Part I Transport Processes in Polymers

1 Transport Processes: Fundamentals

<i>D. Fink and M. Behar</i>	7
1.1 Diffusion in Polymers: Overview	9
1.2 Case I Diffusion	11
1.2.1 Regular Fickian Diffusion	11
1.2.2 Some Special Cases and Peculiarities	15
1.2.3 One-Dimensional Diffusion in a Semi-infinite Medium	19
1.2.4 One-Dimensional Diffusion in a Thin Foil	20
1.2.5 Permeation through a Membrane	21
1.2.6 Case I Diffusion with Drift	23
1.2.7 Electrolytes in Polymers	24
1.2.8 Case I Diffusion with Sorption	25
1.2.9 Chemical Reaction Kinetics	29
1.2.10 Numerical Solution of Diffusive Problems	30
1.2.11 Clustering Phenomena	31
1.2.12 Three-Dimensional Case I Diffusion	34
1.3 Case II and Anomalous Diffusion	34
1.3.1 Swelling	35
1.3.2 Case II Diffusion Models	36
1.4 Penetration along Pores	38
1.4.1 Diffusional Penetration along Latent Tracks	38
1.4.2 Penetration along Etched Tracks	38
1.4.3 Capillarie Penetration along Tracks	39
1.5 Interfaces	43

2 Transport Processes in Low-Energy Ion-Irradiated Polymers

<i>D. Fink and V. Hnatowicz</i>	51
2.1 Transport of Implanted Penetrants; General Remarks	51
2.2 Thermal Diffusion of Implanted Ions	55
2.3 Radiation-Enhanced Diffusion	55

2.3.1	Self-Radiation-Enhanced Transport of Ions Implanted into Polymers after Low-Fluence Irradiation	55
2.3.2	Radiation-Enhanced Transport of Ions in Polymers	61
2.4	Transport of Metals in Polymers	64
2.4.1	Transport of Metals through Metal/Polymer Interfaces	64
2.4.2	Transport of Ion-Implanted Metals in Polymers	65
2.5	Transport Processes of High-Fluence Implanted Ions	67
2.6	Transport Processes of Liquid Penetrants within Ion-Irradiated Polymers	71
2.6.1	Liquid Penetrants in Ion-Irradiated Polymers	71
2.6.2	Transport of Penetrants in Three Dimensions	76
2.7	Penetration of Gases into Ion-Irradiated Polymers	79
2.8	The Influence of Surfaces on the Transport of Penetrants	82
2.9	Transport of Intrinsic Polymer Components after Ion Irradiation	83
2.9.1	Mobility of Radiochemical Products	83
2.9.2	Photoresist Inhibitor Mobility	84
2.9.3	Thermal-Stability Enhancement of Photoresists	87
2.10	Transport of Charge Carriers in Irradiated Polymers	89
2.11	Summary and Concluding Remarks	89
 3 Transport Processes in Tracks		
	<i>D. Fink, V. Hnatowicz, and P. Yu. Apel</i>	97
3.1	Transport of Solids in Ion Tracks	98
3.1.1	Latent Tracks	98
3.1.2	Etched Tracks	99
3.2	Transport of Liquids in Ion Tracks	99
3.2.1	Penetration of Liquids into Hydrophobic and Hydrophilic Polymers	99
3.2.2	Depth Profiles of Penetrating Liquids	100
3.2.3	Transport of Liquids into Latent Tracks: Corrosion Effects and Aging	120
3.2.4	Swelling after Penetration of Liquids into Latent Tracks	121
3.2.5	Latent-Track Sensibilization (Sensitization) and Grafting	123
3.2.6	Transport of Liquids through Etched Tracks	124
3.2.7	Transport of Suspended Particles through Etched Tracks	126
3.2.8	Transport Processes in Irradiated Biological Matter	127
3.3	Transport of Gases in Ion Tracks	128
3.3.1	Latent Tracks	128
3.3.2	Etched Tracks	131
3.4	Current Transport through Ion Tracks Embedded in Liquids	132
3.4.1	Electrolytes in Latent Tracks	132

