Part I The General Theory of Relativity

Introduction	3
1 Physics in External Gravitational Fields	9
1.1 Characteristic Properties of Gravitation	9
1.2 Special Relativity and Gravitation	14
1.3 Spacetime as a Lorentzian Manifold	22
1.4 Non-gravitational Laws in External Gravitational Fields	23
1.4.1 Motion of a Test Body in a Gravitational Field	24
1.4.2 Energy and Momentum “Conservation” in the Presence of an External Gravitational Field	28
1.4.3 Electrodynamics	30
1.5 The Newtonian Limit	34
1.6 The Redshift in a Stationary Gravitational Field	35
1.7 Fermat’s Principle for Static Gravitational Fields	37
1.8 Geometric Optics in Gravitational Fields	40
1.9 Stationary and Static Spacetimes	44
1.10 Spin Precession and Fermi Transport	50
1.10.1 Spin Precession in a Gravitational Field	51
1.10.2 Fermi Transport	52
1.10.3 The Physical Difference Between Static and Stationary Fields	55
1.10.4 Spin Rotation in a Stationary Field	57
1.10.5 Adapted Coordinate Systems for Accelerated Observers	58
2 Einstein’s Field Equations	65
2.1 Physical Meaning of the Curvature Tensor	65
2.2 The Gravitational Field Equations	72
2.3 Lagrangian Formalism	84
2.3.1 The Einstein-Hilbert Action	85
2.3.2 Reduced Bianchi Identity and General Invariance	87
2.3.3 Energy-Momentum Tensor in a Lagrangian Field Theory	89
2.3.4 Analogy with Electrodynamics	92

2.3.5	Meaning of the Equation $\nabla \cdot T = 0$	93
2.3.6	Variational Principle for the Coupled System	94
2.4	Non-localizability of the Gravitational Energy	96
2.5	On Covariance and Invariance	97
2.6	The Tetrad Formalism	100
2.7	Energy, Momentum, and Angular Momentum for Isolated Systems	110
2.8	The Initial Value Problem of General Relativity	120
2.8.1	Nature of the Problem	121
2.8.2	Constraint Equations	122
2.8.3	Local Existence and Uniqueness Theorems	125
2.8.4	Characteristics of Einstein's Field Equations	131
2.9	General Relativity in $3 + 1$ Formulation	134
2.9.1	Generalities	134
2.9.2	Connection Forms	136
2.9.3	Curvature Forms, Einstein and Ricci Tensors	138

Part II Applications of General Relativity

3	The Schwarzschild Solution and Classical Tests of General Relativity	147
3.1	Derivation of the Schwarzschild Solution	147
3.2	Equation of Motion in a Schwarzschild Field	156
3.3	Perihelion Advance	159
3.4	Deflection of Light	164
3.5	Time Delay of Radar Echoes	170
3.6	Geodetic Precession	174
3.7	Schwarzschild Black Holes	178
3.7.1	The Kruskal Continuation of the Schwarzschild Solution	179
3.7.2	Spherically Symmetric Collapse to a Black Hole	190
3.8	Penrose Diagram for Kruskal Spacetime	199
3.8.1	Conformal Compactification of Minkowski Spacetime	200
3.8.2	Penrose Diagram for Schwarzschild-Kruskal Spacetime	202
3.9	Charged Spherically Symmetric Black Holes	203
3.9.1	Resolution of the Apparent Singularity	204
3.9.2	Timelike Radial Geodesics	206
3.9.3	Maximal Extension of the Reissner-Nordström Solution	208
3.10	Appendix: Spherically Symmetric Gravitational Fields	213
4	Weak Gravitational Fields	219
4.1	The Linearized Theory of Gravity	219
4.2	Nearly Newtonian Gravitational Fields	225
4.3	Gravitational Waves in the Linearized Theory	228
4.4	Energy Carried by a Gravitational Wave	237

