

## ACKNOWLEDGEMENT

MICHAEL HOFFMANN, JOHANNES LENHARD and FALK SEEGER /

Grounding Mathematics Education — Michael Otte's contribution

MICHAEL OTTE / Mathematics, Sign and Activity

### A. SIGN PROCESSES

PAUL ERNEST / Agency and Creativity in the Semiotics of Learning Mathematics

SUSANNA MARIETTI / The Semiotic Approach to Mathematical Evidence and Generalization

MICHAEL HOFFMANN / Signs as Means for Discoveries. Peirce and His Concepts of "Diagrammatic Reasoning," "Theorematic Deduction", "Hypostatic Abstraction, and "Theoric Transformation"

WILLIBALD DÖRFLER / Diagrammatic Thinking. Affordances and Constraints

FALK SEEGER / Notes on a Semiotically Inspired Theory of Teaching and Learning

### B. SIGN PROCESSES IN THE MATHEMATICS CLASSROOM

MARIA G. BARTOLINI BUSSI, MARIA ALESSANDRA MARIOTTI AND

FRANCA FERRI / Semiotic Mediation in the Primary School: Dürer's Glass

HEINZ STEINBRING / Do Mathematical Symbols Serve to Describe or Construct Reality? — Epistemological Problems in Teaching Mathematics in the Field of Elementary Algebra

NORMA PRESMEG / Metaphor and Metonymy in Processes of Semiosis in Mathematics Education

ANNA SIERPINSKA / On Practical and Theoretical Thinking and Other False Dichotomies in Mathematics Education

LUIS RADFORD / The Semiotics of the Schema. Kant, Piaget, and the Calculator

### C. MATHEMATICS EDUCATION AS A SCIENCE

KENNETH RUTHVEN / Towards a Normal Science of Mathematics Education?

GUY BROUSSEAU / The Study of the Didactical Conditions of School Learning in Mathematics

ROLAND FISCHER / The Formal, the Social and the Subjective: Variations on a Theme of Michael Otte

### D. CROSSING BOUNDARIES

BERND FICHTNER / Reflective learning — Problems and Questions Concerning a Current Contextualization of the Vygotskian Approach

RAINER BROMME / Thinking and Knowing about knowledge: A Plea for and

Critical Remarks on Psychological Research Programs on Epistemological Beliefs

THOMAS MIES / The Cognitive Unconscious. Recalling the History of the Concept and the Problem

### E. HISTORY OF MATHEMATICS AND MATHEMATICS EDUCATION

HANS NIELS JAHNKE / Hubert, Weyl, and the Philosophy of Mathematics

THOMAS MORMANN / Mathematical Metaphors in Natorp's Neo-Kantian Epistemology and Philosophy of Science

KARL-NORBERT IHMIG / Newton's Program of Mathematizing Nature

MIRCEA RADU / Did Hermann and Robert Graßmann Contribute to the Emergence of a Formal Axiomatics?

GERT SCHUBRING / A Case Study in Generalization; The Notion of Multiplication

CIRCE MARY SILVA DA SILVA DYNNIKOV / Some German Contributions to Mathematics Research in Brazil

### F. MAKING PHILOSOPHY OF MATHEMATICS RELEVANT

ANDREAS DRESS / Data Structures and Virtual Worlds: On the Inventiveness of Mathematics

HERMANN DINGES / Variables, in Particular Random Variables  
JOHANNES LENHARD / Deduction, Perception and Modeling: The Two Peirces on  
the Essence of Mathematics  
C. ULISES MOULINES / Models of Data, Theoretical Models and Ontology: A  
Structuralist Perspective  
MARCO PANZA / Some Sober Conceptions of Mathematical Truth  
JEAN PAUL VAN BENDEGEM / Can There Be an Alternative Mathematics,  
Really?  
C. CODA  
ROLAND FISCHER / An Interview with Michael Otte  
INDEX

Activity and Sign

Grounding Mathematics Education

Hoffmann, M.H.G.; Lenhard, J.; Seeger, F. (Eds.)

2005, VIII, 392 p., Hardcover

ISBN: 978-0-387-24269-9
