<b>Preface .....</b>	<b>vii</b>
<b>General Notation and Acronyms .....</b>	<b>xvii</b>
<b>1. Basic Tools and Techniques.....</b>	<b>1</b>
1.1 Moment-generating Function and $z$ -transform.....	1
1.2 Mathematical Fundamentals of the Universal Generating Function .....	6
1.2.1 Definition of the Universal Generating Function .....	6
1.2.2 Properties of Composition Operators .....	11
1.3 Introduction to Genetic Algorithms .....	14
1.3.1 Structure of Steady-state Genetic Algorithms .....	17
1.3.2 Adaptation of Genetic Algorithms to Specific Optimization Problems .....	20
1.3.2.1 Parameter Determination Problems .....	21
1.3.2.2 Partition and Allocation Problems .....	22
1.3.2.3 Mixed Partition and Parameter Determination Problems.....	24
1.3.2.4 Sequencing Problems.....	26
1.3.2.5 Determination of Solution Fitness .....	26
1.3.2.6 Basic Genetic Algorithm Procedures and Parameters .....	28
<b>2. The Universal Generating Function in Reliability Analysis of Binary Systems.....</b>	<b>29</b>
2.1 Basic Notions of Binary System Reliability .....	29
2.2 $k$ -out-of- $n$ Systems .....	40
2.3 Consecutive $k$ -out-of- $n$ Systems.....	47
2.3.1 Consecutive $k$ -out-of- $n$ Systems with Identical Elements.....	49
2.3.2 Consecutive $k$ -out-of- $n$ Systems with Different Elements .....	53
2.4 Consecutive $k$ -out-of- $r$ -from- $n$ Systems .....	58
<b>3. Introduction to Multi-state Systems .....</b>	<b>67</b>
3.1 Main Definitions and Models.....	67
3.1.1 Basic Concepts of Multi-state Systems .....	67
3.1.2 Generic Multi-state System Model.....	69
3.1.3 Acceptability Function .....	72
3.2 Types of Multi-state System .....	74
3.2.1 Series Structure.....	74

3.2.2	Parallel Structure .....	76
3.2.3	$k$ -out-of- $n$ Structure .....	78
3.2.4	Bridge Structure .....	79
3.2.5	Systems with Two Failure Modes .....	81
3.2.6	Weighted Voting Systems .....	82
3.2.7	Multi-state Sliding Window Systems .....	84
3.2.8	Multi-state Consecutively Connected Systems .....	85
3.2.9	Multi-state Networks .....	87
3.2.10	Fault-tolerant Software Systems .....	90
3.3	Measures of Multi-state System Performance and their Evaluation Using the Universal Generating Function .....	92
<b>4.</b>	<b>Universal Generating Function in Analysis of Series-Parallel Multi-state System .....</b>	<b>99</b>
4.1	Reliability Block Diagram Method .....	99
4.1.1	Series Systems .....	100
4.1.2	Parallel Systems .....	102
4.1.3	Series-Parallel Systems .....	105
4.1.4	Series-Parallel Multi-state Systems Reducible to Binary Systems .....	112
4.2	Controllable Series-parallel Multi-state Systems .....	115
4.2.1	Systems with Identical Elements in the Main Producing System .....	117
4.2.2	Systems with Different Elements in the Main Producing System .....	118
4.3	Multi-state Systems with Dependent Elements .....	125
4.3.1	$u$ -functions of Dependent Elements .....	125
4.3.2	$u$ -functions of a Group of Dependent Elements .....	128
4.3.3	$u$ -functions of Multi-state Systems with Dependent Elements .....	131
4.4	Common Cause Failures in Multi-state Systems .....	138
4.4.1	Incorporating Common Cause Failures into Multi-state System Reliability Analysis .....	138
4.4.2	Multi-state Systems with Total Common Cause Failures .....	147
4.4.3	Multi-state Systems with Nested Common Cause Groups .....	150
4.5	Importance Analysis in Multi-state Systems .....	160
4.5.1	Reliability Importance of Two-state Elements in Multi-state Systems .....	161
4.5.2	Importance of Common Cause Group Reliability .....	167
4.5.3	Reliability Importance of Multi-state Elements in Multi-state Systems .....	172
4.5.3.1	Extension of Importance Measures to Multi-state Elements .....	173
4.5.3.2	State-space Reachability Restriction Approach .....	174
4.5.3.3	Performance Level Limitation Approach .....	176
4.5.3.4	Evaluating System Performance Measures .....	178
4.6	Universal Generating Function in Analysis of Continuum-state Systems .....	185

