Chapter 1

Fission Yeast in General Genetics	1
R. EGEL	
1.1 Historical Preface	1
1.2 Cell and Life Cycles	2
1.2.1 The Vegetative Cell Division Cycle	2
1.2.2 Mating Types and Life Cycle	3
1.3 Recombination and Genetic Mapping	5
1.3.1 Meiotic Recombination	5
1.3.2 The Genetic Map	7
1.4 A Yeast on Its Own	8
1.5 Supplementary Remarks	9
References	10

Chapter 2

The Genome and Beyond	13
J. BÄHLER, V. WOOD	
2.1 The Fission Yeast Genome Sequence	13
2.1.1 Genome Overview	13
2.1.2 Genome Comparisons	16
2.2 Post-Genomics	19
2.2.1 Genome-Wide Approaches	19
2.2.2 DNA Microarrays	19
2.2.3 Dealing with Large Datasets	21
2.3 Concluding Remarks	23
References	23

Chapter 3

Protein Kinases Driving the Cell Cycle	27
K.L. GOULD	
3.1 Introduction	27
3.2 Cdc2p/Cdk1p Discovery	27
3.3 Cyclin Partners	28
3.4 Rum1p Inhibitor	30

3.5	Regulatory Phosphorylation	30
3.5.1	T-Loop Phosphorylation	30
3.5.2	Tyrosine Phosphorylation	31
3.5.2.1	Wee1p and Mik1p – Inhibitory Kinases	32
3.5.2.2	Cdc25p Phosphatase	32
3.6.3	Plo1p and Autoamplification	33
3.6	Suc1p Adaptor	34
3.7	Some Future Directions	34
3.7.1	Localization Studies	34
3.7.2	Substrates	35
	References	36

Chapter 4

Checkpoint Controls Halting the Cell Cycle	41
A.M. CARR, T. CASPARI	

4.1	DNA Integrity Checkpoints	41
4.1.1	The G ₁ Checkpoint	41
4.1.2	The S _{dNTP} -M Checkpoint	42
4.1.3	The Intra-S Checkpoint	42
4.1.4	The G ₂ -M Checkpoint	43
4.1.4.1	DNA Damage Recognition	44
4.1.4.2	Signal Propagation	44
4.1.4.3	Signal Delivery	45
4.2	Checkpoint Proteins	45
4.2.1	Rad3 and Rad26	45
4.2.2	The RFC and PCNA-Related Checkpoint Proteins	46
4.2.3	Rad4/Cut5, Crb2 and Chk1	47
4.2.4	Mrc1 and Cds1	48
4.2.5	Other Proteins Implicated in the Checkpoints	49
4.2.5.1	Rad18 – Does It Define an Additional Checkpoint Response?	49
4.2.5.2	Rad24 and Rad25	50
4.2.5.3	Cell Cycle Regulators Cdc25, Wee1, Mik1 and Cdc2	50
4.2.6	DNA Repair and Checkpoint Proteins	52
4.3	Concluding Remarks	53
	References	53

Chapter 5

Stress Responses in <i>S. pombe</i>	57
W.M. TOONE, N. JONES	

5.1	Introduction	57
5.2	Key Stress Response Regulators	58
5.3	Heat Stress	60
5.4	ER Stress	64
5.5	Oxidative Stress	65
5.6	Osmotic and Salt Stress	67
5.7	General Stress Response	68

5.8	Perspectives	69
	References	69

Chapter 6

DNA Replication in <i>S. pombe</i>		73
H. MASUKATA, J. A. HUBERMAN, M. G. FRATTINI, T. J. KELLY		
6.1	The Logic of DNA Replication	73
6.2	Replication Origins	75
6.2.1	Why Are Replication Origins Interesting?	75
6.2.2	How Are Replication Origins Identified and Characterized?	76
6.2.3	Biological Characteristics of <i>S. pombe</i> Replication Origins	77
6.2.4	Nucleotide Sequence Elements Important for Origin Function ...	78
6.2.5	Individual ARS Elements	79
6.2.5.1	<i>ars1</i>	81
6.2.5.2	<i>ars2004</i>	82
6.2.5.3	<i>ars3001</i>	82
6.2.5.4	<i>ars3002</i>	82
6.2.5.5	Two Less Well Characterized ARS Elements	82
6.2.6	Timing of Origin Firing	83
6.2.7	Relationship to Replication Origins in Animal Cells	83
6.2.8	Origins, Replication Timing and Heterochromatin	84
6.3	Recognition of Fission Yeast Origins by ORC	84
6.4	Assembly of the Pre-Replication Complex (pre-RC)	86
6.5	Activation of S Phase-Promoting Protein Kinases	88
6.6	Establishment of the Replication Fork	89
6.7	Prevention of Re-Replication by CDK	90
6.8	Checkpoints and Origin Firing	92
6.9	DNA Replication – Future Directions	93
	References	94

