

Contents

Preface	v
Chapter 1. Spherical Symmetry	1
1.1. A Note on Symmetry Transformations	2
1.2. Rotations in Quantum Mechanics	7
1.3. Angular Momentum	12
1.4. Spherical Symmetry of a Quantum System	17
1.5. The Possible Eigenvalues of Angular-Momentum Operators	21
1.6. Spherical Harmonics	26
1.7. Particle on a Sphere	34
1.8. Quantization on a Sphere	38
1.9. Free Schrödinger Equation in Spherical Coordinates	44
1.10. Spherically Symmetric Potentials	50
Chapter 2. Coulomb Problem	57
2.1. Introduction	58
2.2. The Classical Coulomb Problem	61
2.3. Algebraic Solution Using the Runge-Lenz Vector	66
2.4. Algebraic Solution of the Radial Schrödinger Equation	70
2.5. Direct Solution of the Radial Schrödinger Equation	84
2.6. Special Topic: Parabolic Coordinates	91
2.7. Physical Units and Dilations	96
2.8. Special Topic: Dynamics of Rydberg States	105
Chapter 3. Particles with Spin	113
3.1. Introduction	113
3.2. Classical Theory of the Magnetic Moment	115
3.3. The Stern-Gerlach Experiment	118
3.4. The Spin Operators	123
3.5. Spinor-Wave Functions	127
3.6. The Pauli Equation	134
3.7. Solution in a Homogeneous Magnetic Field	138
3.8. Special Topic: Magnetic Ground States	142
3.9. The Coulomb Problem with Spin	146

Chapter 4. Qubits	157
4.1. States and Observables	158
4.2. Measurement and Preparation	162
4.3. Ensemble Measurements	167
4.4. Qubit Manipulations	171
4.5. Other Qubit Systems	181
4.6. Single-Particle Interference	189
4.7. Quantum Cryptography	197
4.8. Hidden Variables	200
4.9. Special Topic: Qubit Dynamics	204
Chapter 5. Composite Systems	211
5.1. States of Two-Particle Systems	212
5.2. Hilbert Space of a Bipartite System	216
5.3. Interacting Particles	221
5.4. Observables of a Bipartite System	223
5.5. The Density Operator	227
5.6. Pure and Mixed States	233
5.7. Preparation of Mixed States	238
5.8. More About Bipartite Systems	244
5.9. Indistinguishable Particles	250
5.10. Special Topic: Multiparticle Systems with Spin	256
5.11. Special Topic: Addition of Angular Momenta	259
Chapter 6. Quantum Information Theory	271
6.1. Entangled States of Two-Qubit Systems	272
6.2. Local and Nonlocal	278
6.3. The Einstein-Podolsky-Rosen Paradox	281
6.4. Correlations Arising from Entangled States	285
6.5. Bell Inequalities and Local Hidden Variables	290
6.6. Entanglement-Assisted Communication	300
6.7. Quantum Computers	305
6.8. Logic Gates	307
6.9. Quantum Algorithms	316
Chapter 7. Relativistic Systems in One Dimension	323
7.1. Introduction	324
7.2. The Free Dirac Equation	325
7.3. Dirac Spinors and State Space	327
7.4. Plane Waves and Wave Packets	332
7.5. Subspaces with Positive and Negative Energies	339
7.6. Kinematics of Wave Packets	343
7.7. Zitterbewegung	347

7.8. Special Topic: Energy Representation and Velocity Space	359
7.9. Relativistic Invariance	365
Chapter 8. The Dirac Equation	377
8.1. The Dirac Equation	378
8.2. Relativistic Covariance	382
8.3. Classification of External Fields	389
8.4. Positive and Negative Energies	392
8.5. Nonrelativistic Limit and Relativistic Corrections	402
8.6. Spherical Symmetry	410
8.7. The Dirac-Coulomb Problem	417
8.8. Relativistic Hydrogen Atom	426
Appendix A. Synopsis of Quantum Mechanics	433
Appendix B. Perturbation of Eigenvalues	443
Appendix C. Special Topic: Analytic Perturbation Theory	455
Appendix D. Variational Method	461
Appendix E. Adiabatic and Geometric Phases	467
Appendix F. Formal Scattering Theory	475
Appendix G. Books	491
Appendix H. Movie Index	493
0. Introduction	493
1. Spherical Symmetry	494
2. Coulomb Problem	495
3. Spin	498
4. Qubits	499
5. Composite Systems	500
6. Relativistic Systems	501
List of Symbols	505
Index	511

Advanced Visual Quantum Mechanics

Thaller, B.

2005, XIV, 518 p. 103 illus., Hardcover

ISBN: 978-0-387-20777-3
