1	Introduction	1
1.1	Definitions of Stability	2
1.2	Structural Instability	5
1.3	Methods for Stability Analysis	8
1.4	Summary	10
2	Basic Principles	11
2.1	Introduction	11
2.2	Idealization of Structures	11
2.3	Equations of Equilibrium	11
2.4	Free-Body Diagrams	13
2.5	Work of Externally Applied Forces	15
2.5.1	Eigenwork and Displacement Works	17
2.5.2	Linear Springs	18
2.5.3	Virtual Work	20
2.5.4	The Principle of Superposition of Mechanical Work	22
2.5.5	Non-Linearities	24
2.6	Work of Internal Forces: Strain Energy	25
2.7	The Work Equation	29
2.8	Energy Theorems of Elastic Systems	39
2.9	Potential Energy	43
2.9.1	Total Potential Energy of a Deformable Body	44
2.9.2	Principle of Stationary Potential Energy	45
2.9.3	Applications of Total Potential Energy Principles	46
2.10	Methods of Solution	49
2.10.1	Method of Trial Functions	49
2.10.2	Galerkin Method	60
2.10.3	Finite Difference Method	61
2.10.4	Numerical Integration	66
2.11	Orthogonality of Buckling Modes	78
2.12	Problems	80

3	Rigid-Body Assemblages	87
3.1	Introduction	87
3.2	Methods of Analysis	87
3.2.1	Equilibrium Approach	87
3.2.2	Energy Approach	88
3.3	Single-Degree-of-Freedom Rigid-Bar Assemblages	92
3.3.1	Modeling of Elastically Deformable Elements by Equivalent Springs	96
3.4	Two-Degree-of-Freedom Systems	101
3.5	Discrete Element Method	107
3.6	Problems	114
4	Buckling of Axially Loaded Members (Columns)	119
4.1	Introduction	119
4.2	Buckling Loads for Members with Different End Conditions	119
4.2.1	Hinged-Hinged Strut	120
4.2.2	Fixed-Free Cantilever Strut	121
4.2.3	Fixed-Hinged Strut	123
4.2.4	Fixed-Fixed Strut	124
4.2.5	Struts with Elastic Supports	126
4.2.6	Framed Columns	128
4.3	Concept of Effective Length	135
4.4	Approximate Techniques	139
4.5	Large Deflection Theory	157
4.6	Problems	159
5	Stability Analysis of Beam-Columns	171
5.1	Introduction	171
5.2	Derivation of Basic Equations	171
5.3	Analysis of Beam-Columns	172
5.3.1	Beam-Column with Concentrated Loads	173
5.3.2	Beam-Column with an Interior Moment	176
5.3.3	Beam-Column Subjected to End Moments	177
5.3.4	Beam-Columns Subjected to Distributed Loads	181
5.3.5	Rotationally Restrained Beam-Columns	184
5.4	Beam-Column with Elastic Supports	185
5.4.1	Differential Equation Method	185
5.4.2	Numerical Procedure	189
5.5	Strut with Initial Eccentricity	199
5.6	Interaction Equation	201
5.7	Problems	205