Chapter 7

DNA Repair Pathways		101
O. FLECK		
7.1	Introduction	101
7.2	The Long-Patch Mismatch Repair Pathway	102
7.2.1	The Methyl-Directed Mismatch Repair Pathway in <i>E. coli</i>	102
7.2.2	The MutS/MutL-Related Mismatch Repair System in Eukaryotes ..	102
7.2.3	The MutS/MutL-Related Repair System in <i>S. pombe</i>	103
7.2.3.1	Repair of Replication Errors	103
7.2.3.2	Correction of Mismatches in Meiotic Recombination	104
7.3	Nucleotide Excision Repair	106
7.3.1	Human Nucleotide Excision Repair	106
7.3.2	Nucleotide Excision Repair in <i>S. pombe</i>	107
7.3.2.1	Repair of DNA Damage	107
7.3.2.2	Mismatch Correction and Mutation Avoidance	108
7.4	Uve1-Dependent Repair	110

7.5	Base Excision Repair	111
7.6	Recombinational Repair Activities	112
7.6.1	Homologous DSB Repair	112
7.6.2	Nonhomologous End Joining	112
	References	113

Chapter 8

The Retrotransposons of <i>S. pombe</i>		117
H. L. LEVIN		
8.1	Introduction	117
8.2	The Structure of the Tf Elements and Their Function	118
8.3	The Transposition Sites of Tf1	120
8.4	A Unique Mechanism of Self-Priming in Tf1	122
8.5	Specialized Mechanism for Transport of Tf1 into the Nucleus	125
8.6	Concluding Remarks	126
	References	127

Chapter 9

Mating-Type Cassettes: Structure, Switching and Silencing		129
B. ARCANGIOLI, G. THON		
9.1	Introduction	129
9.2	Mating-Type Switching	129
9.2.1	Biological Aspects	129
9.2.2	Mating-Type Loci	130
9.2.3	Mating-Type Switching Pattern	130
9.2.4	<i>cis</i> - and <i>trans</i> -Acting Elements Controlling the Switching Potential	133
9.2.5	Single-Strand DNA Modification and Gene Conversion at <i>mat1</i>	134
9.2.6	Asymmetric Developmental Potential and Replication Polarity	135
9.3	Silencing	138
9.3.1	Silenced Region	138
9.3.2	Silencing Assays	139
9.3.3	<i>cis</i> -Acting Elements – Epigenetic States	139
9.3.4	<i>trans</i> -Acting Factors – Heterochromatin Formation	140
9.3.5	Redundancy of Silencing	141
9.3.6	Boundaries of the Silenced Region	142
9.4	Interplay Between Mating-Type Switching and Silencing	142
	References	144

Chapter 10

Centromere and Kinetochore Structure and Function		149
R. ALLSHIRE		
10.1	Introduction	149
10.2	Centromere Localization and Dynamics	150
10.3	Centromere DNA	151
10.3.1	Organization	151

10.3.2	Functional Elements – Mitosis	151
10.3.3	Functional Elements – Meiosis	154
10.3.4	Suppression of Recombination Within Centromeres	155
10.4	Centromere Chromatin and Silencing	155
10.4.1	Chromatin Structure	155
10.4.2	Histone Modifications	155
10.4.3	Transcriptional Silencing	156
10.4.4	Connections with Other Silent Chromatin	156
10.4.5	Factors Contributing to Silent Centromeric Chromatin	157
10.5	Centromere and Kinetochore-Associated Proteins	158
10.5.1	Outer-Repeat Proteins	158
10.5.2	A Link with the RNAi Machinery	159
10.5.3	CENP-B-Like Proteins	160
10.5.4	Inner-Repeat and Central-Core Proteins	160
10.5.5	Microtubule-Interacting Proteins at Centromeres	162
10.6	Cohesion and Segregation Defects	163
10.6.1	Mitotic Centromere Cohesion	163
10.6.2	Centromeric Cohesion During Meiosis I, the Reductional Division	164
10.6.3	Aurora Kinase – A Passenger at Centromeres	165
10.7	Concluding Remarks	165
	References	166