4.4.1	The Short Wave Approximation	238
4.4.2	Discussion of the Linearized Equation $R_{\mu\nu}^{(1)}[h] = 0$	240
4.4.3	Averaged Energy-Momentum Tensor for Gravitational Waves	242
4.5	Emission of Gravitational Radiation	247
4.5.1	Slow Motion Approximation	248
4.5.2	Rapidly Varying Sources	251
4.5.3	Radiation Reaction (Preliminary Remarks)	252
4.5.4	Simple Examples and Rough Estimates	253
4.6	Laser Interferometers	261
4.7	Gravitational Field at Large Distances from a Stationary Source	264
4.8	Gravitational Lensing	272
4.8.1	Three Derivations of the Effective Refraction Index . . .	272
4.8.2	Deflection by an Arbitrary Mass Concentration	275
4.8.3	The General Lens Map	277
4.8.4	Magnification, Critical Curves and Caustics	281
4.8.5	Simple Lens Models	283
4.8.6	Relation Between Shear and Observable Distortions . .	291
4.8.7	Mass Reconstruction from Weak Lensing	293
5	The Post-Newtonian Approximation	297
5.1	Motion and Gravitational Radiation (Generalities)	297
5.2	Field Equations in Post-Newtonian Approximation	303
5.3	Stationary Asymptotic Fields in Post-Newtonian Approximation	310
5.4	Point-Particle Limit	312
5.5	The Einstein-Infeld-Hoffmann Equations	316
5.6	Precession of a Gyroscope in the Post-Newtonian Approximation	325
5.7	General Strategies of Approximation Methods	330
5.8	Binary Pulsars	335
5.8.1	Discovery and Gross Features	335
5.8.2	Timing Measurements and Data Reduction	340
5.8.3	Theoretical Analysis of the Arrival Times	344
5.8.4	Results for Keplerian and Post-Keplerian Parameters .	354
6	White Dwarfs and Neutron Stars	363
6.1	Introduction	363
6.2	White Dwarfs	365
6.2.1	The Free Relativistic Electron Gas	366
6.2.2	Thomas-Fermi Approximation for White Dwarfs	367
6.2.3	Historical Remarks	371
6.3	Formation of Neutron Stars	373
6.4	General Relativistic Stellar Structure Equations	375

6.5	Linear Stability	380
6.6	The Interior of Neutron Stars	383
6.6.1	Qualitative Overview	383
6.6.2	Ideal Mixture of Neutrons, Protons and Electrons	385
6.6.3	Oppenheimer-Volkoff Model	387
6.6.4	Pion Condensation	388
6.7	Equation of State at High Densities	389
6.7.1	Effective Nuclear Field Theories	389
6.7.2	Many-Body Theory of Nucleon Matter	390
6.8	Gross Structure of Neutron Stars	391
6.9	Bounds for the Mass of Non-rotating Neutron Stars	393
6.9.1	Basic Assumptions	393
6.9.2	Simple Bounds for Allowed Cores	396
6.9.3	Allowed Core Region	396
6.9.4	Upper Limit for the Total Gravitational Mass	399
6.10	Rotating Neutron Stars	400
6.11	Cooling of Neutron Stars	403
6.12	Neutron Stars in Binaries	405
6.12.1	Some Mechanics in Binary Systems	405
6.12.2	Some History of X-Ray Astronomy	407
6.12.3	X-Ray Pulsars	408
6.12.4	X-Ray Bursters	412
6.12.5	Formation and Evolution of Binary Systems	414
6.12.6	Millisecond Pulsars	415
7	Black Holes	419
7.1	Proof of Israel's Theorem	420
7.2	Derivation of the Kerr Solution	432
7.2.1	Axisymmetric Stationary Spacetimes	433
7.2.2	The Ernst Equation	436
7.2.3	Ricci Curvature	440
7.2.4	Weyl Coordinates	445
7.2.5	Conjugate Solutions	448
7.2.6	Basic Equations in Elliptic Coordinates	449
7.2.7	The Kerr Solution	452
7.3	Discussion of the Kerr-Newman Family	457
7.3.1	Gyromagnetic Factor of a Charged Black Hole	458
7.3.2	Static Limit and Stationary Observers	459
7.3.3	Killing Horizon and Ergosphere	460
7.3.4	Coordinate Singularity at the Horizon and Kerr Coordinates	464
7.3.5	Structure of the Light Cones and Event Horizon	465
7.3.6	Penrose Mechanism	466
7.3.7	Geodesics of a Kerr Black Hole	466
7.4	Accretion Tori Around Kerr Black Holes	473

