### Cochlear signal processing

<b>Mary Ann Cheatham</b>	1
Nonlinearities at the apex of the cochlea: Implications for auditory perception	
<b>Marcel van der Heijden and Philip X. Joris</b>	7
Reconstructing the traveling wave from auditory nerve responses	
<b>Alberto Lopez-Najera, Ray Meddis, and Enrique A. Lopez-Poveda</b>	14
A computational algorithm for computing cochlear frequency selectivity: Further studies	
<b>Roy D. Patterson, Masashi Unoki, and Toshio Irino</b>	21
Comparison of the compressive-gammachirp and double-roex auditory filters	
<b>Mary Florentine, Søren Buus, and Mindy Rosenberg</b>	30
Reaction-time data support the existence of Softness Imperception in cochlear hearing loss	
<b>Michael G. Heinz, Danilo Scepanovic, John Issa, Murray B. Sachs, and Eric D. Young</b>	40
Normal and impaired level encoding: Effects of noise-induced hearing loss on auditory-nerve responses	
<b>Stephen T. Neely, Kim S. Schairer, and Walt Jesteadt</b>	50
Estimates of cochlear compression from measurements of loudness growth	
<b>Christopher J. Plack, Catherine G. O'Hanlon, and Vit Drga</b>	60
Additivity of masking and auditory compression	
<b>Magdalena Wojtczak and Neal F. Viemeister</b>	67
Psychophysical response growth under suppression	

## Brainstem signal processing

- David W. Smith, E. Christopher Kirk, and Emily Buss** 75  
The function(s) of the medial olivocochlear efferent system in hearing
- Katuhiko Maki and Masato Akagi** 84  
A computational model of cochlear nucleus neurons
- Kazuhito Ito and Masato Akagi** 91  
Study on improving regularity of neural phase locking in single neurons of AVCN via a computational model
- Dries H. Louage, Marcel van der Heijden, and Philip X. Joris** 100  
Fibers in the trapezoid body show enhanced synchronization to broadband noise when compared to auditory nerve fibers

## Pitch

- Leonardo Cedolin and Bertrand Delgutte** 107  
Representations of the pitch of complex tones in the auditory nerve
- Lutz Wiegrebe, Alexandra Stein, and Ray Meddis** 117  
Coding of pitch and amplitude modulation in the auditory brainstem: One common mechanism?
- Andrew J. Oxenham, Joshua G. Bernstein, and Christophe Micheyl** 126  
Pitch perception of complex tones within and across ears and frequency regions
- Laurent Demany, Gaspard Montandon, and Catherine Semal** 136  
Internal noise and memory for pitch
- André Rupp, Stefan Uppenkamp, Jen Bailes, Alexander Gutschalk, and Roy D. Patterson** 145  
Time constants in temporal pitch extraction: A comparison of psychophysical and neuromagnetic data
- Bernd Lütkenhöner, Christian Borgmann, Katrin Krumbholz, Stefan Seither, and Annemarie Seither-Preisler** 154  
Auditory processing at the lower limit of pitch studied by magnetoencephalography

## Frequency modulation

- Günter Ehret, Steffen R. Hage, Marina Egorova, and Birgit A. Müller** 162  
Auditory maps in the midbrain: The inferior colliculus

**Craig Atencio, Fabrizio Strata, David Blake, Ben Bonham, Benoit Godey, Michael Merzenich, Christoph Schreiner, and Steven Cheung** 169

Representation of frequency modulation in the primary auditory cortex of New World monkeys

**Pierre L. Divenyi** 176

Frequency change velocity and acceleration detector: A bird or a red herring?

**Robert P. Carlyon, Christophe Micheyl, and John Deeks** 185

Coding of FM and the continuity illusion

## Streaming

**Makio Kashino and Minae Okada** 196

The role of spectral change detectors in sequential grouping of tones

**Christophe Micheyl, Robert P. Carlyon, Rhodri Cusack, and Brian C.J. Moore** 203

Performance measures of auditory organization

**Nicolas Grimault, Sid P. Bacon, and Christophe Micheyl** 212

Auditory streaming without spectral cues in hearing-impaired subjects

## Amplitude modulation

**Neal F. Viemeister, Mark A. Stellmack, and Andrew J. Byrne** 221

The role of temporal structure in envelope processing

**Christian Füllgrabe, Laurent Demany, and Christian Lorenzi** 230

Detecting changes in amplitude-modulation frequency: A test of the concept of excitation pattern in the temporal-envelope domain