Chapter 11

	Chromosome Cohesion and Segregation	171
	K. TAKAHASHI, M. YANAGIDA	
11.1	Introduction	171
11.2	Anaphase-Promoting Complex and Related Factors	172
11.2.1	The APC/C Proteasome Connection	172
11.2.2	The Spindle Assembly Checkpoint	175
11.3	Separase and Securin	177
11.4	Cohesin and Related Factors	178
11.4.1	The Cohesin Complex	178
11.4.2	Meiosis-Specific Cohesin Subunits	180
11.4.3	Cohesin Loading by Adherin	181
11.4.4	Establishment of Cohesion	181
11.5	Condensin and Related Factors	182
11.5.1	The Condensin Complex	182
11.5.2	Chromosomal Passenger Proteins	183
11.5.3	Other Factors Involved in Condensation	184
11.6	Concluding Remarks	185
	References	186

Chapter 12

Telomere Organization and Nuclear Movements	191
Y. HIRAOKA, Y. CHIKASHIGE	
12.1 Introduction	191
12.2 Telomere Organization	192
12.2.1 Molecular Organization of the Telomere	192
12.2.2 Telomeric Heterochromatin and Nuclear Positioning	194
12.2.3 Telomere Integrity and Chromosome Circularization	195
12.3 Nuclear Movements	196
12.3.1 Meiotic Telomere Clustering and Nuclear Movements	196
12.3.2 Microtubule Dynamics During Nuclear Movements	198
12.3.3 The Role for Telomeres in Meiosis	199
12.3.4 Genetic Control for Telomere Clustering	202
12.4 Concluding Remarks	202
References	203

Chapter 13

The Mitotic Spindle and Genome Segregation	207
I.M. HAGAN	
13.1 Introduction	207
13.2 <i>S. pombe</i> Microtubules	207
13.2.1 The Microtubule Cytoskeleton	207
13.2.2 Structure of the Mitotic Spindle	209
13.3 Spindle Pole Body	210
13.3.1 SPB Structure and Duplication	210
13.3.2 Composition of the SPB	212
13.4 Microtubule-Associated Proteins	213
13.4.1 Motors Versus Non-motor MAPs	213
13.4.2 Microtubule Motor Proteins	214
13.4.3 The BimC-Related Kinesin Cut7	214
13.4.4 C-Terminal Kinesins Pkl1 and Kpl2	215
13.4.5 The Kip3-Related KLPs: Klp5 and Klp6	215
13.4.6 Non-motor MAPs: Dis1, Mtc1/Alp14 and Mal3	216
13.5 Regulatory Aspects	217
13.5.1 Regulation of Spindle Formation	217
13.5.2 Coordinating Cell Cycle Progression from the SPB	218
13.5.3 Control of Mitotic Progression	220
13.6 Perspectives	220
References	221

Chapter 14

The Fission Yeast Actomyosin Cytoskeleton	225
Y. GACHET, D.P. MULVIHILL, J.S. HYAMS	
14.1 Introduction	225
14.2 Various Roles of Actin Function	225

14.2.1	Actin Is Involved in Cell Growth and Division	225
14.2.2	Actin Is Also Important for Sex	227
14.2.3	Actin and Actin-Binding Proteins	228
14.2.4	Anti-Actin Drugs	230
14.2.5	Actin Is Involved in Spindle Orientation	231
14.2.6	Actin–Microtubule Interactions	231
14.3	Fission Yeast Myosins	232
14.3.1	Myosins Are Motor Proteins	232
14.3.2	Myosin II	232
14.3.3	Myosin V	236
14.3.4	Myosin I	237
14.4	Concluding Remarks	237
	References	238

