

Contents Volume 3

Calculus in Several Dimensions	787
54 Vector-Valued Functions of Several Real Variables	789
54.1 Introduction	789
54.2 Curves in $\mathbb{R}^n$	790
54.3 Different Parameterizations of a Curve	791
54.4 Surfaces in $\mathbb{R}^n$, $n \geq 3$	792
54.5 Lipschitz Continuity	792
54.6 Differentiability: Jacobian, Gradient and Tangent . . .	794
54.7 The Chain Rule	798
54.8 The Mean Value Theorem	799
54.9 Direction of Steepest Descent and the Gradient	800
54.10 A Minimum Point Is a Stationary Point	802
54.11 The Method of Steepest Descent	802
54.12 Directional Derivatives	803
54.13 Higher Order Partial Derivatives	804
54.14 Taylor's Theorem	805
54.15 The Contraction Mapping Theorem	806
54.16 Solving $f(x) = 0$ with $f : \mathbb{R}^n \rightarrow \mathbb{R}^n$	808
54.17 The Inverse Function Theorem	809
54.18 The Implicit Function Theorem	810
54.19 Newton's Method	811
54.20 Differentiation Under the Integral Sign	812

55 Level Curves/Surfaces and the Gradient	815
55.1 Level Curves	815
55.2 Local Existence of Level Curves	817
55.3 Level Curves and the Gradient	817
55.4 Level Surfaces	818
55.5 Local Existence of Level Surfaces	819
55.6 Level Surfaces and the Gradient	819
 56 Linearization and Stability of Initial Value Problems	 823
56.1 Introduction	823
56.2 Stationary Solutions	824
56.3 Linearization at a Stationary Solution	824
56.4 Stability Analysis when $f'(\bar{u})$ Is Symmetric	825
56.5 Stability Factors	826
56.6 Stability of Time-Dependent Solutions	829
56.7 Sum Up	829
 57 Adaptive Solvers for IVPs	 831
57.1 Introduction	831
57.2 The cG(1) Method	832
57.3 Adaptive Time Step Control for cG(1)	834
57.4 Analysis of cG(1) for a Linear Scalar IVP	834
57.5 Analysis of cG(1) for a General IVP	837
57.6 Analysis of Backward Euler for a General IVP	838
57.7 Stiff Initial Value Problems	840
57.8 On Explicit Time-Stepping for Stiff Problems	842
 58 Lorenz and the Essence of Chaos*	 849
58.1 Introduction	849
58.2 The Lorenz System	850
58.3 The Accuracy of the Computations	852
58.4 Computability of the Lorenz System	854
58.5 The Lorenz Challenge	856
 59 The Solar System*	 859
59.1 Introduction	859
59.2 Newton's Equation	862
59.3 Einstein's Equation	863
59.4 The Solar System as a System of ODEs	864
59.5 Predictability and Computability	867
59.6 Adaptive Time-Stepping	868
59.7 Limits of Computability and Predictability	869

60 Optimization	871
60.1 Introduction	871
60.2 Sorting if Ω Is Finite	872
60.3 What if Ω Is Not Finite?	873
60.4 Existence of a Minimum Point	874
60.5 The Derivative Is Zero at an Interior Minimum Point .	874
60.6 The Role of the Hessian	878
60.7 Minimization Algorithms: Steepest Descent	878
60.8 Existence of a Minimum Value and Point	879
60.9 Existence of Greatest Lower Bound	881
60.10 Constructibility of a Minimum Value and Point	882
60.11 A Decreasing Bounded Sequence Converges!	882
61 The Divergence, Rotation and Laplacian	885
61.1 Introduction	885
61.2 The Case of $\mathbb{R}^2$	886
61.3 The Laplacian in Polar Coordinates	887
61.4 Some Basic Examples	888
61.5 The Laplacian Under Rigid Coordinate Transformations	888
61.6 The Case of $\mathbb{R}^3$	889
61.7 Basic Examples, Again	890
61.8 The Laplacian in Spherical Coordinates	891
62 Meteorology and Coriolis Forces*	893
62.1 Introduction	893
62.2 A Basic Meteorological Model	894
62.3 Rotating Coordinate Systems and Coriolis Acceleration	895
63 Curve Integrals	899
63.1 Introduction	899
63.2 The Length of a Curve in $\mathbb{R}^2$	899
63.3 Curve Integral	901
63.4 Reparameterization	902
63.5 Work and Line Integrals	903
63.6 Work and Gradient Fields	904
63.7 Using the Arclength as a Parameter	905
63.8 The Curvature of a Plane Curve	906
63.9 Extension to Curves in $\mathbb{R}^n$	907
64 Double Integrals	911
64.1 Introduction	911
64.2 Double Integrals over the Unit Square	912
64.3 Double Integrals via One-Dimensional Integration . . .	915
64.4 Generalization to an Arbitrary Rectangle	918
64.5 Interpreting the Double Integral as a Volume	918

