

Table of Contents

1	Introduction	1
1.1	Why Another Book about Mechanical Vibrations?	1
1.2	A Short Overview of Theory	5
1.2.1	Single Degree of Freedom (sdof) Systems.....	5
1.2.2	Damped Vibrations.....	6
1.2.3	Multi-Degrees of Freedom (mdof) Dynamic Systems.....	7
1.2.4	Modal Analysis	8
1.2.5	Modal Effective Mass	9
1.2.6	Response Analysis.....	9
1.2.7	Transient Response Analysis.....	10
1.2.8	Random Vibrations.....	11
1.2.9	Shock-Response Spectrum.....	12
1.2.10	Acoustic Loads, Structural Responses	13
1.2.11	Statistical Energy Analysis.....	13
1.2.12	Inertia-Relief	14
1.2.13	Mode Acceleration Method.....	14
1.2.14	Residual Vectors.....	14
1.2.15	Dynamic Model Reduction	15
1.2.16	Component Model Synthesis	16
1.2.17	Load Transformation Matrices.....	17
1.3	Problems.....	17
1.3.1	Problem 1	17
2	Single Degree of Freedom System.....	19
2.1	Introduction.....	19
2.2	Undamped Sdof System.....	20
2.2.1	Solution of an Sdof System with Initial Conditions.....	23

2.2.2 Solution of an Sdof System with Applied Forces	24
2.3 Damped Vibration and the Damping Ratio.....	27
2.3.1 Solution of the Sdof System in the Time Domain.....	29
2.3.2 Solution of the Damped Sdof System with Applied Forces.....	32
2.3.3 Solution in the Frequency Domain.....	34
2.3.4 State Space Representation of the Sdof System.....	42
2.4 Problems.....	45
2.4.1 Problem 1	45
2.4.2 Problem 2	46
2.4.3 Problem 3	46
2.4.4 Problem 4	46
2.4.5 Problem 5	47
2.4.6 Problem 6	47
2.4.7 Problem 7	47
2.4.8 Problem 8	48
3 Damping Models	49
3.1 Introduction.....	49
3.2 Damped Vibration	50
3.2.1 Linear Damping.....	50
3.2.2 Viscous Damping	51
3.2.3 Structural Damping	51
3.2.4 Loss Factor	52
3.3 Amplification Factor	53
3.3.1 Modal Viscous Damping.....	53
3.3.2 Modal Structural Damping.....	54
3.3.3 Discussion of Modal Damping.....	55
3.4 Method of Determining Damping from Measurements.....	56
3.4.1 The Half-Power Point Method	56
3.5 Problems.....	57
3.5.1 Problem 1	57
3.5.2 Problem 2	58
4 Multi-Degrees of Freedom Linear Dynamic Systems	61
4.1 Introduction.....	61
4.2 Derivation of the Equations of Motion	62
4.2.1 Undamped Equations of Motion with Newton's Law.....	62
4.2.2 Undamped Equations of Motion using Energies.....	64
4.2.3 Undamped Equations of Motion using Lagrange's Equations.....	65

4.2.4 Damped Equations of Motion using Lagrange's Equations	67
4.3 Finite Element Method.....	72
4.4 Problems.....	72
4.4.1 Problem 1	72
4.4.2 Problem 2	73
5 Modal Analysis	75
5.1 Introduction.....	75
5.2 Undamped Linear Dynamic Systems.....	75
5.2.1 Natural Frequencies and Mode Shapes	76
5.2.2 Orthogonality Relations of Modes	79
5.2.3 Rigid-Body Modes	82
5.2.4 Left Eigenvectors	86
5.3 Damped Linear Dynamic Systems.....	88
5.3.1 The State Vector	88
5.3.2 Eigenvalue Problem	90
5.3.3 Eigenvectors	91
5.4 Problems.....	94
5.4.1 Problem 1	94
5.4.2 Problem 2	95
6 Natural Frequencies, an Approximation	97
6.1 Introduction.....	97
6.2 Static Displacement Method	97
6.3 Rayleigh's Quotient	100
6.4 Dunkerley's Method	103
6.5 Problems.....	109
6.5.1 Problem 1	109
6.5.2 Problem 2	109
6.5.3 Problem 3	109
6.5.4 Problem 4	110
6.5.5 Problem 5	111
7 Modal Effective Mass	113
7.1 Introduction.....	113
7.2 Enforced Acceleration.....	113
7.3 Modal Effective Masses of an M dof System	116
7.4 Problems.....	124

7.4.1 Problem 1	124
7.4.2 Problem 2	125
8 Response Analysis	127
8.1 Introduction.....	127
8.2 Forces and Enforced Acceleration	127
8.2.1 Relative Motions	128
8.2.2 Absolute Motions	140
8.2.3 Large-Mass Approach	142
8.3 Problems.....	148
8.3.1 Problem 1	148
8.3.2 Problem 2	149
8.3.3 Problem 3	150
9 Transient-Response Analysis	151
9.1 Introduction.....	151
9.2 Numerical Time Integration	153
9.2.1 Discrete Solution Convolution Integral.....	153
9.2.2 Explicit Time-Integration Method.....	155
9.2.3 Implicit Time-Integration Methods	155
9.2.4 Stability	155
9.3 Explicit Time-Integration.....	156
9.3.1 Central Difference Method.....	156
9.3.2 Runge–Kutta Formulae for First-Order Differential Equations	158
9.3.3 Runge–Kutta–Nyström Method for S-O Differential Equations	161
9.4 Implicit Time Integration	161
9.4.1 Houbolt Method	162
9.4.2 Wilson–theta Method	164
9.4.3 Newmark–beta Method	166
9.4.4 The Hughes, Hilber and Taylor (HHT) alpha–Method	168
9.4.5 The Wood, Bossak and Zienkiewicz (WBZ) alpha–Method	169
9.4.6 The Generalised–alpha Algorithm	170
9.5 Piecewise Linear Method.....	171
9.6 Problems.....	172
9.6.1 Problem 1	172
9.6.2 Problem 2	174
9.6.3 Problem 3	174