6	Stability Analysis of Frames	213
6.1	Introduction	213
6.2	Classical Approach	213
6.2.1	Continuous Columns and Beam-Columns	213
6.2.2	Rigid-Frames	220
6.3	Semi-Geometrical Approach	227
6.4	Stiffness Method	233
6.4.1	Criterion for Determination of Critical Load	233
6.4.2	Stiffness Matrix Including Axial Force Effects	235
6.5	Stability Functions	240
6.5.1	Member with No Lateral Displacement	240
6.5.2	Member Subjected to a Relative End Displacement Δ	242
6.6	Frames with Sidesway	251
6.6.1	Single-Bay Multi-Storey Frames	257
6.6.2	Multi-Bay Rigid Frames	265
6.6.3	Substitute Frame Method	269
6.7	Rigidly Connected Trusses	272
6.8	Moment Distribution Method	277
6.9	Problems	283
7	Buckling of Members Having Open Sections	291
7.1	Introduction	291
7.2	Torsional Buckling	291
7.2.1	Member Subjected to Torque	291
7.2.2	Member Subjected to Axial Force	299
7.3	Lateral Buckling of Beams	315
7.3.1	Torsional Buckling due to Flexure	315
7.3.2	Torsional Buckling due to Flexure and Axial Force	323
7.4	Lateral Buckling of Beams with Transverse Loads	324
7.4.1	Lateral Buckling of a Cantilever Beam	324
7.4.2	Lateral Buckling of a Simply Supported Beam	328
7.5	Problems	330
8	Elastic Buckling of Thin Flat Plates	335
8.1	Introduction	335
8.2	Governing Differential Equations of Bending	336
8.2.1	Boundary Conditions	341
8.3	Energy Approach	342
8.3.1	Strain Energy of Plates	342
8.3.2	Potential Energy due to In-Plane Forces	343
8.4	Buckling Analysis of Rectangular Plates	344
8.4.1	Governing Differential Equation Solution	344
8.4.2	Stationary Potential Principle	362
8.5	Buckling of Web Plates of Girders	367
8.5.1	Buckling of Rectangular Plate in Shear	368

8.5.2	Buckling of Rectangular Plate due to Non-Uniform Longitudinal Stresses	371
8.5.3	Buckling of Stiffened Plates	374
8.6	Strength of Thin Plates in Compression	383
8.7	Plates Under Longitudinal Compression and Normal Loading	387
8.7.1	Governing Differential Equation Method	387
8.7.2	Energy Approach	390
8.8	Problems	392
9	Stability Analysis of Arches, Rings and Shells	397
9.1	Introduction	397
9.2	Arches	398
9.2.1	Flat Arches	398
9.2.2	Circular Arches	399
9.3	Stability of rings and tubes	406
9.4	Elastic Instability of Thin Shells	410
9.4.1	Governing Differential Equation	411
9.4.2	Energy Approach	415
9.5	Problems	419
10	Inelastic Buckling of Structures	425
10.1	Introduction	425
10.2	Inelastic Buckling of Straight Columns	425
10.2.1	Stress-Strain Relationship	427
10.3	Theories of Inelastic Buckling	430
10.3.1	Reduced Modulus Theory	430
10.3.2	Tangent Modulus Theory	433
10.4	Eccentrically Loaded Columns	436
10.4.1	Analysis of Short Columns	440
10.5	Inelastic Buckling by Torsion and Flexure	443
10.6	Lateral Buckling of Beams in the Inelastic Range	443
10.7	Inelastic Buckling of Plates	444
10.7.1	Plates Subjected to Uniaxial Loading	445
10.7.2	Plate Subjected to In plane Biaxial Loading	448
10.8	Inelastic Buckling of the Shells	449
10.9	Problems	451
11	Structural Design For Stability Of Members	453
11.1	Introduction	453
11.2	Column Design Formula	453
11.3	Local Plate Buckling of Structural Members	457
11.3.1	Average Shear Stress	461
11.3.2	Flexural Buckling of Webs	465
11.3.3	Built-up Sections	466
11.4	Beam Design Formula	468

11.4.1 Lateral Buckling of Beams	468
11.4.2 Effective Length of Compression Flange	469
11.4.3 Codal Provisions	471
11.4.4 Bearing Compressive Stress	476
11.5 Stiffeners	478
11.5.1 Vertical Stiffeners	478
11.5.2 Horizontal Stiffeners	479
11.6 Beam-Column Design Formulae	480
11.6.1 Codal Provisions	482
11.6.2 Design of a Beam-Column Member	484
11.7 Optimum Design	488
11.8 Problems	491
Appendix A: Stability Functions	493
A.1 Stability Functions for Compression Members	493
A.2 Stability Functions for Tension Members	497
A.3 Stability Magnification Factors for Members with Lateral Load	499
Appendix B: Effective Length of Stepped and Multiple Level Load Columns	503
Appendix C: Mathematical Essentials	515
C.1 Linear Differential Equations	515
C.2 Bessel Functions	518
C.3 Fourier Series	524
Appendix D: General References	529
Subject Index	531