64.6	Extension to General Domains	919
64.7	Iterated Integrals over General Domains	921
64.8	The Area of a Two-Dimensional Domain	922
64.9	The Integral as the Limit of a General Riemann Sum	922
64.10	Change of Variables in a Double Integral	923
65	Surface Integrals	929
65.1	Introduction	929
65.2	Surface Area	929
65.3	The Surface Area of a the Graph of a Function of Two Variables	932
65.4	Surfaces of Revolution	932
65.5	Independence of Parameterization	933
65.6	Surface Integrals	934
65.7	Moment of Inertia of a Thin Spherical Shell	935
66	Multiple Integrals	939
66.1	Introduction	939
66.2	Triple Integrals over the Unit Cube	939
66.3	Triple Integrals over General Domains in $\mathbb{R}^3$	940
66.4	The Volume of a Three-Dimensional Domain	941
66.5	Triple Integrals as Limits of Riemann Sums	942
66.6	Change of Variables in a Triple Integral	943
66.7	Solids of Revolution	945
66.8	Moment of Inertia of a Ball	946
67	Gauss' Theorem and Green's Formula in $\mathbb{R}^2$	949
67.1	Introduction	949
67.2	The Special Case of a Square	950
67.3	The General Case	950
68	Gauss' Theorem and Green's Formula in $\mathbb{R}^3$	959
68.1	George Green (1793–1841)	962
69	Stokes' Theorem	965
69.1	Introduction	965
69.2	The Special Case of a Surface in a Plane	967
69.3	Generalization to an Arbitrary Plane Surface	968
69.4	Generalization to a Surface Bounded by a Plane Curve	969
70	Potential Fields	973
70.1	Introduction	973
70.2	An Irrotational Field Is a Potential Field	974
70.3	A Counter-Example for a Non-Convex Ω	976

71 Center of Mass and Archimedes' Principle*	977
71.1 Introduction	977
71.2 Center of Mass	978
71.3 Archimedes' Principle	981
71.4 Stability of Floating Bodies	983
72 Newton's Nightmare*	987
73 Laplacian Models	993
73.1 Introduction	993
73.2 Heat Conduction	993
73.3 The Heat Equation	996
73.4 Stationary Heat Conduction: Poisson's Equation . . .	997
73.5 Convection-Diffusion-Reaction	999
73.6 Elastic Membrane	999
73.7 Solving the Poisson Equation	1001
73.8 The Wave Equation: Vibrating Elastic Membrane . . .	1003
73.9 Fluid Mechanics	1003
73.10 Maxwell's Equations	1009
73.11 Gravitation	1013
73.12 The Eigenvalue Problem for the Laplacian	1017
73.13 Quantum Mechanics	1019
74 Chemical Reactions*	1025
74.1 Constant Temperature	1025
74.2 Variable Temperature	1028
74.3 Space Dependence	1028
75 Calculus Tool Bag II	1031
75.1 Introduction	1031
75.2 Lipschitz Continuity	1031
75.3 Differentiability	1031
75.4 The Chain Rule	1032
75.5 Mean Value Theorem for $f : \mathbb{R}^n \rightarrow \mathbb{R}$	1032
75.6 A Minimum Point Is a Stationary Point	1032
75.7 Taylor's Theorem	1032
75.8 Contraction Mapping Theorem	1033
75.9 Inverse Function Theorem	1033
75.10 Implicit Function Theorem	1033
75.11 Newton's Method	1033
75.12 Differential Operators	1033
75.13 Curve Integrals	1034
75.14 Multiple Integrals	1035
75.15 Surface Integrals	1035
75.16 Green's and Gauss' Formulas	1036
75.17 Stokes' Theorem	1036