**Frederick Gallun, Ervin R. Hafter, and Anne-Marie Bonnel** 237

Modeling the role of duration in intensity increment detection

**Stanley Sheft and William A. Yost** 244

Minimum integration times for processing of amplitude modulation

## Responses to complex sounds

**Ellen Covey and Paul A. Faure** 251

Neural mechanisms for analyzing temporal patterns in echolocating bats

<b>Diana B. Geissler and Günter Ehret</b>	258
Time-critical frequency integration of complex communication sounds in the auditory cortex of the mouse	
<b>Israel Nelken, Nachum Ulanovsky, Liora Las, Omer Bar-Yosef, Michael Anderson, Gal Chechik, Naftali Tishby, and Eric D. Young</b>	265
Transformation of stimulus representations in the ascending auditory system	
<b>Dennis L. Barbour and Xiaoqin Wang</b>	275
AM and FM coherence sensitivity in the auditory cortex as a potential neural mechanism for sound segregation	
<b>Speech</b>	
<b>Fan-Gang Zeng, Kaibao Nie, Ginger Stickney, and Ying-Yee Kong</b>	283
Auditory perception with slowly-varying amplitude and frequency modulations	
<b>Steven J. Eliades and Xiaoqin Wang</b>	292
The role of auditory-vocal interaction in hearing	
<b>Ingrid Johnsrude, Matt Davis, and Alexis Hervais-Adelman</b>	299
From sound to meaning: Hierarchical processing in speech comprehension	
<b>John F. Culling and Julia S. Porter</b>	307
Effects of differences in the accent and gender of competing voices on speech segregation	
<b>Jont B. Allen</b>	314
The Articulation Index is a Shannon channel capacity	
<b>Comodulation masking release</b>	
<b>Ian M. Winter, Veronika Neuert, and Jesko L. Verhey</b>	321
Comodulation masking release and the role of wideband inhibition in the cochlear nucleus	
<b>Georg M. Klump and Sonja B. Hofer</b>	328
The relevance of rate and time cues for CMR in starling auditory forebrain neurons	
<b>Torsten Dau, Stephan D. Ewert, and Andrew J. Oxenham</b>	335
Effects of concurrent and sequential streaming in comodulation masking release	

## Binaural hearing

<b>Ray Meddis, Christian Sumner, and Susan Shore</b>	344
Effects of contralateral sound stimulation on forward masking in the guinea pig	
<b>H. Steven Colburn, Yi Zhou, and Vasant Dasika</b>	355
Inhibition in models of coincidence detection	
<b>Birger Kollmeier and Helmut Riedel</b>	362
What can auditory evoked potentials tell us about binaural processing in humans?	
<b>Trevor M. Shackleton and Alan R. Palmer</b>	370
Sensitivity to changes in interaural time difference and interaural correlation in the inferior colliculus	
<b>Leslie R. Bernstein and Constantine Trahiotis</b>	377
Processing of interaural temporal disparities with both "transposed" and conventional stimuli	
<b>D. Wesley Grantham, Daniel H. Ashmead, and Todd A. Ricketts</b>	390
Sound localization in the frontal horizontal plane by post-lingually deafened adults fitted with bilateral cochlear implants	
<b>Steven van de Par, Armin Kohlrausch, Jeroen Breebaart, and Martin McKinney</b>	398
Discrimination of different temporal envelope structures of diotic and dichotic target signals within diotic wide-band noise	
<b>Courtney C. Lane, Norbert Kopco, Bertrand Delgutte, Barbara G. Shinn-Cunningham, and H. Steven Colburn</b>	405
A cat's cocktail party: Psychophysical, neurophysiological, and computational studies of spatial release from masking	
<b>Brad Rakerd and William M. Hartmann</b>	414
Localization of noise in a reverberant environment	
<b>Anthony J. Watkins</b>	423
Listening in real-room reverberation: Effects of extrinsic context	
<b>Daniel J. Tollin, Micheal L. Dent, and Tom C.T. Yin</b>	429
Psychophysical and physiological studies of the precedence effect and echo threshold in the behaving cat	

<b>Michael A. Akeroyd</b>	436
Some similarities between the temporal resolution and the temporal integration of interaural time differences	
<b>Caroline Witton, Gary G.R. Green, and G. Bruce Henning</b>	443
Binaural “sluggishness” as a function of stimulus bandwidth	
<b>Temporal coding</b>	
<b>Peter Heil and Heinrich Neubauer</b>	454
Auditory thresholds re-visited	
<b>Marjorie Leek, Robert Dooling, Otto Gleich, and Micheal L. Dent</b>	471
Discrimination of temporal fine structure by birds and mammals	
<b>Philip X. Joris, Marcel van der Heijden, Dries H. Louage, Bram Van de Sande, and Cindy Van Kerckhoven</b>	478
Dependence of binaural and cochlear “best delays” on characteristic frequency	
<b>Mounya Elhilali, David J. Klein, Jonathan B. Fritz, Jonathan Z. Simon, and Shihab A. Shamma</b>	485
The enigma of cortical responses: Slow yet precise	
<b>Plasticity</b>	
<b>Jean-Marc Edeline</b>	495
Learning-induced sensory plasticity: Rate code, temporal code, or both?	
<b>Katrina M. MacLeod and Catherine E. Carr</b>	501
Synaptic dynamics and intensity coding in the cochlear nucleus	
<b>Beverly A. Wright and Matthew B. Fitzgerald</b>	510
Learning and generalization on five basic auditory discrimination tasks as assessed by threshold changes	
<b>Subject index</b>	517
<b>Author index</b>	522

Auditory Signal Processing

Physiology, Psychoacoustics, and Models

Pressnitzer, D.; de Cheveigne, A.; McAdams, S.; Collet,  
L. (Eds.)

2005, XIV, 524 p., Hardcover

ISBN: 978-0-387-21915-8
