Foreword.....	V
Preface.....	VII
Acknowledgments.....	XI

Chapter 1: The Psychological Basis of Cognitive Modeling

1.1	Introduction.....	1
1.2	Cognitive Models of Pattern Recognition.....	3
1.2.1	Template-Matching Theory.....	3
1.2.2	Prototype-Matching Theory.....	4
1.2.3	Feature-Based Approach for Pattern Recognition.....	4
1.2.4	The Computational Approach.....	5
1.3	Cognitive Models of Memory.....	6
1.3.1	Atkinson-Shiffrin's Model.....	6
1.3.2	Debates on Atkinson-Shiffrin's Model.....	8
1.3.3	Tulving's Model.....	8
1.3.4	The Parallel Distributed Processing Approach.....	11
1.4	Mental Imagery	
1.4.1	Mental Representation of Imagery.....	12
1.4.2	Rotation of Mental Imagery.....	12
1.4.3	Imagery and Size.....	13
1.4.4	Imagery and Shape.....	14
1.4.5	Part-Whole Relationship in Mental Imagery.....	14
1.4.6	Ambiguity in Mental Imagery.....	15
1.4.7	Neurophysiological Similarity between Imagery and Perception.....	15
1.4.8	Cognitive Maps of Mental Imagery.....	15
1.5	Understanding a Problem.....	17
1.5.1	Steps in Understanding a Problem.....	18
1.6	A Cybernetic View of Cognition.....	19
1.6.1	The States of Cognition.....	20
1.7	Computational Modeling of Cognitive Systems.....	24
1.8	Petri Nets: A Brief Review.....	25
1.9	Extension of Petri Net Models for Distributed Modeling of Cognition.....	29
1.10	Scope of the Book.....	31
1.11	Summary.....	31
	Exercises.....	32
	References.....	35

Chapter 2: Parallel and Distributed Logic Programming

2.1	Introduction.....	39
2.2	Formal Definitions.....	41

2.2.1 Preliminary Definitions.....	41
2.2.2 Properties of the Substitution Set.....	45
2.2.3 SLD Resolution.....	47
2.3 Concurrency in Resolution.....	52
2.3.1 Preliminary Definitions.....	52
2.3.2 Types of Concurrent Resolution.....	55
2.4 Petri Net Model for Concurrent Resolution.....	61
2.4.1 Extended Petri Net.....	61
2.4.2 Algorithm for Concurrent Resolution.....	63
2.5 Performance Analysis of Petri Net-Based Models.....	67
2.5.1 The Speed-up.....	67
2.5.2 The Resource Utilization Rate.....	68
2.5.3 Resource Unlimited Speed-up and Utilization Rate.....	69
2.6 Conclusions.....	70
Exercises.....	70
References.....	82

Chapter 3: Distributed Reasoning by Fuzzy Petri Nets: A Review

3.1 Fuzzy Logic and Approximate Reasoning.....	85
3.2 Structured Models of Approximate Reasoning.....	87
3.3 Looney's Model.....	89
3.4 The Model Proposed by Chen et al.....	91
3.5 Konar and Mandal's Model.....	93
3.6 Yu's Model.....	97
3.7 Chen's Model for Backward Reasoning.....	100
3.8 Bugarin and Barro's Model.....	102
3.9 Pedrycz and Gomide's Learning Model.....	107
3.10 Construction of Reduction Rules Using FPN.....	110
3.11 Scope of Extension of Fuzzy Reasoning on Petri Nets.....	115
3.12 Summary.....	116
Exercises.....	117
References.....	121

Chapter 4: Belief Propagation and Belief Revision Models in Fuzzy Petri Nets

4.1 Introduction.....	123
4.2 Imprecision Management in an Acyclic FPN.....	125
4.2.1 Formal Definitions and the Proposed Model.....	126
4.2.2 Proposed Model for Belief Propagation.....	126
4.2.3 Proposed Algorithm for Belief Propagation.....	128
4.2.4 Properties of FPN and Belief Propagation Scheme.....	132
4.3 Imprecision and Inconsistency Management in a Cyclic FPN.....	134

4.3.1 Proposed Model for Belief Revision.....	134
4.3.2 Stability Analysis of the Belief Revision Model.....	135
4.3.3 Detection and Elimination of Limit Cycles.....	141
4.3.4 Nonmonotonic Reasoning in an FPN.....	144
4.4 Conclusions.....	147
Exercises.....	148
References.....	151

Chapter 5: Building Expert Systems Using Fuzzy Petri Nets

5.1 Introduction.....	153
5.2 The Database.....	155
5.2.1 The Data-tree.....	155
5.3 The Knowledge Base.....	157
5.4 The Inference Engine.....	160
5.4.1 Searching Antecedent Parts of PR in the Data-tree.....	160
5.4.2 Formation of the FPN.....	162
5.4.3 Decision Making and Explanation Tracing.....	163
5.5 A Case Study.....	163
5.6 Performance Evaluation.....	166
5.6.1 Time-Complexity for the Default-Data-Tree-Formation Procedure.....	166
5.6.2 Time-Complexity for the Procedure Suspect-Identification...	167
5.6.3 Time-Complexity for the Procedure Variable-Instantiation- of-PRs.....	168
5.6.4 Time-Complexity for the Procedure Create-tree.....	169
5.6.5 Time-Complexity for the Procedure Search-on-Data-Tree.....	170
5.6.6 Time-Complexity for the Procedure FPN-Formation.....	171
5.6.7 Time-Complexity for the Belief-Revision and Limit-Cycle- Detection Procedure.....	173
5.6.8 Time-Complexity Analysis for the Procedure Limit-Cycle-Elimination	174
5.6.9 Time-Complexity for the Procedure Nonmonotonic Reasoning.....	175
5.6.10 Time-Complexity for the Procedure Decision-Making and Explanation Tracing.....	176
5.6.11 Time-Complexity of the Overall Expert System.....	177
5.7 Conclusions.....	178
Exercises.....	178
References.....	179

