	Preface	V
	Outline of Contents	XVII
	Notation and Symbols	XXI
1	Introductory Measure Theory	1
1	Probability Theory: An Introduction	1
2	Basics from Measure Theory	2
2.1	Sets	3
2.2	Collections of Sets	5
2.3	Generators	7
2.4	A Metatheorem and Some Consequences	9
3	The Probability Space	10
3.1	Limits and Completeness	11
3.2	An Approximation Lemma	13
3.3	The Borel Sets on \mathbb{R}	14
3.4	The Borel Sets on \mathbb{R}^n	16
4	Independence; Conditional Probabilities	16
4.1	The Law of Total Probability; Bayes' Formula	17
4.2	Independence of Collections of Events	18
4.3	Pair-wise Independence	19
5	The Kolmogorov Zero-one Law	20
6	Problems	22
2	Random Variables	25
1	Definition and Basic Properties	25
1.1	Functions of Random Variables	28
2	Distributions	30
2.1	Distribution Functions	30
2.2	Integration: A Preview	32

2.3	Decomposition of Distributions	36
2.4	Some Standard Discrete Distributions	39
2.5	Some Standard Absolutely Continuous Distributions	40
2.6	The Cantor Distribution	40
2.7	Two Perverse Examples	42
3	Random Vectors; Random Elements	43
3.1	Random Vectors	43
3.2	Random Elements	45
4	Expectation; Definitions and Basics	46
4.1	Definitions	46
4.2	Basic Properties	48
5	Expectation; Convergence	54
6	Indefinite Expectations	58
7	A Change of Variables Formula	60
8	Moments, Mean, Variance	62
9	Product Spaces; Fubini's Theorem	64
9.1	Finite-dimensional Product Measures	64
9.2	Fubini's Theorem	65
9.3	Partial Integration	66
9.4	The Convolution Formula	67
10	Independence	68
10.1	Independence of Functions of Random Variables	71
10.2	Independence of σ -Algebras	71
10.3	Pair-wise Independence	71
10.4	The Kolmogorov Zero-one Law Revisited	72
11	The Cantor Distribution	73
12	Tail Probabilities and Moments	74
13	Conditional Distributions	79
14	Distributions with Random Parameters	81
15	Sums of a Random Number of Random Variables	83
15.1	Applications	85
16	Random Walks; Renewal Theory	88
16.1	Random Walks	88
16.2	Renewal Theory	89
16.3	Renewal Theory for Random Walks	90
16.4	The Likelihood Ratio Test	91
16.5	Sequential Analysis	91
16.6	Replacement Based on Age	92
17	Extremes; Records	93
17.1	Extremes	93
17.2	Records	93
18	Borel-Cantelli Lemmas	96
18.1	The Borel-Cantelli Lemmas 1 and 2	96
18.2	Some (Very) Elementary Examples	98
18.3	Records	101

18.4	Recurrence and Transience of Simple Random Walks . . .	102
18.5	$\sum_{n=1}^{\infty} P(A_n) = \infty$ and $P(A_n \text{ i.o.}) = 0$	104
18.6	Pair-wise Independence	104
18.7	Generalizations Without Independence	105
18.8	Extremes	107
18.9	Further Generalizations	109
19	A Convolution Table	113
20	Problems	114
3	Inequalities	119
1	Tail Probabilities Estimated via Moments	119
2	Moment Inequalities	127
3	Covariance; Correlation	130
4	Interlude on L^p -spaces	131
5	Convexity	132
6	Symmetrization	133
7	Probability Inequalities for Maxima	138
8	The Marcinkiewics-Zygmund Inequalities	146
9	Rosenthal's Inequality	151
10	Problems	153
4	Characteristic Functions	157
1	Definition and Basics	157
1.1	Uniqueness; Inversion	159
1.2	Multiplication	164
1.3	Some Further Results	165
2	Some Special Examples	166
2.1	The Cantor Distribution	166
2.2	The Convolution Table Revisited	168
2.3	The Cauchy Distribution	170
2.4	Symmetric Stable Distributions	171
2.5	Parseval's Relation	172
3	Two Surprises	173
4	Refinements	175
5	Characteristic Functions of Random Vectors	180
5.1	The Multivariate Normal Distribution	180
5.2	The Mean and the Sample Variance Are Independent . . .	183
6	The Cumulant Generating Function	184
7	The Probability Generating Function	186
7.1	Random Vectors	188
8	The Moment Generating Function	189
8.1	Random Vectors	191
8.2	Two Boundary Cases	191
9	Sums of a Random Number of Random Variables	192
10	The Moment Problem	194