76 Piecewise Linear Polynomials in $\mathbb{R}^2$ and $\mathbb{R}^3$	1037
76.1 Introduction	1037
76.2 Triangulation of a Domain in $\mathbb{R}^2$	1038
76.3 Mesh Generation in $\mathbb{R}^3$	1041
76.4 Piecewise Linear Functions	1042
76.5 Max-Norm Error Estimates	1044
76.6 Sobolev and his Spaces	1047
76.7 Quadrature in $\mathbb{R}^2$	1048
77 FEM for Boundary Value Problems in $\mathbb{R}^2$ and $\mathbb{R}^3$	1051
77.1 Introduction	1051
77.2 Richard Courant: Inventor of FEM	1052
77.3 Variational Formulation	1053
77.4 The cG(1) FEM	1053
77.5 Basic Data Structures	1059
77.6 Solving the Discrete System	1060
77.7 An Equivalent Minimization Problem	1061
77.8 An Energy Norm a Priori Error Estimate	1062
77.9 An Energy Norm a Posteriori Error Estimate	1063
77.10 Adaptive Error Control	1065
77.11 An Example	1067
77.12 Non-Homogeneous Dirichlet Boundary Conditions	1068
77.13 An L-shaped Membrane	1068
77.14 Robin and Neumann Boundary Conditions	1070
77.15 Stationary Convection-Diffusion-Reaction	1072
77.16 Time-Dependent Convection-Diffusion-Reaction	1073
77.17 The Wave Equation	1074
77.18 Examples	1074
78 Inverse Problems	1079
78.1 Introduction	1079
78.2 An Inverse Problem for One-Dimensional Convection	1081
78.3 An Inverse Problem for One-Dimensional Diffusion	1083
78.4 An Inverse Problem for Poisson's Equation	1085
78.5 An Inverse Problem for Laplace's Equation	1088
78.6 The Backward Heat Equation	1089
79 Optimal Control	1093
79.1 Introduction	1093
79.2 The Connection Between $\frac{dJ}{dp}$ and $\frac{\partial L}{\partial p}$	1095
80 Differential Equations Tool Bag	1097
80.1 Introduction	1097
80.2 The Equation $u'(x) = \lambda(x)u(x)$	1098
80.3 The Equation $u'(x) = \lambda(x)u(x) + f(x)$	1098

80.4	The Differential Equation $\sum_{k=0}^n a_k D^k u(x) = 0$	1098
80.5	The Damped Linear Oscillator	1099
80.6	The Matrix Exponential	1099
80.7	Fundamental Solutions of the Laplacian	1100
80.8	The Wave Equation in 1d	1100
80.9	Numerical Methods for IVPs	1100
80.10	cg(1) for Convection-Diffusion-Reaction	1101
80.11	Svensson's Formula for Laplace's Equation	1101
80.12	Optimal Control	1101
81	Applications Tool Bag	1103
81.1	Introduction	1103
81.2	Malthus' Population Model	1103
81.3	The Logistics Equation	1103
81.4	Mass-Spring-Dashpot System	1103
81.5	LCR-Circuit	1104
81.6	Laplace's Equation for Gravitation	1104
81.7	The Heat Equation	1104
81.8	The Wave Equation	1104
81.9	Convection-Diffusion-Reaction	1104
81.10	Maxwell's Equations	1105
81.11	The Incompressible Navier-Stokes Equations	1105
81.12	Schrödinger's Equation	1105
82	Analytic Functions	1107
82.1	The Definition of an Analytic Function	1107
82.2	The Derivative as a Limit of Difference Quotients . . .	1109
82.3	Linear Functions Are Analytic	1109
82.4	The Function $f(z) = z^2$ Is Analytic	1109
82.5	The Function $f(z) = z^n$ Is Analytic for $n = 1, 2, \dots$. .	1110
82.6	Rules of Differentiation	1110
82.7	The Function $f(z) = z^{-n}$	1110
82.8	The Cauchy-Riemann Equations	1110
82.9	The Cauchy-Riemann Equations and the Derivative . .	1112
82.10	The Cauchy-Riemann Equations in Polar Coordinates	1113
82.11	The Real and Imaginary Parts of an Analytic Function	1113
82.12	Conjugate Harmonic Functions	1113
82.13	The Derivative of an Analytic Function Is Analytic . .	1114
82.14	Curves in the Complex Plane	1114
82.15	Conformal Mappings	1116
82.16	Translation-rotation-expansion/contraction	1117
82.17	Inversion	1117
82.18	Möbius Transformations	1118
82.19	$w = z^{1/2}$, $w = e^z$, $w = \log(z)$ and $w = \sin(z)$	1119
82.20	Complex Integrals: First Shot	1121

