## Part I. Introduction

---

### 1. Computational Intelligence in Economics and Finance

Shu-Heng Chen and Paul P. Wang .....	3
1.1 What Is Computational Intelligence? .....	4
1.2 Fuzzy Logic and the Related Disciplines .....	10
1.2.1 Fuzzy Logic .....	10
1.2.2 Rough Sets .....	12
1.2.3 Grey Forecasting .....	13
1.3 Neural Networks and Related Disciplines .....	14
1.3.1 Artificial Neural Networks .....	14
1.3.2 Support Vector Machines .....	18
1.3.3 Self-organizing Maps .....	20
1.3.4 Finite State Automata .....	22
1.3.5 Decision Trees .....	25
1.3.6 K Nearest Neighbors .....	28
1.3.7 Hidden Markov .....	30
1.3.8 Fourier Transforms and Wavelet Transforms .....	30
1.4 Evolutionary Computation and the Related Disciplines .....	33
1.4.1 Evolutionary Computation: the Common Features .....	33
1.4.2 Evolutionary Strategies .....	36
1.4.3 Evolutionary Programming .....	38
1.4.4 Genetic Algorithms and Genetic Programming .....	39
1.4.5 Simulated Annealing .....	39
1.4.6 Ant Algorithms .....	40
1.5 State-Space Approach .....	43
1.6 Application Domains .....	45
1.7 Performance Evaluation .....	46
1.7.1 Prediction .....	47
1.7.2 Classification .....	47
1.7.3 Trading .....	48
1.7.4 Function Optimization .....	49
1.8 Concluding Remarks: Agent-Based Models .....	49
References .....	51

---

**Part II. Fuzzy Logic and Rough Sets**

---

**2. Intelligent System to Support Judgmental****Business Forecasting: the Case of****Estimating Hotel Room Demand**

Mounir Ben Ghalia and Paul P. Wang .....	59
2.1 Introduction .....	59
2.2 Revenue Management System for Hotels .....	62
2.2.1 Demand Forecasting as Part of RMS .....	64
2.2.2 Optimization .....	64
2.3 Forecasting Using Statistical Techniques .....	64
2.3.1 Statistical Forecasting Techniques .....	64
2.3.2 Application to the Estimation of Hotel Room Demand .....	65
2.3.3 Limitations of Statistical Forecasting .....	66
2.4 Judgmental Forecasting in the Hotel Industry .....	67
2.4.1 What Do Hotel Managers Know? .....	67
2.4.2 How Can Informed Judgmental Forecasting Help In-	
crease Revenue? .....	69
2.5 Knowledge Engineering for IS-JFK .....	69
2.5.1 Unstructured Interviews .....	70
2.5.2 Structured Interviews .....	70
2.5.3 Follow-up Questionnaires .....	71
2.5.4 Protocol Extraction .....	71
2.5.5 Knowledge Analysis and Representation .....	72
2.6 Intelligent System to Support Judgmental Forecast and Know-	
ledge (IS-JFK) .....	72
2.6.1 Fuzzification .....	73
2.6.2 Knowledge Base .....	74
2.6.3 Database .....	74
2.6.4 User Support Engine .....	74
2.6.5 Approximate Reasoning Engine .....	74
2.6.6 Defuzzification .....	75
2.7 Forecast Adjustment Using a Direct Approach .....	75
2.7.1 Fuzzy IF-THEN Rules for the Direct Approach .....	75
2.7.2 Example 1 .....	77
2.8 Fuzzy Adjustment via Fuzzy Intervention Analysis .....	83
2.8.1 Intervention Models .....	83
2.8.2 Fuzzy Intervention Models .....	86
2.8.3 Example 2 .....	88
2.9 Conclusion .....	89
References .....	91

