

Contents

Part I Remote Sensing Methods in the Atmosphere.....	1
1 Lidar: An Overview	3
1.1 Introduction.....	3
1.2 Backscatter Lidar (Rayleigh-Mie-Lidar)	4
1.3 DIAL.....	7
1.4 Raman Lidar	11
1.5 Doppler-Lidar	14
1.6 Outlook	15
References.....	16
2 Application Perspectives of Intense Laser Pulses in Atmospheric	
Diagnostics	19
2.1 Introduction.....	19
2.2 Interaction of Intense Laser Pulses With Air – Detection of Gases	21
2.3 Interaction of Intense Laser Pulses with Microdroplets – Characterization	
of Aerosols.....	24
2.4 Outlook	31
References.....	32
3 Analysis of Three Dimensional Aerosol Distributions by Means of Digital	
Holography	35
3.1 Abstract.....	35
3.2 Introduction.....	35
3.3 Digital Holography	36
3.4 Storage of the Digital Hologram.....	36
3.5 Digital Reconstruction of the Stored Volume	37
3.6 Development of an Aerosol Analysis Aystem on the Basis of Digital	
Holography	38
3.7 Analysis of Digitally Reconstructed Droplets.....	41
3.8 Recognition of Droplets, Determination of Localization and Size	41
3.9 Results	43
3.10 Field Campaign FELDEX 2000.....	44
3.11 Discussion.....	45
Acknowledgement	46
References.....	47

Part II Applications in Liquid and Solid States.....	49
4 Laser-Based Analysis of Solids with Environmental Impact.....	51
4.1 Introduction	51
4.2 Laser-Induced Fluorescence Spectroscopy	53
4.2.1 Polycyclic Aromatic Hydrocarbons and Mineral Oils in Soils	54
4.2.2 DDT on Wood.....	55
4.2.3 Pesticides on Leaves.....	59
4.2.4 Rock Identification.....	59
4.2.5 Conclusion	59
4.3 Laser-Induced Breakdown Spectroscopy	60
4.3.1 Recycled Thermoplastics from Consumer Electronics Waste.....	61
4.3.2 Inorganic Wood Preservatives.....	62
4.3.3 Transformation of Spatial in Pseudo-Temporal Resolution	63
4.3.4 Multi-Element Detection of Pollutants in Soil	64
4.3.5 Combination Technique: LIBS-LIF	64
4.3.6 Conclusion	65
4.4 Vibrational Spectroscopy.....	65
4.4.1 Infrared Spectroscopy	66
4.4.2 Raman Spectroscopy	66
4.5 Laser Ablation, Laser Desorption, Laser Ionization	67
4.6 Mass Spectrometry	67
4.7 Laser Ablation Inductively Coupled Plasma Mass Spectrometry.....	68
4.8 Laser Ablation Inductively Coupled Plasma Optical Emission Spectrometry.....	68
4.9 Resonance Enhanced Multi-Photon Ionization Time-of-Flight Mass Spectrometry.....	68
4.10 Laser-based Ion Mobility Spectrometry	69
4.10.1 Organic Wood Preservatives	70
4.10.2 Polycyclic Aromatic Hydrocarbons in Soils	71
4.11 Photo- and Optoacoustic Spectroscopy	71
4.11.1 PCP Detection on Wood	72
4.11.2 Determination of the Optical Properties of Human Skin.....	72
4.12 Other Techniques and Outlook	73
References	74
5 Laser-Induced Fluorescence (LIF) Spectroscopy for the In Situ Analysis of Petroleum Product-Contaminated Soils.....	79
5.1 Introduction	79
5.2 Experimental Techniques	81
5.2.1 The LIF demonstrator unit	81
5.2.2 The mobile LIF spectrometer OPTIMOS.....	82
5.2.3 Investigated petroleum products and soil samples	83
5.3 Results and Discussion	84
5.3.1 Photophysical properties of the petroleum products	84
5.3.2 LIF spectroscopic investigations of oil-spiked samples	89

5.3.3 LIF spectroscopic investigations of real-world soils	92
5.3.4 Field investigations.....	93
5.4 Conclusions.....	95
Acknowledgment.....	96
References.....	97
6 Laser Induced Breakdown Spectroscopy (LIBS) in Environmental and Process Analysis.....	99
6.1 Introduction.....	99
6.2 Plasma Generation	100
6.3 Spectrochemical Analysis with Laser Plasmas	104
6.4 Instrumentation.....	108
6.5 Applications in Environmental and Process Analysis.....	112
6.5.1 Solid Samples.....	112
6.5.2 Liquid Samples and Colloids.....	114
6.5.3 Gaseous Samples and Aerosols	115
6.6 Conclusion and Outlook	117
References.....	118
7 Intracavity-, Laser-Desorption- and Cavity Ring-Down Techniques as Detection Devices for Samples in Condensed Phases	125
7.1 An Intracavity Laser Raman Detection Device for HPLC Chromatography	125
7.1.1 Experimental Approach.....	126
7.1.2 Results	128
7.2 Laser Desorption Spectroscopy	130
7.3 Cavity Ring-Down Spectroscopy of the Condensed Phase	131
7.3.1 Introduction	131
7.3.2 Current Status of the Development of Condensed Phase CRDS.....	133
7.3.3 Further Developments of Mirror Coated Thin Film CRDS.....	133
7.3.4 Improved Sensitivity of Detection by Utilizing the Dependence of Absorption on the Spatial Position of the Ultrathin Layer in the Electromagnetic Wave	136
7.3.5 Extension of Our Method to Liquids.....	137
Acknowledgements.....	139
References.....	139
8 Application of Two-Dimensional LIF for the Analysis of Aromatic Molecules in Water.....	141
8.1 Introduction.....	141
8.2 Hardware.....	142
8.2.1 Overview	142
8.2.2 Laser	143
8.2.3 Detection System I	145
8.2.4 Detection System II.....	146
8.2.5 Current development	147

