1 Transistors and Atoms

<i>J. Dąbrowski, E.R. Weber, H.-J. Müssig, W. Schröter</i>	1
1.1 Introduction	1
1.2 MOS Technology	4
1.2.1 The MOS Transistor	4
1.2.2 Technological MOS Processes	6
1.2.3 Trends in CMOS Miniaturization	9
1.3 Technological Progress and Challenges for Modeling	10
1.3.1 Crystal Growth.....	10
1.3.2 Lithography	11
1.3.3 Implantation and Diffusion.....	12
1.3.4 Gate Oxides	14
1.3.5 Deposition and Etch	15
1.3.6 Contacts and Interconnects	16
1.3.7 Yield and Contamination Control	18
1.3.8 Planarization.....	20
1.3.9 Assembly and Packaging.....	21
1.4 The Environment for Process Simulation	21
1.5 What TCAD Can Deliver and What it Can Not	24
1.6 Atomistic Theory.....	27
1.6.1 Accuracy in Ab-initio Methods	29
1.7 Conclusions.....	31
References	32

2 Atomistic Simulations of Processes at Surfaces

<i>P. Kratzer</i>	39
2.1 Introduction	39
2.2 Simulation Methods	44
2.3 Total-energy and Force Calculations	45
2.3.1 Analytical Potentials	47
2.3.2 Tight-binding Molecular Dynamics.....	49
2.3.3 Density-Functional Theory and Other Quantum-Chemical Ab-initio Methods	51
2.4 Selected Applications of Molecular Dynamics Simulations.....	56
2.4.1 Molecular Dynamics Simulations of Surface Melting	56

2.4.2	Molecular Dynamics Simulations of Surface Reactions ..	57
2.5	Kinetic Monte Carlo Simulations for Modeling of Molecular Beam Epitaxy	60
2.6	Concluding Remarks	68
	References	69

3 Atomistic Simulations in Materials Processing

<i>M. Jaraiz</i>	73
3.1 Introduction	73
3.2 The Facts: Diffusion and Defects in Silicon	74
3.2.1 Si Self-Defects	75
3.2.2 V and I Point Defects	75
3.2.3 Foreign Atoms	84
3.2.4 Deep Sub-Micron Si Device Processing	85
3.3 The Models: Atomistic Kinetic Monte Carlo	86
3.3.1 The KMC Concept	86
3.3.2 An Atomistic KMC Simulator (DADOS)	88
3.4 Benchmarking: Simulation Examples	98
3.4.1 Ion Implantation: The “+1” Model	98
3.4.2 {311} Defects and Dislocation Loops	100
3.4.3 Amorphization and Recrystallization	101
3.4.4 Impurity Diffusion/Clustering Mechanisms	102
3.4.5 Fermi Level Effects	105
3.4.6 Device-Size Simulations	105
3.4.7 Conclusions	107
References	107

4 Atomistic Simulation of Decanano MOSFETs

<i>A. Asenov, A.R. Brown, S. Kaya</i>	111
4.1 Introduction	111
4.2 Random Dopant Fluctuations	113
4.2.1 Fluctuation Problem	114
4.2.2 Simulation Approach	117
4.2.3 Conventional Structures	124
4.2.4 Fluctuation Resistant Architectures	129
4.2.5 The Effect of the Poly-Si Gate	130
4.2.6 Quantum Mechanical Corrections	132
4.2.7 Comparative Analysis	135
4.3 Single Charge Trapping	139
4.3.1 Simulation Approach	139
4.3.2 Continuous Doping	140
4.3.3 Discrete Dopant Simulations	141
4.4 Oxide Thickness Variations	143

4.4.1	Interface Reconstruction	144
4.4.2	Implications for Decanano MOSFETs	145
4.5	Line Edge Roughness	150
4.6	Challenges Ahead	152
4.7	Conclusions	152
4.8	List of Acronyms and Symbols	154
	References	154