10.1	The Moment Problem for Random Sums	196
11	Problems	197
5	Convergence	201
1	Definitions	202
1.1	Continuity Points and Continuity Sets	203
1.2	Measurability	205
1.3	Some Examples	206
2	Uniqueness	207
3	Relations Between Convergence Concepts	209
3.1	Converses	212
4	Uniform Integrability	214
5	Convergence of Moments	218
5.1	Almost Sure Convergence	218
5.2	Convergence in Probability	220
5.3	Convergence in Distribution	222
6	Distributional Convergence Revisited	225
6.1	Scheffé's Lemma	226
7	A Subsequence Principle	229
8	Vague Convergence; Helly's Theorem	230
8.1	Vague Convergence	231
8.2	Helly's Selection Principle	232
8.3	Vague Convergence and Tightness	234
8.4	The Method of Moments	237
9	Continuity Theorems	238
9.1	The Characteristic Function	238
9.2	The Cumulant Generating Function	240
9.3	The (Probability) Generating Function	241
9.4	The Moment Generating Function	242
10	Convergence of Functions of Random Variables	243
10.1	The Continuous Mapping Theorem	245
11	Convergence of Sums of Sequences	247
11.1	Applications	249
11.2	Converses	252
11.3	Symmetrization and Desymmetrization	255
12	Cauchy Convergence	256
13	Skorohod's Representation Theorem	258
14	Problems	260
6	The Law of Large Numbers	265
1	Preliminaries	266
1.1	Convergence Equivalence	266
1.2	Distributional Equivalence	267
1.3	Sums and Maxima	268
1.4	Moments and Tails	268

2	A Weak Law for Partial Maxima.....	269
3	The Weak Law of Large Numbers.....	270
3.1	Two Applications	276
4	A Weak Law Without Finite Mean.....	278
4.1	The St. Petersburg Game	283
5	Convergence of Series	284
5.1	The Kolmogorov Convergence Criterion	286
5.2	A Preliminary Strong Law.....	288
5.3	The Kolmogorov Three-series Theorem.....	289
5.4	Lévy's Theorem on the Convergence of Series	292
6	The Strong Law of Large Numbers	294
7	The Marcinkiewicz-Zygmund Strong Law	298
8	Randomly Indexed Sequences	301
9	Applications	305
9.1	Normal Numbers	305
9.2	The Glivenko-Cantelli Theorem	306
9.3	Renewal Theory for Random Walks.....	306
9.4	Records	307
10	Uniform Integrability; Moment Convergence.....	309
11	Complete Convergence	311
11.1	The Hsu-Robbins-Erdős Strong Law	312
11.2	Complete Convergence and the Strong Law	314
12	Some Additional Results and Remarks.....	315
12.1	Convergence Rates	315
12.2	Counting Variables	320
12.3	The Case $r = p$ Revisited.....	321
12.4	Random Indices	322
13	Problems	323
7	The Central Limit Theorem	329
1	The i.i.d. Case.....	330
2	The Lindeberg-Lévy-Feller Theorem.....	330
2.1	Lyapounov's Condition.....	339
2.2	Remarks and Complements	340
2.3	Pair-wise Independence	343
2.4	The Central Limit Theorem for Arrays.....	344
3	Anscombe's Theorem.....	345
4	Applications	348
4.1	The Delta Method.....	349
4.2	Stirling's Formula	350
4.3	Renewal Theory for Random Walks.....	350
4.4	Records	351
5	Uniform Integrability; Moment Convergence.....	352
6	Remainder Term Estimates	354
6.1	The Berry-Esseen Theorem	355