8.2.6 Optimised Sensor Geometry	148
8.3 Data processing and Calibration	150
8.3.1 Introduction	150
8.3.2 PLS-Calibration.....	150
8.3.3 Applications	151
Acknowledgements	160
References	161
Part III Applications for Gaseous Substances and Aerosols	163
9 Chemical Analysis with Multi-Dimensional and On-Line Selectivity Using Laser Spectroscopy Combined with Mass or Species Separation	165
9.1 Introduction	165
9.2 Resonant Laser Mass Spectrometry.....	166
9.3 Laser-assisted Selective Detection in Chromatography.....	170
9.4 Two-Dimensional Selectivity by Absorption/Emission Spectroscopy	173
9.5 Laser-Assisted Analysis of Solid Samples	178
9.6 Diode Lasers: A Step Toward Miniaturization of Laser-Based Chemical Analysis?	184
References	188
10 Rapid Analysis of Complex Mixtures by Means of Resonant Laser Ionization Mass Spectrometry	193
10.1 Introduction	193
10.2 Principles of Laser Ionization Mass Spectrometry	194
10.2.1 Resonant Multiphoton Ionization.....	194
10.2.2 Time-of-flight mass spectrometry	198
10.2.3 Laser desorption	200
10.3 Application Examples.....	201
10.3.1 On-line exhaust gas analysis	201
10.3.2 Soil Analysis	209
10.4 Conclusion	216
Acknowledgement.....	218
References	219
11 Diode-Laser Sensors for In-Situ Gas Analysis.....	223
11.1 Absorption Spectroscopy.....	223
11.2 Mid-Infrared Diode-Laser Spectrometers.....	226
11.3 Near-Infrared Overtone Spectrometer	235
11.4 Quantum Cascade Lasers.....	237
11.5 Quantum Limited Spectroscopy	240
References	242
Part IV Applications in Life Science.....	245
12 Laser Analytics of Gas Samples in Life Science	247

12.1 Introduction.....	247
12.2 Sources of Biological Gas Samples	248
12.2.1 Composition of exhaled breath.....	249
12.2.2 Other biological sources of gaseous emissions	252
12.3 Instrumentation for Laser Analytics of Breath and Other Biological Gas Samples.....	253
12.3.1 Sample collection and preparation	253
12.3.2 Laser spectroscopic techniques	255
12.4 Application of Breath Tests	259
12.4.1 Monitoring of endogenous volatile diseasemarkers in breath	259
12.4.2 Use of stable isotope markers for medical and pharmaceutical research	262
12.5 Conclusion and Perspectives.....	263
References.....	264
 13 Detection of Nitric Oxide in Human Exhalation Using Laser Magnetic Resonance.....	 269
13.1 Free Radical Spectroscopy, a Challenge for Sensitive Detection	269
13.2 Applied Spectroscopy using the LMR Method.....	274
13.2.1 Dynamic Behaviour of NO in Exhalation	274
13.2.2 Blood Pressure Regulating NO	278
13.2.3 In-Vitro Investigations using LMR	280
13.2.4 Applications in Pharmacology	280
13.2.5 Future Development, Smaller and Simpler	280
Acknowledgements.....	281
References.....	282
 14 Medical Trace Gas Detection by Means of Mid-Infrared Cavity Leak-Out Spectroscopy	 283
14.1 Introduction.....	283
14.2 The CO-Overtone Spectrometer	284
14.3 Demonstration of Medical Applications with the CO-Overtone Spectrometer	287
14.3.1 Oxidative Stress.....	287
14.3.2 Measurements on Smokers.....	288
14.4 Further Applications	289
14.5 Transportable Setup (DFG Laser).....	290
14.6 Outlook	292
Acknowledgement	293
References.....	293
 15 Practical Applications of CRDS in Medical Diagnostics.....	 297
15.1 Introduction.....	297
15.2 Cavity Ring-down Spectroscopy	297
15.3 Applications.....	303
15.3.1 Helicobacter Pylori Detection	303

15.3.2 Analysis of the Exhaled Breath in Smokers	308
15.4 Summary.....	310
References	311
16 Photoacoustic Trace Gas Detection in Plant Biology	313
16.1 Introduction	313
16.2 The CO Overtone Laser Photoacoustic Spectrometer	314
16.2.1 Characterization of the spectrometer.....	315
16.2.2 Comparison of acetaldehyde detection with PAS and HPLC	316
16.3 New Radiation Sources for PA Detection	317
16.3.1 Photoacoustic detection with an optical parametric oscillator.....	317
16.4 Application to Plant Physiology	318
16.4.1 Ethylene and ethane from freezing damage	319
16.4.2 Ethane and pentane from germinating peas.....	320
16.4.3 Acetaldehyde emission from flooded poplar trees	321
16.5 Summary.....	322
Acknowledgement.....	322
References	323
17 DNA Adducts as Biomarkers for Carcinogenesis Analysed by Capillary Electrophoresis and Laser-Induced-Fluorescence Detection	325
17.1 Significance of DNA Adducts	325
17.2 Methods for Analyzing DNA Adducts	327
17.3 Reproducibility, Fluorescence-Quenching Phenomenon and Labeling Efficiency	334
17.4 Sensitivity	335
References	336
Index.....	339

Laser in Environmental and Life Sciences

Modern Analytical Methods

Hering, P.; Lay, J.P.; Stry, S. (Eds.)

2004, XXIV, 347 p., Hardcover

ISBN: 978-3-540-40260-2