5 Modeling and Simulation

of Heterojunction Bipolar Transistors

<i>H. Ünlü</i>	157
5.1 Introduction	157
5.2 An Overview of Charge Transport in HBTs	160
5.3 Heteroemitter Energy Band Properties	163
5.3.1 Temperature, Strain, and Composition Effects	164
5.3.2 Conduction and Valence Band Offsets	172
5.4 Charge Transport and Boundary Conditions	175
5.4.1 Conservation of Charge and Trap Levels	177
5.4.2 Boundary Conditions for Electric Potential	178
5.4.3 Boundary Conditions for Carrier Products	182
5.4.4 Boundary Conditions for Quasi-Fermi Levels	183
5.5 The Modeling of Current Transport	184
5.5.1 The Heterojunction Recombination Current	184
5.5.2 The Minority Carrier Diffusion Currents	185
5.6 The Modeling of Current Fluctuations	188
5.7 Results and Discussion	189
5.8 Summary and Future Trends	195
References	197

6 Gate Oxide Reliability:

Physical and Computational Models

<i>A. Ghetti</i>	201
6.1 Introduction	201
6.2 Gate Oxide Reliability	203
6.2.1 Basic Statistical Concepts	203
6.2.2 The Industry Problem	206
6.2.3 General Model	207
6.3 Electrical Stress and Carrier Energy	210
6.3.1 Tunneling	210
6.3.2 Self-Consistent Potential Profile	211
6.3.3 The Transmission Probability	212
6.3.4 Tunneling Current Components	215
6.3.5 Fowler–Nordheim Tunneling	216
6.3.6 Carrier Separation Experiments	218
6.3.7 Trap-Assisted Tunneling	221

6.3.8	Interface State Assisted Tunneling	224
6.3.9	Hot Carriers	225
6.4	Critical Trap Density	227
6.4.1	Experimental Evidence	227
6.4.2	Percolation	229
6.4.3	Area and Percentile Scaling	232
6.5	Defect Generation and Lifetime Extrapolation	234
6.5.1	The Anode Hole Injection Model	235
6.5.2	The Anode Hydrogen Release Model	242
6.5.3	The Thermochemical Model	244
6.5.4	Phenomenological Models	245
6.5.5	Reliability Projections	246
6.6	The Breakdown Mode	248
6.7	Summary and Conclusions	252
	References	253

7 High- K Dielectrics: The Example of Pr_2O_3

	<i>H. J. Osten, J. Dqbrowski, H.-J. Müssig, A. Fissel, V. Zavodinsky</i>	259
7.1	Introduction	259
7.2	Alternative (High- K) Dielectrics	261
7.2.1	General Requirements	261
7.2.2	Available Materials	262
7.2.3	Praseodymium Oxide	265
7.3	Experimental and Theoretical Approach	267
7.4	Results of Structural Investigations	268
7.4.1	Initial Growth	268
7.4.2	Thicker Films	271
7.5	Interface Formation	275
7.6	Layer Stability	282
7.7	Electrical Properties of Pr_2O_3 on Si(001)	287
7.7.1	Band Structures	287
7.7.2	Gate Capacitance and Gate Leakage Current	289
7.7.3	Gate Dielectric Reliability	291
7.7.4	Thermal Stability	291
7.7.5	Process Integration	291
7.8	Outlook	292
	References	293

8 Atomistic Simulation of Si_3N_4 CVD from Dichlorosilane and NH_3

	<i>A.A. Bagatur'yants, A.K. Minushev, K.P. Novoselov, A.A. Safonov, S.Ya. Umanskii, A.S. Vladimirov, A. Korkin</i>	295
8.1	Introduction	295
8.2	Theoretical Study of the Mechanism and Kinetics of Gas-Phase Reactions	297

