPTER II. — RIESZ SPACES	II.1
§1. <i>Riesz spaces and fully lattice-ordered spaces</i>	II.1
1. Definition of Riesz spaces	II.1
2. Generation of a Riesz space by its positive elements ...	II.3
3. Fully lattice-ordered spaces	II.4
4. Subspaces and product spaces of fully lattice-ordered spaces	II.5
5. Bands in a fully lattice-ordered space	II.6
§2. <i>Linear forms on a Riesz space</i>	II.9
1. Positive linear forms on a Riesz space	II.9
2. Relatively bounded linear forms	II.10
Exercises for §1	II.15
Exercises for §2	II.19
CHAPTER III. — MEASURES ON LOCALLY COMPACT SPACES ...	III.1
§1. <i>Measures on a locally compact space</i>	III.1
1. Continuous functions with compact support	III.1
2. Approximation properties	III.4
3. Definition of a measure	III.7
4. Product of a measure by a continuous function	III.10
5. Real measures. Positive measures	III.11
6. Absolute value of a complex measure	III.13
7. Definition of a measure by extension	III.15

8. Bounded measures	III.16
9. Vague topology on the space of measures	III.18
10. Compact convergence in $\mathcal{M}(X; \mathbb{C})$	III.21
§2. <i>Support of a measure</i>	III.23
1. Restriction of a measure to an open set. Definition of a measure by means of local data	III.23
2. Support of a measure	III.25
3. Characterization of the support of a measure	III.27
4. Point measures. Measures with finite support	III.29
5. Discrete measures	III.31
§3. <i>Integrals of continuous vector-valued functions</i>	III.32
1. Definition of the integral of a vector-valued function ...	III.32
2. Properties of the vectorial integral	III.34
3. Criteria for the integral to belong to E	III.37
4. Continuity properties of the integral	III.39
§4. <i>Products of measures</i>	III.40
1. The product of two measures	III.40
2. Properties of product measures	III.44
3. Continuity of product measures	III.47
4. Product of a finite number of measures	III.48
5. Inverse limits of measures	III.50
6. Infinite products of measures	III.53
Exercises for §1	III.55
Exercises for §2	III.59
Exercises for §3	III.60
Exercises for §4	III.60
CHAPTER IV. — EXTENSION OF A MEASURE. L^p SPACES	IV.1
§1. <i>Upper integral of a positive function</i>	IV.1
1. Upper integral of a lower semi-continuous positive function	IV.1
2. Outer measure of an open set	IV.4
3. Upper integral of a positive function	IV.6
4. Outer measure of an arbitrary set	IV.10
§2. <i>Negligible functions and sets</i>	IV.11
1. Negligible positive functions	IV.11
2. Negligible sets	IV.12
3. Properties true almost everywhere	IV.12

4. Classes of equivalent functions	IV.13
5. Functions defined almost everywhere	IV.15
6. Equivalence classes of functions with values in $\overline{\mathbf{R}}$	IV.16
§3. L^p spaces	IV.18
1. Minkowski's inequality	IV.18
2. The semi-norms N_p	IV.19
3. The spaces \mathcal{F}_F^p	IV.20
4. p -th power integrable functions	IV.23
5. Properties of p -th power integrable functions	IV.25
6. Directed sets in L^p and increasing sequences in \mathcal{L}^p ..	IV.27
7. Lebesgue's theorem	IV.30
8. Relations between the spaces \mathcal{L}_F^p ($1 \leq p < +\infty$)	IV.31
§4. <i>Integrable functions and sets</i>	IV.32
1. Extension of the integral	IV.32
2. Properties of the integral	IV.34
3. Passage to the limit in integrals	IV.36
4. Characterizations of integrable numerical functions	IV.37
5. Integrable sets	IV.41
6. Criteria for the integrability of a set	IV.43
7. Characterizations of bounded measures	IV.46
8. Integration with respect to a measure with compact support	IV.47
9. Clans and additive set functions	IV.50
10. Approximation of continuous functions by step functions	IV.52
11. Extension of a measure defined on a family of sets	IV.53
§5. <i>Measurable functions and sets</i>	IV.59
1. Definition of measurable functions and sets	IV.59
2. Principle of localization. Locally negligible sets	IV.61
3. Elementary properties of measurable functions	IV.63
4. Limits of measurable functions	IV.64
5. Criteria for measurability	IV.66
6. Criteria for integrability	IV.71
7. Measure induced on a locally compact subspace	IV.73
8. μ -dense families of compact sets	IV.76
9. Locally countable partitions	IV.77
10. Measurable functions defined on a measurable subset ..	IV.78
11. Convergence in measure	IV.80
12. A property of vague convergence	IV.86