Chapter 6: Distributed Learning Using Fuzzy Cognitive Maps

6.1 Introduction.....	181
6.2 Axelord's Cognitive Maps.....	182

6.3	Kosko's Model.....	184
6.4	Kosko's Extended Model.....	187
6.5	Adaptive FCMs.....	188
6.6	Zhang, Chen, and Bezdek's Model.....	189
6.7	Pal and Konar's FCM Model.....	191
6.8	Conclusions.....	197
	Exercises.....	197
	References.....	201

Chapter 7: Unsupervised Learning by Fuzzy Petri Nets

7.1	Introduction.....	205
7.2	The Proposed Model for Cognitive Learning.....	206
	7.2.1 Encoding of Weights.....	208
	7.2.2 The Recall Model.....	208
7.3	State-Space Formulation.....	210
	7.3.1 State-Space Model for Belief Updating.....	211
	7.3.2 State-Space Model for FTT Updating of Transitions.....	211
	7.3.3 State-Space Model for Weights	212
7.4	Stability Analysis of the Cognitive Model.....	212
7.5	Computer Simulation.....	216
7.6	Implication of the Results.....	219
7.7	Knowledge Refinement by Hebbian Learning.....	219
	7.7.1 The Encoding Model.....	219
	7.7.2 The Recall/Reasoning Model.....	221
	7.7.3 Case Study by Computer Simulation.....	221
	7.7.4 Implication of the Results.....	226
7.8	Conclusions.....	226
	Exercises.....	228
	References.....	229

Chapter 8: Supervised Learning by a Fuzzy Petri Net

8.1	Introduction.....	233
8.2	Proposed Model of Fuzzy Petri Nets.....	234
	8.2.1 State-Space Formulation.....	236
8.3	Algorithm for Training.....	238
8.4	Analysis of Convergence.....	243
8.5	Application in Fuzzy Pattern Recognition.....	245
8.6	Conclusions.....	252
	Exercises.....	252
	References.....	253

Chapter 9: Distributed Modeling of Abduction, Reciprocity, and Duality by Fuzzy Petri Nets

9.1	Introduction.....	257
9.2	Formal Definitions.....	259
9.3	State-Space Formulation of the Proposed FPN Model.....	262
	9.3.1 The Behavioral Model of FPN.....	263
	9.3.2 State-Space Formulation of the Model.....	265
	9.3.3 Special Cases of the Model.....	266
9.4	Stability Analysis.....	269
9.5	Forward Reasoning in FPNs.....	272
9.6	Abductive Reasoning in FPN.....	274
9.7	Bi-directional Reasoning in an FPN.....	279
9.8	Fuzzy Modus Tollens and Duality.....	288
9.9	Conclusions.....	291
	Exercises.....	292
	References.....	293

Chapter 10: Human Mood Detection and Control: A Cybernetic Approach

10.1	Introduction.....	297
10.2	Filtering, Segmentation and Localization of Facial Components....	299
	10.2.1 Segmentation of the Mouth Region.....	300
	10.2.2 Segmentation of the Eye Region.....	302
	10.2.3 Segmentation of Eyebrow Constriction.....	303
10.3	Determination of Facial Attributes.....	303
	10.3.1 Determination of the Mouth-Opening.....	303
	10.3.2 Determination of the Eye-Opening.....	304
	10.3.3 Determination of the Length of Eyebrow-Constriction.....	305
10.4	Fuzzy Relational Model for Mood Detection.....	306
	10.4.1 Fuzzification of Facial Attributes.....	306
	10.4.2 The Fuzzy Relational Model for Mood Detection.....	307
10.5	Validation of System Performance.....	309
10.6	A Basic Scheme of Human Mood Control.....	310
10.7	A Simple Model of Human Mood Transition Dynamics.....	311
	10.7.1 The Model.....	312
	10.7.2 Properties of the Model.....	315
10.8	The Proportional Model of Human Mood Control.....	317
10.9	Mamdani's Model for Mood Control.....	318
10.10	Ranking the Music, Audio, and Video Clips.....	326
10.11	Experimental Results.....	327
10.12	Conclusions.....	328
	Exercises.....	328
	References.....	329

Chapter 11: Distributed Planning and Multi-agent Coordination of Robots

11.1 Introduction.....	331
11.2 Single-Agent Planning.....	333
11.3 Multi-Agent Planning.....	336
11.3.1 Task Sharing and Distribution in Multi-agent Planning.....	336
11.3.2 Cooperation with/without Communication.....	336
11.3.3 Homogeneous and Heterogeneous Distributed Planning.....	338
11.4 Vision-based Transportation of Blocks by Two Robots.....	339
11.5 Experimental Results.....	341
11.6 Timing Analysis of the Transportation Problem.....	343
11.6.1 Analysis with Two agents.....	343
11.6.2 Analysis with <i>l</i> -agents.....	345
11.7 Conclusions.....	347
Exercises.....	347
References.....	348
Index.....	351