### 3. Fuzzy Investment Analysis Using Capital Budgeting and Dynamic Programming Techniques

Cengiz Kahraman and Cafer Erhan Bozdağ .....	93
3.1 Introduction .....	93
3.2 Fuzzy Present Value (PV) Method.....	96
3.3 Fuzzy Capitalized Value Method .....	97
3.4 Fuzzy Future Value Method .....	98
3.5 Fuzzy Benefit/Cost Ratio Method .....	99
3.6 Fuzzy Equivalent Uniform Annual Value (EUAV) Method ...	100
3.7 Fuzzy Payback Period (FPP) Method .....	100
3.8 Ranking Fuzzy Numbers .....	101
3.9 Fuzzy Internal Rate of Return (IRR) Method .....	102
3.10 An Expansion to Geometric and Trigonometric Cash Flows ..	104
3.10.1 Geometric Series–Fuzzy Cash Flows in Discrete Com- pounding .....	104
3.10.2 Geometric Series–Fuzzy Cash Flows in Continuous Compounding.....	105
3.10.3 Trigonometric Series–Fuzzy Continuous Cash Flows ...	106
3.10.4 Numeric Example I.....	107
3.10.5 Numeric Example II .....	108
3.11 Dynamic Programming for Multilevel Investment Analysis ...	109
3.11.1 Fuzzy Dynamic Programming: Literature Review .....	111
3.11.2 Crisp Dynamic Programming for Multilevel Investments .....	113
3.11.3 Fuzzy Dynamic Programming for Multilevel Investments .....	114
3.11.4 A Numeric Example .....	115
3.12 Conclusions.....	124
References .....	125
Appendix .....	126

### 4. Rough Sets Theory and Multivariate Data Analysis in Classification Problems: a Simulation Study

Michael Doumpos and Constantin Zopounidis .....	129
4.1 Introduction .....	129
4.2 Outline of the Rough Sets Approach .....	130
4.3 Experimental Design.....	134
4.4 Results.....	137
4.5 Conclusions.....	143
References .....	145

---

**Part III. Artificial Neural Networks and Support Vector Machines**

---

<b>5. Forecasting the Opening Cash Price Index in Integrating Grey Forecasting and Neural Networks: Evidence from the SGX-DT MSCI Taiwan Index Futures Contracts</b>	
Tian-Shyug Lee, Nen-Jing Chen, and Chih-Chou Chiu . . . . .	151
5.1 Introduction . . . . .	151
5.2 Literature Review . . . . .	153
5.2.1 Lead-Lag Relationship between Index Futures and Cash Markets . . . . .	153
5.2.2 Market Trading Characteristics at the Opening and Closing Stage . . . . .	153
5.3 Neural Networks and Grey Theory . . . . .	154
5.3.1 Neural Networks . . . . .	154
5.3.2 Grey Model and Grey Forecasting . . . . .	156
5.4 Empirical Results and Discussion . . . . .	159
5.4.1 Grey Forecasting Model . . . . .	159
5.4.2 Neural Networks Forecasting Model . . . . .	161
5.5 Robustness Evaluation of the Neural Networks Model . . . . .	164
5.6 Conclusions and Areas of Future Research . . . . .	165
References . . . . .	169
<b>6. A Support Vector Machine Model for Currency Crises Discrimination</b>	
Claudio M. Rocco and José Alí Moreno . . . . .	171
6.1 Introduction . . . . .	171
6.2 Definition of a Currency Crisis . . . . .	171
6.3 Support Vector Machines (SVMs) . . . . .	172
6.3.1 Linear SVM . . . . .	173
6.3.2 Nonlinear SVM . . . . .	176
6.3.3 Imperfect Separation . . . . .	177
6.3.4 SVM Properties . . . . .	177
6.4 Example . . . . .	178
6.5 Conclusions . . . . .	179
References . . . . .	180
<b>7. Saliency Analysis of Support Vector Machines for Feature Selection in Financial Time Series Forecasting</b>	
Lijuan Cao and Francis E. H. Tay . . . . .	182
7.1 Introduction . . . . .	182
7.2 Theory of Support Vector Machines (SVMs) for Regression Estimation . . . . .	184

7.3	Saliency Analysis of SVMs .....	186
7.3.1	Deriving the Sensitivity .....	187
7.3.2	Removing Irrelevant Features .....	188
7.4	Experiments .....	189
7.4.1	Simulated Data .....	189
7.4.2	Real Financial Data .....	192
7.5	Conclusions .....	195
	References .....	199