3.4.2	Etched Tracks	134
3.5	Transmission of Energetic Ions through Tracks in Vacuum	139
3.5.1	Latent Tracks	139
3.5.2	Etched Tracks	139
4 Ion-Track Etching		
	<i>P. Yu. Apel and D. Fink</i>	151
4.1	Basics of Etching Physics and Chemistry	151
4.1.1	Etching Kinetics	151
4.1.2	Etching of Hydrophobic and Hydrophilic Polymers	153
4.1.3	Ion-Track Swelling	156
4.1.4	Etching of Polymers with Structural Inhomogeneities. Why Are Ion Tracks Preferentially Etched?	159
4.1.5	Selection of Appropriate Etchants for Developing Ion Tracks	161
4.2	Etching Threshold and Track-Etch Sensitivity	167
4.2.1	Basic Definitions	167
4.2.2	Sensitivity Depends on the Polymer Structure	169
4.2.3	Sensitivity Depends on the Etching Conditions	170
4.2.4	Track-Etch Response at High Stopping Power	172
4.2.5	The Realization of Ion-Track Etching	174
4.3	Environmental Effects and Track Sensitization	176
4.4	Shapes of Etched Tracks	180
4.4.1	Modeling the Track Shape on the Microscopic Scale	180
4.4.2	Examples of Etched Tracks in Polymers	183
4.4.3	Track Etching in the Case of Insoluble Fillers or Etching Products	186
4.5	Etched-Track Profiles in the Nanometer Range	190
4.6	Thermal Stability of Etched Tracks	196
4.7	Techniques to Improve the Visibility of Very Small Etched Tracks	196
4.8	Cases of Inverse Etching	197

Part II Applications

5 Applications of Low-Energy Polymer Ion Irradiation

	<i>V. Hnatowicz and D. Fink</i>	209
5.1	Lithography for Electronics	209
5.2	Micromachining by Focused Ion Beams	212
5.3	Applications of Ion-Beam-Modified Surfaces	213
5.3.1	Tribological Applications	213
5.3.2	Enhancement of Metal-Polymer Adhesion	214
5.3.3	Aerospace Technology: Applications that Require Enhanced Chemical Resistance	214

5.3.4	Nuclear-Waste Management: Applications that Require Reduced Permeability	215
5.4	Applications of Changes of Optical Properties of Irradiated Polymers	215
5.5	Applications of Changes of Electrical Conductivity of Irradiated Polymers	216
5.6	Ion-Beam-Modified Polymers for Medicine and Biotechnology	219

6 Ion-Track Manipulations

<i>D. Fink</i>	231
6.1 Manipulation of Latent Tracks	231
6.1.1 Material Chemical Conversion and Phase Transitions	231
6.1.2 Trapping of Migrating Impurities at Latent Tracks	232
6.1.3 Use of Ion-Induced Excess Free Volume	232
6.1.4 Manipulation of Latent Tracks for Production of Etched-Track Patterns	232
6.2 Manipulation of Etched Tracks	233
6.2.1 Formation of Track Templates from the Vapor Phase	233
6.2.2 Formation of Massive Track Templates (Rods, Wires, Fibers) from the Liquid Phase.....	236
6.2.3 Tubule Formation by Chemical Bath and Electrodeless Deposition Processes	246
6.3 Formation of Complex Nanostructures	256
6.4 Electrical and Magnetic Properties of Nanowires and Nanotubules	260
6.5 Nonstatistical Ion-Track Distributions	263
6.6 Approaches Competing with Ion Tracks for Applications	264

7 Ion-Track Applications

<i>D. Fink, P.Yu. Apel, and R.H. Iyer</i>	273
7.1 Applications of Latent Tracks	273
7.2 Applications of Etched Tracks	275
7.2.1 Etched-Track Membranes	275
7.2.2 Applications of Ion Tracks in Dosimetry and Related Fields	278
7.2.3 Applications of Etched Tracks in Lithography	278
7.2.4 Applications of Etch Tracks for Galvanic Replicas	279
7.2.5 Applications of Etched Tracks in Separation Technology ...	279
7.2.6 Applications of Etched Tracks in Sensing Technology	284
7.2.7 Other Chemical Applications of Etched Tracks	289
7.2.8 Biomedical Applications	289
7.2.9 Applications of Etched Tracks in Novel Packing Materials	292
7.2.10 Electronic Applications	296
7.2.11 Magnetic Applications	304

7.2.12 Optical Applications	308
7.2.13 Mechanical Applications?	310
7.2.14 Statistical or Spatially Defined Ion Impact?	310

Part III Conclusion

8 Concluding Remarks

<i>D. Fink</i>	321