8.2.1	Introduction	297
8.2.2	Computational Details	298
8.2.3	Results and Discussion	309
8.2.4	Summary and Conclusions	329
8.3	Theoretical Study of the Si_3N_4 Surface Structures and Mechanisms of Some Essential Surface Reactions	330
8.3.1	Introduction	330
8.3.2	Computational Details	330
8.3.3	Results and Discussion	331
8.3.4	Conclusions	343
8.4	Kinetic Monte Carlo Atomic Scale Simulation of Chemical Vapor Deposition of Silicon Nitride Film	344
8.4.1	Introduction	344
8.4.2	Method of Kinetic Monte Carlo Simulation of Film Growth.....	344
8.4.3	Reaction Rate Calculations for Elementary Surface Reactions	346
8.4.4	Results of Calculations	349
8.4.5	Conclusions	351
8.5	General Conclusions and Outlook	352
	References	352
9 Interconnects and Propagation of High Frequency Signals		
	<i>R. Sabelka, C. Harlander, S. Selberherr</i>	357
9.1	Introduction	357
9.2	Interconnect Modeling	359
9.3	Parasitics Extraction.....	362
9.3.1	Capacitance Extraction.....	363
9.3.2	Resistance Extraction	367
9.3.3	Substrate Resistance	368
9.3.4	Inductance Extraction.....	369
9.4	Partial Element Equivalent Circuits.....	372
9.5	Transmission Line Models	373
9.6	Three-Dimensional Analysis	374
9.7	Model Order Reduction	376
9.8	Reliability	377
9.9	Design	378
9.10	Software	380
9.11	Conclusion and Outlook.....	381
	References	382

10 Modeling of Electromigration in Interconnects

<i>V. Petrescu, W. Schoenmaker</i>	387
10.1 Introduction	387
10.1.1 The Physical Basis of Electromigration	388
10.1.2 The Influence of Al Microstructure	391
10.1.3 Mechanical Stress; Critical Stress	392
10.1.4 Elastic Properties of Materials	393
10.1.5 Thermal Stress	393
10.1.6 Electromigration in Multilayer Metallization Structures ..	394
10.1.7 The Blech Length Concept	396
10.1.8 Resistance Change in the Early Phase of Electromigration	397
10.1.9 Change of Resistance under Hydrostatic Stress	398
10.1.10 The Effect of Cu Precipitation on Resistance	398
10.2 Modeling of Electromigration	399
10.2.1 Modeling Aspects of Electromigration and Stress Migration	401
10.2.2 Stress Generation in a Vacancy Diffusion Model	403
10.2.3 Vacancies in Equilibrium	407
10.2.4 The Flux of Vacancies	408
10.2.5 Kirchheim's Vacancy Continuity Equation	410
10.2.6 Kirchheim's Model: Simulation Results	411
10.2.7 The Model of Electromigration and Stress Migration of Clement and Thompson	413
10.2.8 Hydrodynamic Model	417
10.2.9 Vacancies, Stress and Early Resistance Changes	420
10.3 Simulation of Electromigration	421
10.3.1 Scaling of the Constitutive Equations	422
10.3.2 The Discretization Technique	425
10.3.3 Simulation Results	430
10.3.4 Proof of Blech Length	430
10.4 Experimental Validation	437
10.4.1 Early Resistance Change Measurements	438
10.4.2 The Experimental Set-Up	439
10.4.3 The Influence of Cu Addition on the Early Resistance Changes of Al Lines	442
10.4.4 Precipitation in Aluminum-Copper Alloys	442
10.4.5 Samples Fabrication	443
10.4.6 Measurement Results	443
10.4.7 Precipitation Hardening	446
10.4.8 The Dislocation-Solute Atoms Interaction	447
10.4.9 Proof of Blech Length	449
10.5 Conclusion	453
References	453

11 Predictive Modeling of Transition Metal Gettering: Applications and Materials Science Challenges	
<i>A.A. Istratov, W. Huber, E.R. Weber</i>	457
11.1 Introduction	457
11.1.1 Mathematical Basis for Computer Modeling of Gettering	458
11.1.2 Examples of Applications of the Gettering Simulations .	460
11.2 The Road from Qualitative to Predictive Modeling: Materials Science Challenges	462
11.3 Conclusion	466
References	466
Index	469