---

## Part IV. Self-organizing Maps and Wavelets

---

### 8. Searching Financial Patterns with Self-organizing Maps

	Shu-Heng Chen and Hongxing He .....	203
8.1	Motivation and Introduction .....	203
8.2	Self-organizing Maps .....	204
8.3	Charts Constructed by SOM .....	206
8.4	Do SOM-Induced Charts Reveal Trading Signals? .....	209
8.5	SOM-Induced Trading Strategies .....	212
8.6	Concluding Remarks .....	215
	References .....	216

### 9. Effective Position of European Firms in the Face of Monetary Integration Using Kohonen's SOFM

	Raquel Flórez López .....	217
9.1	The Economic and Monetary Union Process .....	217
9.2	ANNs and SOFMs .....	219
9.2.1	Artificial Neural Networks .....	219
9.2.2	Self-organizing Maps .....	220
9.3	Empirical Analysis .....	221
9.3.1	The BACH Database .....	221
9.3.2	Economic Analysis (I): Cost Analysis .....	222
9.3.3	Economic Analysis (II): Profitability Analysis .....	226
9.4	Conclusions .....	229
	References .....	232

### 10. Financial Applications of Wavelets and Self-organizing Maps

	Dimitrios Moshou and Herman Ramon .....	234
10.1	Introduction .....	234
10.2	Wavelets .....	235
10.3	Wavelet Packets .....	236
10.4	Wavelet-Based Denoising .....	237
10.5	Self-organizing Map .....	238

10.6 Wavelet-Based Denoising of Financial Data .....	240
10.7 SOM and Wavelet Combination for Abnormality Detection ..	241
10.8 Conclusions .....	248
References .....	248

---

## Part V. Sequence Matching and Feature-Based Time Series Models

---

### 11. Pattern Matching in Multidimensional Time Series

Arnold Polanski .....	253
11.1 Introduction .....	253
11.2 String Search in a Time Series .....	254
11.3 The Pattern Description Language (PDL) .....	255
11.4 The Pattern Matching Machine (PMM) .....	257
11.5 An Application .....	258
11.6 Conclusions and Further Research .....	260
References .....	261

### 12. Structural Pattern Discovery in Time Series Databases

Weiqiang Lin, Mehmet A. Orgun, and Graham J. Williams .....	262
12.1 Introduction .....	262
12.2 Discrete-Valued Time Series Examples and Their Models ...	263
12.2.1 Some Examples in Discrete-Valued Time Series .....	264
12.2.2 Discrete-Valued Series Models .....	264
12.3 Local Polynomial and Hidden Markov Modeling .....	265
12.3.1 Definitions and Basic Models .....	265
12.3.2 Hidden Markov Models .....	268
12.3.3 Local Polynomial Modeling .....	268
12.4 Local Polynomial Hidden Markov Models .....	270
12.4.1 Modeling DTS .....	270
12.4.2 Structural Pattern Discovery .....	271
12.4.3 Value-Point Pattern Discovery .....	271
12.4.4 Local Polynomial Hidden Markov Model for Pattern Discovery (LPHMM) .....	272
12.5 Experimental Results .....	273
12.5.1 Structural Pattern Searching .....	274
12.5.2 Value-Point Pattern Searching .....	278
12.5.3 LPHMM for Pattern Searching .....	280
12.6 Related Work .....	283
12.7 Concluding Remarks .....	285
References .....	285