7.4.1	Newtonian Approximation	474
7.4.2	General Relativistic Treatment	476
7.5	The Four Laws of Black Hole Dynamics	479
7.5.1	The Zeroth Law of Black Hole Dynamics	480
7.5.2	The First Law for the Kerr-Newman Family	483
7.5.3	The Second Law of Black Hole Dynamics	485
7.6	Evidence for Black Holes	486
7.6.1	Black Hole Formation	487
7.6.2	Black Hole Candidates in X-Ray Binaries	489
7.6.3	The X-Ray Nova XTE J118+480	490
7.6.4	Super-Massive Black Holes	491
7.7	Appendix: Mathematical Appendix on Black Holes	493
7.7.1	Proof of the Weak Rigidity Theorem	493
7.7.2	The Zeroth Law for Circular Spacetimes	494
7.7.3	Geodesic Null Congruences	496
7.7.4	Area Law for Black Holes	505
8	The Positive Mass Theorem	507
8.1	Total Energy and Momentum for Isolated Systems	508
8.2	Witten's Proof of the Positive Energy Theorem	511
8.3	Generalization to Black Holes	514
8.4	Penrose Inequality	517
8.5	Appendix: Spin Structures and Spinor Analysis in General Relativity	518
8.5.1	Spinor Algebra	518
8.5.2	Spinor Analysis in GR	522
<hr/> Part III Differential Geometry <hr/>		
9	Differentiable Manifolds	529
10	Tangent Vectors, Vector and Tensor Fields	535
10.1	The Tangent Space	535
10.2	Vector Fields	541
10.3	Tensor Fields	543
11	The Lie Derivative	547
11.1	Integral Curves and Flow of a Vector Field	547
11.2	Mappings and Tensor Fields	549
11.3	The Lie Derivative	550

12 Differential Forms	555
12.1 Exterior Algebra	555
12.2 Exterior Differential Forms	557
12.3 Derivations and Antiderivations	558
12.4 The Exterior Derivative	561
12.5 Relations Among the Operators d , i_X and L_X	563
12.6 The $*$ -Operation and the Codifferential	564
12.6.1 Oriented Manifolds	564
12.6.2 The $*$ -Operation	565
12.6.3 The Codifferential	569
12.7 The Integral Theorems of Stokes and Gauss	571
12.7.1 Integration of Differential Forms	571
12.7.2 Stokes' Theorem	573
13 Affine Connections	577
13.1 Covariant Derivative of a Vector Field	577
13.2 Parallel Transport Along a Curve	579
13.3 Geodesics, Exponential Mapping and Normal Coordinates	581
13.4 Covariant Derivative of Tensor Fields	582
13.5 Curvature and Torsion of an Affine Connection, Bianchi Identities	586
13.6 Riemannian Connections	589
13.7 The Cartan Structure Equations	594
13.8 Bianchi Identities for the Curvature and Torsion Forms	598
13.9 Locally Flat Manifolds	602
13.10 Weyl Tensor and Conformally Flat Manifolds	607
14 Some Details	609
14.1 Proofs of Some Theorems	609
14.2 Tangent Bundles	614
14.3 Vector Fields Along Maps	615
14.4 Variations of a Smooth Curve	619
A Fundamental Equations for Hypersurfaces	621
B Ricci Curvature of Warped Products	629
C Frobenius Integrability Theorem	633
D Collection of Important Formulas	643
References	649
Index	659