Chapter 15

	Regulation of Cytokinesis	243
	M.K. BALASUBRAMANIAN, D. MCCOLLUM	
15.1	Introduction	243
15.2	Positioning of the Actomyosin Ring and the Division Septum . . .	244
15.3	Actomyosin Ring Assembly	246
15.4	Coordination of Mitotic Exit with Division Septum Assembly – the SIN	247
15.5	The SIN and the Cytokinesis Checkpoint	248
15.6	Assembly of the Division Septum	249
15.7	Concluding Remarks	250
	References	251

Chapter 16

	Control of Cell Polarity and Morphogenesis in Fission Yeast	255
	F. CHANG, F. VERDE	
16.1	Introduction	255
16.2	Signal Transduction and the Control of Cell Morphology	256
16.3	Cytoskeleton Organization	259
16.3.1	The Interphase Actin Cytoskeleton	259
16.3.2	The Interphase Microtubule Cytoskeleton	260
16.4	The Teal System: Linking Microtubules to Cell Polarity	261
16.5	Nuclear Positioning – Setting the Cell Division Site	263
16.6	Concluding Remarks	264
	References	265

Chapter 17

	Cell Wall Synthesis	269
	A. DURÁN, P. PÉREZ	
17.1	Introduction	269
17.2	Cell Wall Composition and Structure	270

17.3	Biosynthesis and Modification of the Cell Wall Components	271
17.3.1	β -D-Glucan	271
17.3.2	α -D-Glucan	272
17.3.3	Chitin	273
17.3.4	Other Polymers	273
17.4	Regulation of Cell Wall Biosynthesis	274
17.5	Concluding Remarks	275
	References	276

Chapter 18

Mating-Type Control and Differentiation	281
---------------------------------------------------	-----

O. NIELSEN

18.1	Introduction	281
18.2	Cell-Type Identity	284
18.2.1	Control of Mating Type	284
18.2.2	Pheromone Production	285
18.3	Pheromone Response	285
18.3.1	Pheromone Response Pathway	285
18.3.2	Activation of Byr2	286
18.3.3	Pheromone-Induced Transcription	287
18.3.4	The Ras1 Pathway	288
18.4	Morphological Response to Pheromone	288
18.4.1	Reorganization of Cell Polarity	288
18.4.2	Agglutination, Cell Fusion and Karyogamy	289
18.5	Nutritional Sensing	290
18.6	Mating and the Cell Cycle	292
	References	293

Chapter 19

Initiation of Meiosis	297
---------------------------------	-----

M. YAMAMOTO

19.1	Introduction	297
19.2	Molecular Events at the Onset of Meiosis	298
19.3	Repressors and Activators of Meiosis	299
19.3.1	Regulation of the <i>ste11</i> Gene	299
19.3.2	Pat1 Kinase and Its Pseudosubstrate Mei3p	300
19.4	Mei2p, an RNA-Binding Protein Pivotal in Meiosis	302
19.4.1	Mei2p Localization – A Nucleocytoplasmic Shuttle	302
19.4.2	Mei2p Control – Downregulation by Phosphorylation	303
19.5	Transcriptome for Meiosis	304
19.6	Meiosis-Specific Cohesin and Chromosome Segregation	305
19.7	Other Factors Relevant to Meiosis	306
19.8	Concluding Remarks	307
	References	307

Chapter 20

Control of Late Meiosis and Ascospore Formation	311
C. SHIMODA, T. NAKAMURA	
20.1 Introduction	311
20.2 The Expression of Genes Responsible for Late Meiosis and Sporulation	312
20.2.1 Isolation and Molecular Analysis of Sporulation-Specific Genes . .	312
20.2.2 Transcriptional Control of <i>spo</i> Genes	315
20.2.3 Post-Transcriptional Regulation of <i>mes1</i> Gene Expression	316
20.3 Dissecting the Sporulation Process	316
20.3.1 Overview	316
20.3.2 A Link Between Meiosis II and Sporulation	317
20.3.2.1 A Novel Cdc7 Protein Kinase Complex Involved in Meiosis II and Sporulation	317
20.3.2.2 Other Meiosis II Regulators	318
20.3.3 Morphological Alteration of the SPB Needed for Sporulation	318
20.3.3.1 Electron-Microscopic Observations	318
20.3.3.2 Components of the SPB Responsible for Its Structural Alteration .	319
20.3.4 Formation of Forespore Membranes	319
20.3.4.1 Forespore Membrane Assembly Leading to Spore Formation	319
20.3.4.2 Origin of Vesicles Needed for Forespore Membrane Formation . . .	321
20.3.4.3 A Link Between Meiosis and Forespore Membrane Assembly	322
20.3.5 Construction of Spore Walls	323
20.4 Spore Germination	323
20.5 Concluding Remarks	324
References	325

