

## Contents

<b>Preface to the Second Russian Edition</b> . . . . .	V
<b>1. The General Theory for One First-Order Equation</b> . . . . .	1
Literature . . . . .	10
<b>2. The General Theory for One First-Order Equation     (Continued)</b> . . . . .	11
Literature . . . . .	20
<b>3. Huygens' Principle in the Theory of Wave Propagation</b> . . . .	21
<b>4. The Vibrating String (d'Alembert's Method)</b> . . . . .	27
4.1. The General Solution . . . . .	27
4.2. Boundary-Value Problems and the Cauchy Problem . . . . .	28
4.3. The Cauchy Problem for an Infinite String. d'Alembert's Formula . . . . .	29
4.4. The Semi-Infinite String . . . . .	31
4.5. The Finite String. Resonance . . . . .	31
4.6. The Fourier Method . . . . .	32
<b>5. The Fourier Method (for the Vibrating String)</b> . . . . .	35
5.1. Solution of the Problem in the Space of Trigonometric Polynomials . . . . .	35
5.2. A Digression . . . . .	36
5.3. Formulas for Solving the Problem of Section 5.1 . . . . .	36
5.4. The General Case . . . . .	36
5.5. Fourier Series . . . . .	37
5.6. Convergence of Fourier Series . . . . .	37
5.7. Gibbs' Phenomenon . . . . .	39

<b>6. The Theory of Oscillations. The Variational Principle</b> . . . . .	41
Literature . . . . .	50
<b>7. The Theory of Oscillations. The Variational Principle (Continued)</b> . . . . .	51
<b>8. Properties of Harmonic Functions</b> . . . . .	65
8.1. Consequences of the Mean-Value Theorem . . . . .	67
8.2. The Mean-Value Theorem in the Multidimensional Case . . . . .	73
<b>9. The Fundamental Solution for the Laplacian. Potentials</b> . . . . .	77
9.1. Examples and Properties . . . . .	78
9.2. A Digression. The Principle of Superposition . . . . .	79
9.3. Appendix. An Estimate of the Single-Layer Potential . . . . .	89
<b>10. The Double-Layer Potential</b> . . . . .	93
10.1. Properties of the Double-Layer Potential . . . . .	94
<b>11. Spherical Functions. Maxwell's Theorem. The Removable Singularities Theorem</b> . . . . .	105
<b>12. Boundary-Value Problems for Laplace's Equation. Theory of Linear Equations and Systems</b> . . . . .	121
12.1. Four Boundary-Value Problems for Laplace's Equation . . . . .	121
12.2. Existence and Uniqueness of Solutions . . . . .	125
12.3. Linear Partial Differential Equations and Their Symbols . . . . .	127
<b>A. The Topological Content of Maxwell's Theorem on the Multifield Representation of Spherical Functions</b> . . . . .	135
A.1. The Basic Spaces and Groups . . . . .	136
A.2. Some Theorems of Real Algebraic Geometry . . . . .	137
A.3. From Algebraic Geometry to Spherical Functions . . . . .	139
A.4. Explicit Formulas . . . . .	141
A.5. Maxwell's Theorem and $\mathbb{C}P^2/\text{conj} \approx S^4$ . . . . .	144
A.6. The History of Maxwell's Theorem . . . . .	145
Literature . . . . .	146
<b>B. Problems</b> . . . . .	149
B.1. Material from the Seminars . . . . .	149
B.2. Written Examination Problems . . . . .	156