6.2	Proof of the Berry-Esseen Theorem 6.2.....	357
7	Some Additional Results and Remarks.....	362
7.1	Rates of Rates	362
7.2	Non-uniform Estimates	363
7.3	Renewal Theory.....	364
7.4	Records	364
7.5	Local Limit Theorems	365
7.6	Large Deviations	365
7.7	Convergence Rates	366
7.8	Precise Asymptotics	371
7.9	A Short Outlook on Extensions	374
8	Problems	376
8	The Law of the Iterated Logarithm	383
1	The Kolmogorov and Hartman-Wintner LILs.....	384
1.1	Outline of Proof.....	385
2	Exponential Bounds.....	385
3	Proof of the Hartman-Wintner Theorem	387
4	Proof of the Converse	396
5	The LIL for Subsequences.....	398
5.1	A Borel-Cantelli Sum for Subsequences	401
5.2	Proof of Theorem 5.2	402
5.3	Examples	404
6	Cluster Sets	404
6.1	Proofs	406
7	Some Additional Results and Remarks.....	412
7.1	Hartman-Wintner via Berry-Esseen	412
7.2	Examples Not Covered by Theorems 5.2 and 5.1	413
7.3	Further Remarks on Sparse Subsequences	414
7.4	An Anscombe LIL	416
7.5	Renewal Theory for Random Walks.....	417
7.6	Record Times.....	417
7.7	Convergence Rates	418
7.8	Precise Asymptotics	419
7.9	The Other LIL.....	419
8	Problems	420
9	Limit Theorems; Extensions and Generalizations	423
1	Stable Distributions	424
2	The Convergence to Types Theorem	427
3	Domains of Attraction.....	430
3.1	Sketch of Preliminary Steps.....	433
3.2	Proof of Theorems 3.2 and 3.3	435
3.3	Two Examples	438
3.4	Two Variations	439

3.5	Additional Results	440
4	Infinitely Divisible Distributions	442
5	Sums of Dependent Random Variables	448
6	Convergence of Extremes	451
6.1	Max-stable and Extremal Distributions	451
6.2	Domains of Attraction	456
6.3	Record Values	457
7	The Stein-Chen Method	459
8	Problems	464
10	Martingales	467
1	Conditional Expectation	468
1.1	Properties of Conditional Expectation	471
1.2	Smoothing	474
1.3	The Rao-Blackwell Theorem	475
1.4	Conditional Moment Inequalities	476
2	Martingale Definitions	477
2.1	The Defining Relation	479
2.2	Two Equivalent Definitions	479
3	Examples	481
4	Orthogonality	487
5	Decompositions	489
6	Stopping Times	491
7	Doob's Optional Sampling Theorem	495
8	Joining and Stopping Martingales	497
9	Martingale Inequalities	501
10	Convergence	508
10.1	Garsia's Proof	508
10.2	The Upcrossings Proof	511
10.3	Some Remarks on Additional Proofs	513
10.4	Some Questions	514
10.5	A Non-convergent Martingale	515
10.6	A Central Limit Theorem?	515
11	The Martingale $\{E(Z \mid \mathcal{F}_n)\}$	515
12	Regular Martingales and Submartingales	516
12.1	A Main Martingale Theorem	517
12.2	A Main Submartingale Theorem	518
12.3	Two Non-regular Martingales	519
12.4	Regular Martingales Revisited	519
13	The Kolmogorov Zero-one Law	520
14	Stopped Random Walks	521
14.1	Finiteness of Moments	521
14.2	The Wald Equations	522
14.3	Tossing a Coin Until Success	525
14.4	The Gambler's Ruin Problem	526

14.5	A Converse	529
15	Regularity	531
15.1	First Passage Times for Random Walks	535
15.2	Complements	537
15.3	The Wald Fundamental Identity.....	538
16	Reversed Martingales and Submartingales.....	541
16.1	The Law of Large Numbers.....	544
16.2	U -statistics	547
17	Problems	548
A	Some Useful Mathematics	555
1	Taylor Expansion	555
2	Mill's Ratio	558
3	Sums and Integrals.....	559
4	Sums and Products	560
5	Convexity; Clarkson's Inequality	561
6	Convergence of (Weighted) Averages	564
7	Regularly and Slowly Varying Functions	566
8	Cauchy's Functional Equation	568
9	Functions and Dense Sets	570
	References	577
	Index	589