Chapter 21

RNA Polymerases and Accessory Factors	329
M. KIMURA, H. MITSUZAWA, A. ISHIHAMA	
21.1 Introduction	330
21.2 RNA Polymerase II (Pol II)	330
21.2.1 Synthesis of Rpb Subunits	330
21.2.2 Transcription of the <i>rpb</i> Genes	332
21.2.3 Assembly of Rpb Subunits	333
21.2.4 Structure of Pol II	334
21.2.5 Subunit Functions	334
21.2.6 Phosphorylation of Rpb Subunits	334
21.2.7 CTD Kinases and CTD Phosphatase	335
21.3 Pol II-Specific Transcription Factors	336
21.3.1 General Transcription Factor TFIID	336
21.3.2 Mediators	337
21.4 RNA Polymerase I (Pol I)	338
21.5 RNA Polymerase III (Pol III)	338
21.5.1 Pol III-Transcribed Genes and Promoters	338
21.5.2 Pol III Subunits	339

21.5.3	Pol III Transcription Apparatus	339
21.6	Concluding Remarks	340
	References	340

Chapter 22

	Core Promoters in <i>S. pombe</i> : TATA and HomolD Boxes	343
	I. WITT, K. KIVINEN, N.F. KÄUFER	
22.1	Introduction	343
22.2	The TATA Core Promoter	343
22.2.1	TATA, Transcription Initiation Site and Initiator Element	343
22.2.2	TATA Elements in Core Promoters of RNA Polymerases I and III	345
22.3	The HomolD Core Promoter	345
22.3.1	HomolD and Transcription Initiation	345
22.3.2	HomolD-Binding Proteins and Basal-Transcription Machinery	346
22.3.3	HomolE, a Proximal UAS in a HomolD Core Promoter	347
22.4	Regulation of Genes Containing the HomolD Core Promoter	348
22.5	Prospects	349
	References	350

Chapter 23

	Mechanism and Control of Pre-mRNA Splicing	353
	A.N. KUHN, N.F. KÄUFER	
23.1	Introduction	353
23.2	The Spliceosomal RNA Machinery	354
23.3	Intron Structure	356
23.4	Assembly of the Spliceosome	356
23.4.1	In Vitro Analysis of Spliceosome Assembly	356
23.4.2	How Are Spliceosomes Assembled in vivo?	357
23.5	Proteins in Pre-mRNA Splicing	357
23.5.1	RNA-Rearranging Proteins	358
23.5.2	The Central Organizer	358
23.5.3	Prp4p, a Kinase Involved in Pre-mRNA Splicing	358
23.5.3.1	Interactions of Prp4p Kinase with Spliceosomal Proteins	359
23.5.3.2	Prp1p, a Physiological Substrate of Prp4p Kinase	360
23.5.3.3	Control of Pre-mRNA Splicing by Prp4p Kinase – Two Models	361
23.5.4	SR Proteins	362
23.6	Is There Alternative Splicing in <i>S. pombe</i> ?	362
23.7	SMN and snRNP Maturation/Recycling	363
23.8	Pre-mRNA Splicing and the Link to the Cell Cycle	364
23.9	Outlook	365
	References	365

Chapter 24

Transcription Termination	369
A. P. HADCROFT, N. J. PROUDFOOT	
24.1 Introduction	369
24.2 Pol II Transcription Termination	370
24.2.1 Polyadenylation Signals	370
24.2.1.1 Mammals	370
24.2.1.2 Budding Yeast	371
24.2.1.3 Fission Yeast	371
24.2.2 Transcript Processing and Transcription Termination	372
24.3 Pol I Transcription Termination	375
24.4 Pol III Transcription Termination	377
24.5 Concluding Remarks	378
References	378