<b>13. Are Efficient Markets Really Efficient?: Can Financial Econometric Tests Convince Machine-Learning People?</b>	
Shu-Heng Chen and Tzu-Wen Kuo .....	288
13.1 Introduction .....	288
13.2 Cubist .....	289
13.3 Data Description .....	290
13.4 Experimental Results .....	294
13.5 Conclusions .....	295
References .....	296
<b>14. Nearest-Neighbour Predictions in Foreign Exchange Markets</b>	
Fernando Fernández-Rodríguez, Simón Sosvilla-Rivero, and Julián Andrada-Félix .....	297
14.1 Introduction .....	297
14.2 The NN Approach to Nonlinear Forecasting .....	299
14.2.1 Literature Review .....	299
14.2.2 The Approach in this Paper .....	301
14.2.3 Selecting the Key Parameters in (S)NN Predictions ...	304
14.3 The European Monetary System .....	305
14.4 Assessing the Forecast Accuracy of the NN Predictors .....	306
14.5 Assessing the Economic Value of the NN Predictors .....	312
14.6 Concluding Remarks .....	320
References .....	320
<hr/>	
<b>Part VI. Evolutionary Computation, Swarm Intelligence and Simulated Annealing</b>	
<hr/>	
<b>15. Discovering Hidden Patterns with Genetic Programming</b>	
Shu-Heng Chen and Tzu-Wen Kuo .....	329
15.1 Discovering the Hidden Law of Motion .....	329
15.1.1 Deterministic Chaotic Processes .....	330
15.1.2 Nonlinear Stochastic Time Series .....	334
15.2 Statistical Behavior of Genetic Programming .....	334
15.2.1 Kaboudan's Predictability Test .....	334
15.2.2 The Fitted Residuals of GP .....	336
15.3 Discovering the Technical Trading Rules .....	337
15.3.1 Foreign Exchange Markets .....	338
15.3.2 Stock Markets .....	340
15.3.3 Futures .....	344
15.4 Concluding Remarks .....	346
References .....	346

<b>16. Numerical Solutions to a Stochastic Growth Model Based on the Evolution of a Radial Basis Network</b>	
Fernando Álvarez, Néstor Carrasquero, and Claudio Rocco . . . . .	348
16.1 Introduction . . . . .	348
16.2 Proposed Method . . . . .	349
16.3 Experiments and Results . . . . .	352
16.4 Conclusions . . . . .	355
References . . . . .	357
<b>17. Evolutionary Strategies vs. Neural Networks: an Inflation Forecasting Experiment</b>	
Graham Kendall, Jane M. Binner, and Alicia M. Gazely . . . . .	358
17.1 Introduction . . . . .	358
17.2 Evolutionary Strategies . . . . .	359
17.3 Data and Model Specification . . . . .	360
17.4 Testing and Results . . . . .	362
17.5 Concluding Remarks . . . . .	367
References . . . . .	368
<b>18. Business Failure Prediction Using Modified Ants Algorithm</b>	
Chunfeng Wang, Xin Zhao, and Li Kang . . . . .	369
18.1 Introduction . . . . .	369
18.2 Ants Algorithm . . . . .	371
18.2.1 Main Idea of the Ants Algorithm . . . . .	371
18.2.2 The Improvement of the Ants Algorithm . . . . .	372
18.3 Computation Experiment . . . . .	375
18.3.1 Data and Variables . . . . .	375
18.3.2 The Statistic Characteristic of Data Sets . . . . .	375
18.4 Discretization of Data . . . . .	377
18.5 The Application of the Ants Algorithm in the Classification Problem . . . . .	378
18.5.1 Constructing the Objective Function . . . . .	378
18.5.2 The Description of the Application . . . . .	379
18.6 Implementation . . . . .	381
18.6.1 The Parameters of the Ants Algorithm . . . . .	381
18.6.2 The Partition Rule and Results . . . . .	381
18.7 Discussions . . . . .	382
18.7.1 Classification Accuracy . . . . .	382
18.7.2 External Validity . . . . .	382
18.7.3 Explanatory Ability . . . . .	383
18.7.4 Compared with the Original Ants Algorithm . . . . .	383
18.7.5 The Reduction of the Algorithm's Parameter . . . . .	384