82.21	Complex Integrals: General Case	1122
82.22	Basic Properties of the Complex Integral	1123
82.23	Taylor's Formula: First Shot	1123
82.24	Cauchy's Theorem	1124
82.25	Cauchy's Representation Formula	1125
82.26	Taylor's Formula: Second Shot	1127
82.27	Power Series Representation of Analytic Functions	1128
82.28	Laurent Series	1130
82.29	Residue Calculus: Simple Poles	1131
82.30	Residue Calculus: Poles of Any Order	1133
82.31	The Residue Theorem	1133
82.32	Computation of $\int_0^{2\pi} R(\sin(t), \cos(t)) dt$	1134
82.33	Computation of $\int_{-\infty}^{\infty} \frac{p(x)}{q(x)} dx$	1135
82.34	Applications to Potential Theory in $\mathbb{R}^2$	1136
83	Fourier Series	1143
83.1	Introduction	1143
83.2	Warm Up I: Orthonormal Basis in $\mathbb{C}^n$	1146
83.3	Warm Up II: Series	1146
83.4	Complex Fourier Series	1147
83.5	Fourier Series as an Orthonormal Basis Expansion	1148
83.6	Truncated Fourier Series and Best L_2 -Approximation	1149
83.7	Real Fourier Series	1149
83.8	Basic Properties of Fourier Coefficients	1152
83.9	The Inversion Formula	1157
83.10	Parseval's and Plancherel's Formulas	1159
83.11	Space Versus Frequency Analysis	1160
83.12	Different Periods	1161
83.13	Weierstrass Functions	1161
83.14	Solving the Heat Equation Using Fourier Series	1162
83.15	Computing Fourier Coefficients with Quadrature	1164
83.16	The Discrete Fourier Transform	1164
84	Fourier Transforms	1167
84.1	Basic Properties of the Fourier Transform	1169
84.2	The Fourier Transform $\widehat{f}(\xi)$ Tends to 0 as $ \xi \rightarrow \infty$	1171
84.3	Convolution	1171
84.4	The Inversion Formula	1171
84.5	Parseval's Formula	1173
84.6	Solving the Heat Equation Using the Fourier Transform	1173
84.7	Fourier Series and Fourier Transforms	1174
84.8	The Sampling Theorem	1175
84.9	The Laplace Transform	1176
84.10	Wavelets and the Haar Basis	1177

85 Analytic Functions Tool Bag	1181
85.1 Differentiability and Analyticity	1181
85.2 The Cauchy-Riemann Equations	1181
85.3 The Real and Imaginary Parts of an Analytic Function	1182
85.4 Conjugate Harmonic Functions	1182
85.5 Curves in the Complex Plane	1182
85.6 An Analytic Function Defines a Conformal Mapping	1183
85.7 Complex Integrals	1183
85.8 Cauchy's Theorem	1183
85.9 Cauchy's Representation Formula	1183
85.10 Taylor's Formula	1184
85.11 The Residue Theorem	1184
86 Fourier Analysis Tool Bag	1185
86.1 Properties of Fourier Coefficients	1185
86.2 Convolution	1185
86.3 Fourier Series Representation	1186
86.4 Parseval's Formula	1186
86.5 Discrete Fourier Transforms	1186
86.6 Fourier Transforms	1186
86.7 Properties of Fourier Transforms	1187
86.8 The Sampling Theorem	1187
87 Incompressible Navier-Stokes: Quick and Easy	1189
87.1 Introduction	1189
87.2 The Incompressible Navier-Stokes Equations	1190
87.3 The Basic Energy Estimate for Navier-Stokes	1191
87.4 Lions and his School	1192
87.5 Turbulence: Lipschitz with Exponent $1/3$?	1193
87.6 Existence and Uniqueness of Solutions	1194
87.7 Numerical Methods	1194
87.8 The Stabilized cG(1)dG(0) Method	1195
87.9 The cG(1)cG(1) Method	1196
87.10 The cG(1)dG(1) Method	1197
87.11 Neumann Boundary Conditions	1197
87.12 Computational Examples	1199
References	1205
Index	1207