§6. <i>Convexity inequalities</i>	IV.89
1. The convexity theorem	IV.89
2. Inequality of the mean	IV.90
3. The spaces L_F^∞	IV.91
4. Hölder's inequality	IV.93
5. Applications: relations between the spaces L_F^p ($1 \leq p \leq +\infty$)	IV.98
§7. <i>Barycenters</i>	IV.101
1. Definition of barycenters	IV.101
2. Extremal points and barycenters	IV.102
3. Applications: I. Vector spaces of continuous real functions	IV.106
4. Applications: II. Vector spaces of continuous complex functions	IV.110
5. Applications: III. Algebras of continuous functions	IV.111
6. Uniqueness of integral representations	IV.115
Exercises for §1	IV.118
Exercises for §3	IV.120
Exercises for §4	IV.120
Exercises for §5	IV.127
Exercises for §6	IV.134
Exercises for §7	IV.142
CHAPTER V. — INTEGRATION OF MEASURES	V.1
§1. <i>Essential upper integral</i>	V.2
1. Definition of the essential upper integral	V.2
2. Moderated functions and measures	V.4
3. Essentially integrable functions	V.7
4. A property special to the essential upper integral	V.10
§2. <i>Summable families of positive measures</i>	V.11
1. Definition of summable families of measures	V.11
2. Integration with respect to a sum of positive measures .	V.12
3. Decomposition of a measure as a sum of measures with compact support	V.14
§3. <i>Integration of positive measures</i>	V.15
1. Functions with values in a space of measures	V.15
2. Superimposed integrals of positive functions	V.20
3. Superimposed integrals of functions with values in a Banach space	V.24

4. Universally measurable functions	V.25
5. Diffusions	V.26
6. Composition of bounded diffusions	V.29
§4. <i>Integration of positive point measures</i>	V.31
1. Families of point measures	V.31
2. Upper integrals of positive functions with respect to an integral of point measures	V.33
3. Measurability with respect to an integral of point measures	V.35
4. Integration of functions with values in a Banach space, with respect to an integral of point measures	V.37
§5. <i>Measures defined by numerical densities</i>	V.38
1. Locally integrable functions	V.38
2. Measures defined by numerical densities	V.40
3. Integration with respect to a measure defined by a density	V.42
4. Behavior of the product with respect to the usual operations	V.45
5. Characterization of measures with base μ	V.48
6. Equivalent measures	V.52
7. Alien measures	V.54
8. Applications: I. Duality of the spaces L^p	V.56
9. Applications: II. Functions of measures	V.60
10. Diffuse measures; atomic measures	V.61
§6. <i>Images of a measure</i>	V.62
1. Image of a positive measure	V.62
2. Integration with respect to the image of a positive measure	V.64
3. Properties of the image of a positive measure	V.65
4. Image of a complex measure	V.68
5. Application: change of variable in the Lebesgue integral	V.69
6. Decomposition into slices. Inverse image of a measure under a local homeomorphism	V.71
§7. <i>Integration with respect to an induced measure</i>	V.74
1. Integration with respect to an induced measure	V.74
2. Properties of induced measures	V.77

§8. <i>Products of measures</i>	V.79
1. Interpretation of the product measure as an integral of measures	V.79
2. Functions measurable with respect to a product of two measures	V.81
3. Integration of positive functions	V.83
4. Integration of functions with values in a Banach space	V.87
5. Operations on the product of two measures	V.89
6. Integration with respect to a finite product of measures	V.91
7. Application: Measure of the Euclidean ball in \mathbf{R}^n	V.93
Exercises for §1	V.94
Exercises for §2	V.95
Exercises for §3	V.96
Exercises for §4	V.99
Exercises for §5	V.99
Exercises for §6	V.107
Exercises for §7	V.112
Exercises for §8	V.114
Historical note	V.123
CHAPTER VI. — VECTORIAL INTEGRATION	VI.1
§1. <i>Integration of vector-valued functions</i>	VI.1
1. Scalarly essentially integrable functions	VI.2
2. Properties of the integral of a scalarly essentially integrable function	VI.5
3. Integrals of operators	VI.7
4. The property (GDF)	VI.9
5. Measurable mappings and scalarly measurable mappings	VI.12
6. Applications: I. Extension of a continuous function to a space of measures	VI.13
7. Applications: II. Extension, to a space of measures, of a continuous function with values in a space of operators	VI.15
§2. <i>Vectorial measures</i>	VI.18
1. Definition of a vectorial measure	VI.18
2. Integration with respect to a vectorial measure	VI.20
3. Majorizable vectorial measures	VI.22

4. Vectorial measures with base μ	VI.25
5. The Dunford-Pettis theorem	VI.27
6. Dual of the space L_F^1 (F a separable Banach space)	VI.32
7. Integration of a vector-valued function with respect to a vectorial measure	VI.33
8. Complex measures	VI.34
9. Bounded complex measures	VI.37
10. Image of a complex measure; induced complex measure; product of complex measures	VI.39
§3. <i>Disintegration of measures</i>	VI.40
1. Disintegration of a measure μ relative to a μ -proper mapping	VI.40
2. Pseudo-image measures	VI.44
3. Disintegration of a measure μ relative to a pseudo-image of μ	VI.45
4. Measurable equivalence relations	VI.46
5. Disintegration of a measure by a measurable equivalence relation	VI.50
<i>Appendix: Complements on topological vector spaces</i>	VI.52
1. Bilinear forms and linear mappings	VI.52
2. Some types of spaces having the property (GDF)	VI.54
Exercises for §1	VI.56
Exercises for §2	VI.62
Exercises for §3	VI.69
Historical note	VI.72
Index of notations	451
Index of terminology	455