10 Shock-Response Spectrum	175
10.1 Introduction	175
10.2 Enforced Acceleration	176
10.3 Numerical Calculation of the SRS, the Piecewise Exact Method.....	178
10.4 Response Analysis in Combination with Shock-Response Spectra...	183
10.5 Matching Shock Spectra with Synthesised Time Histories	192
10.6 Problems.....	201
10.6.1 Problem 1	201
10.6.2 Problem 2	202
11 Random Vibration of Linear Dynamic Systems	203
11.1 Introduction	203
11.2 Random Process	203
11.3 Power-Spectral Density	209
11.4 Deterministic Linear Dynamic System	214
11.4.1 Force-Loaded Sdof System	216
11.4.2 Enforced Acceleration	218
11.4.3 Multi-Inputs and Single Output (MISO)	225
11.5 Deterministic M dof Linear Dynamic System	226
11.5.1 Random Forces	226
11.5.2 Random Base Excitation	229
11.5.3 Random Stresses and Forces	231
11.6 Analysis of Narrow-Band Processes	236
11.6.1 Crossings	236
11.6.2 Fatigue Damage due to Random Excitation	240
11.7 Some Practical Aspects	243
11.8 Problems.....	246
11.8.1 Problem 1	246
11.8.2 Problem 2	246
11.8.3 Problem 3	247
11.8.4 Problem 4	247
11.8.5 Problem 5	248
12 Low-Frequency Acoustic Loads, Structural Responses.....	249
12.1 Introduction	249
12.2 Acoustic Loads.....	249
12.3 Equations of Motion.....	251
12.4 Problems.....	262

12.4.1 Problem 1	262
12.4.2 Problem 2	262
13 Statistical Energy Analysis.....	265
13.1 Introduction.....	265
13.2 Some Basics about Averaged Quantities.....	266
13.3 Two Coupled Oscillators.....	272
13.4 Multimode Subsystems	279
13.5 SEA Parameters	285
13.5.1 Subsystem Modal Densities	285
13.5.2 Source Power Input	290
13.5.3 Subsystem Energies.....	291
13.5.4 Damping Loss Factor	296
13.5.5 Coupling Loss Factor	297
13.6 Stresses and Strains.....	300
13.7 Problems.....	301
13.7.1 Problem 1	301
13.7.2 Problem 2	301
13.7.3 Problem 3	302
13.7.4 Problem 4	302
13.7.5 Problem 5	302
13.7.6 Problem 6	303
13.7.7 Problem 7	303
13.7.8 Problem 8	304
14 Free-free Dynamic Systems, Inertia Relief	305
14.1 Introduction.....	305
14.2 Relative Motion.....	305
14.3 Relative Forces.....	306
14.4 Flexibility Matrix	309
14.5 Problems.....	312
14.5.1 Problem 1	312
15 Mode Acceleration Method.....	315
15.1 Introduction.....	315
15.2 Decomposition of Flexibility and Mass Matrix	315
15.2.1 Decomposition of the Flexibility Matrix.....	315
15.2.2 Decomposition of the Mass Matrix	317

15.2.3 Convergence Properties of Reconstructed Matrices	318
15.3 Mode Acceleration Method	320
15.4 Problems.....	327
15.4.1 Problem 1	327
15.4.2 Problem 2	327
15.4.3 Problem 3	328
15.4.4 Problem 4	328
15.4.5 Problem 5	329
16 Residual Vectors	333
16.1 Introduction.....	333
16.2 Residual Vectors.....	333
16.2.1 Dickens Method	333
16.2.2 Rose Method	336
16.3 Problems.....	342
16.3.1 Problem 1	342
17 Dynamic Model Reduction Methods	345
17.1 Introduction.....	345
17.2 Static Condensation Method	346
17.2.1 Improved Calculation of Eliminated Dofs	352
17.3 Dynamic Reduction.....	353
17.4 Improved Reduced System (IRS)	354
17.5 Craig–Bampton Reduced Models.....	357
17.6 Generalised Dynamic Reduction	360
17.7 System Equivalent Reduction Expansion Process (SEREP)	364
17.8 Ritz Vectors	367
17.9 Conclusion	369
18 Component Mode Synthesis	371
18.1 Introduction.....	371
18.2 The Unified CMS Method	372
18.2.1 Modal Truncation	373
18.2.2 General Synthesis of Two Components	374
18.2.3 General Example	376
18.3 Special CMS Methods	381
18.3.1 Craig–Bampton Fixed-Interface Method.....	381
18.3.2 Free-Interface Method.....	386

18.3.3 General-Purpose CMS Method	393
18.4 Problems.....	398
18.4.1 Problem 1	398
18.4.2 Problem 2	399
19 Load Transformation Matrices	401
19.1 Introduction.....	401
19.2 Reduced Model with Boundary Conditions.....	402
19.3 Reduced Free-Free Dynamic Model	406
19.4 Continuous Dynamic Systems	411
19.5 Problems.....	414
19.5.1 Problem 1	414
19.5.2 Problem 2	416
19.5.3 Problem 3	416
19.5.4 Problem 4	417

Mechanical Vibrations in Spacecraft Design

Wijker, J.J.

2004, XVI, 436 p., Hardcover

ISBN: 978-3-540-40530-6