Chapter 25

Ubiquitin-Dependent Proteolysis by the Proteasome	381
M. STONE, C. GORDON	
25.1 Introduction	381
25.2 Structure of the Proteasome	382
25.2.1 20S Core	382
25.2.2 19S Regulator	383
25.3 Genes Encoding 26S Proteasome Subunits in <i>S. pombe</i>	384
25.4 Recognition and Delivery of Substrates	385
25.5 Localization of the Proteasome	387
25.6 Chaperone Activity of the 26S Proteasome	388
25.7 Deubiquitinating Activity and the Proteasome	389
25.8 The Proteasome and the Cell Cycle	390
25.9 Concluding Remarks	390
References	391

Chapter 26

Processing Proteases in <i>S. pombe</i>	395
G. LADDS, J. DAVEY	
26.1 Introduction	395
26.2 Processing of the P-Factor Mating Pheromone	395
26.2.1 Signal Peptidase	397
26.2.2 The Dibasic Endopeptidase	397
26.2.2.1 Proteases with Shared Functions to Krp1	398
26.2.3 Trimming by Carboxypeptidase and Aminopeptidase	400
26.3 Processing of the M-Factor Mating Pheromone	401
26.3.1 C-Terminal Proteolysis	401
26.3.2 N-Terminal Proteolysis	403
26.4 Concluding Remarks	403
References	404

Chapter 27

Protein Glycosylation	405
T.R. GEMMILL, R.B. TRIMBLE	
27.1 Introduction	405
27.2 The Galactosyltransferases	405
27.3 O-Glycosylation – Overview	406
27.4 N-Glycosylation – Overview	407
27.5 GPI Anchor Biosynthesis	411
27.6 Concluding Remarks	411
References	412

Chapter 28

Mitochondrial Genetics in a Petite-Negative Yeast	415
B. SCHÄFER, K. WOLF	
28.1 Introduction to Fission Yeast Mitochondria	415
28.2 Replication, Repair, Integrity and Segregation of mt DNA	415
28.3 Petite Negativity	417
28.4 Mitochondrial Mutants	418
28.4.1 Segregational Petites	418
28.4.2 Mitochondrial Drug Resistance Mutations	418
28.4.3 Mitochondrial Mutants Conferring Respiratory Deficiency (ρ^0 , ρ^- , mit^-)	418
28.5 Formal Mitochondrial Genetics	420
28.5.1 Mitotic Segregation in Diploids	420
28.5.2 Random-Spore and Tetrad Analysis	420
28.6 Organization of the mt Genome	421
28.6.1 Transcription	421
28.6.2 Genes of the Translational Apparatus	421
28.7 The Bifunctional Gene <i>rps3</i>	422
28.7.1 The Structure of the <i>rps3</i> Gene	422
28.7.2 Functional Analysis of the <i>rps3</i> Gene	422
28.8 Mosaic Genes and Introns	423
28.8.1 Construction of an Intronless mt Genome	423
28.8.2 Group I Introns	423
28.8.3 Functions of Group I Intron-Encoded Proteins	424
28.8.4 Group II Introns	425
28.8.5 Group II Intron-Encoded Proteins	426
28.8.6 Horizontal Intron Transfer?	426
References	427

Chapter 29

Fission Yeast Phylogenesis and Evolution	431
M. SÍPICZKI	

29.1	Introduction	431
29.2	Taxonomy and Systematics	431
29.3	Phylogenetic Position of the Genus	433
29.3.1	Phylogenetic Roots from Comparative Sequence Analyses	433
29.3.2	Fungi and Animals, Sister Clades in Most Phylogenies	434
29.3.3	<i>Schizosaccharomyces</i> , a Basal Branch of Ascomycota	435
29.3.4	“Close” Relationship to a Diverse Group?	436
29.3.5	Phylogenesis Within the Genus	436
29.3.6	Horizontal Gene Transfer?	437
29.3.7	Time Scaling	437
29.4	Descent from Multicellular Filamentous Ancestors	438
29.5	Is <i>Schizosaccharomyces</i> Close to the Roots of Fungi and Animals?	439
29.6	Different Rates of Evolution in Different Lineages of Yeast?	440
29.7	Concluding Remarks	440
	References	441

Subject Index	445
--------------------------------	-----

The Molecular Biology of *Schizosaccharomyces pombe*

Genetics, Genomics and Beyond

Egel, R. (Ed.)

2004, XXVIII, 450 p., Hardcover

ISBN: 978-3-540-00693-0