18.7.6 Dynamic Update Mechanism.....	384
18.7.7 The Termination Criterion .....	384
18.7.8 Computation Efficiency .....	384
18.8 Conclusion .....	385
References .....	385
<b>19. Towards Automated Optimal Equity Portfolios</b>	
<b>Discovery in a Financial Knowledge Management System</b>	
Yi-Chuan Lu and Hilary Cheng .....	387
19.1 Introduction .....	387
19.2 A Case Study as Motivation .....	388
19.3 FKMS: A Knowledge Management Solution.....	389
19.4 Data Management .....	391
19.4.1 Defining Metadata.....	391
19.4.2 Data Conversion .....	392
19.4.3 Data Cube Creation .....	392
19.5 Knowledge Discovery via Data Mining Technique .....	393
19.5.1 Multifactor Equity Portfolio Management Issues.....	394
19.5.2 Objective Function and Constraints.....	394
19.5.3 Adaptive Random Search.....	395
19.6 Implementation and Results .....	398
19.6.1 Portfolio Simulation .....	399
19.6.2 Results.....	399
19.7 Knowledge Discovery – with Other Data Mining Applica- tions .....	400
References .....	401
<hr/> <b>Part VII. State Space Modeling of Time Series</b> <hr/>	
<b>20. White Noise Tests and Synthesis of APT Economic</b>	
<b>Factors Using TFA</b>	
Kai Chun Chiu and Lei Xu.....	405
20.1 Introduction .....	405
20.2 The Arbitrage Pricing Theory.....	406
20.3 Temporal Factor Analysis .....	406
20.3.1 An Overview of TFA .....	406
20.3.2 Model Selection vs. Appropriate Number of Factors...	408
20.3.3 Grounds and Benefits for Using TFA in APT Analysis	408
20.3.4 Testability of the TFA Model .....	408
20.4 Tests of White Noise Residuals .....	409
20.4.1 Data Considerations .....	409
20.4.2 Test Statistics .....	409
20.4.3 Empirical Results .....	410

20.5 Synthesis of Economic Factors .....	413
20.5.1 Methodology and Test Statistics.....	415
20.5.2 Empirical Results .....	416
20.6 Conclusion .....	418
References .....	418
 <b>21. Learning and Monetary Policy in a Spectral Analysis Representation</b>	
Andrew Hughes Hallett and Christian R. Richter .....	420
21.1 Introduction .....	420
21.2 The Relationship Between the Time Domain and the Frequency Domain .....	422
21.2.1 Spectra and Cross-spectra in Our Analysis .....	422
21.2.2 Confidence Intervals .....	424
21.2.3 The Indirect Estimation Technique .....	425
21.3 Econometric Implementation: a Time-Varying Approach to the Term Structure of Interest Rates .....	426
21.4 Empirical Results .....	428
21.4.1 Results in the Time Domain .....	428
21.4.2 The Gain and the Phase Shifts in the Implementation of British Monetary Policy 1992–98 .....	429
21.4.3 The Risk Premium on the UK Interest Rate .....	432
21.5 Conclusion .....	434
References .....	434
 <b>22. International Transmission of Business Cycles: a Self-organizing Markov-Switching State-Space Model</b>	
Morikazu Hakamata and Genshirou Kitagawa .....	436
22.1 Introduction .....	436
22.2 Monte Carlo Filter/Smoothing .....	437
22.2.1 General State-Space Model .....	437
22.2.2 Sequential Monte Carlo Filter/Smoothing .....	438
22.3 Self-organizing State-Space Model and Self-Tuning of Parameters .....	440
22.4 Self-organizing Markov-Switching State-Space Model .....	441
22.5 Application .....	444
22.5.1 Data .....	444
22.5.2 Results .....	444
22.6 Conclusions .....	445
References .....	446

---

**Part VIII. Agent-Based Models**

---

**23. How Information Technology Creates Business Value in the Past and in the Current Electronic Commerce (EC) Era**

Yasuo Kadono and Takao Terano .....	449
23.1 Introduction .....	449
23.2 Framework of 3C-DRIVE .....	450
23.2.1 Vertical Axis .....	451
23.2.2 Horizontal Axis .....	453
23.3 Survey of Existing Research and Perspectives .....	454
23.3.1 Perspective of Direct Quantitative Comparison of IT Investment and Value .....	455
23.3.2 Perspective of Information Economics .....	456
23.3.3 Perspective of Alignment Approach .....	456
23.3.4 Perspective of IT-Organization Correlation .....	458
23.3.5 Other Perspectives .....	459
23.4 Simulation Study and Results .....	459
23.4.1 Simulation Objectives and Experimental Setup .....	459
23.4.2 Descriptions of Competitive Environments .....	460
23.4.3 Characteristics of the Agents .....	461
23.4.4 Action Rules of the Agents .....	461
23.4.5 Simulation Results .....	461
23.5 Conclusion .....	464
References .....	465

<b>Author Index</b> .....	467