<b>5. Universal Generating Function in Optimization of Series-Parallel Multi-state Systems.....</b>	<b>191</b>
5.1 Structure Optimization Problems .....	192
5.1.1 Optimal Structure of Systems with Identical Elements in Each Component.....	192
5.1.1.1 Problem Formulation .....	192
5.1.1.2 Implementing the Genetic Algorithm .....	193
5.1.2 Optimal Structure of Systems with Different Elements in Each Component.....	196
5.1.2.1 Problem Formulation .....	196
5.1.2.2 Implementing the Genetic Algorithm .....	197
5.1.3 Optimal Single-stage System Expansion.....	199
5.1.4 Optimal Multistage System Expansion .....	200
5.1.4.1 Problem Formulation .....	201
5.1.4.2 Implementing the Genetic Algorithm .....	202
5.1.5 Optimal Structure of Controllable Systems.....	205
5.2 Structure Optimization in the Presence of Common Cause Failures...	207
5.2.1 Optimal Separation of System Elements .....	208
5.2.1.1 Problem Formulation .....	208
5.2.1.2 Implementing the Genetic Algorithm .....	209
5.2.2 Optimal System Structure in the Presence of Common Cause Failures.....	213
5.2.2.1 Problem Formulation .....	213
5.2.2.2 Implementing the Genetic Algorithm .....	214
5.2.3 Optimal Multilevel Protection .....	219
5.2.3.1 Problem Formulation .....	219
5.2.3.2 Implementing the Genetic Algorithm .....	220
5.2.4 Optimal Structure of System with Multilevel Protection .....	223
5.2.4.1 Problem Formulation .....	224
5.2.4.2 Implementing the Genetic Algorithm .....	226
5.3 Optimal Reliability Enhancement of Multi-state System Elements ....	232
5.3.1 Optimization of Multi-state System Reliability Growth Testing .....	233
5.3.1.1 Problem Formulation .....	234
5.3.1.2 Implementing the Genetic Algorithm .....	235
5.3.2 Optimization of Cyclic Replacement of Multi-state System Elements .....	239
5.3.2.1 Problem Formulation .....	240
5.3.2.2 Implementing the Genetic Algorithm .....	241
5.3.3 Joint Redundancy and Cyclic Replacement Optimization .....	245
5.3.3.1 Problem Formulation .....	245
5.3.3.2 Implementing the Genetic Algorithm .....	247
5.3.4 Optimal Multistage System Modernization.....	250
5.3.4.1 Problem Formulation .....	250
5.3.4.2 Implementing the Genetic Algorithm .....	252
5.3.5 Optimal Imperfect Maintenance .....	255
5.3.5.1 Element Age Reduction Model.....	256

5.3.5.2	Problem Formulation .....	257
5.3.5.3	Implementing the Genetic Algorithm .....	258
<b>6.</b>	<b>UGF in Analysis and Optimization of Special Types of</b>	
	<b>Multi-state System .....</b>	<b>263</b>
6.1	Multi-state Systems with Bridge Structure .....	263
6.1.1	$u$ -function of Bridge Systems.....	264
6.1.1.1	Flow Transmission Multi-state Systems.....	264
6.1.1.2	Task Processing Multi-state Systems .....	265
6.1.1.3	Simplification Technique.....	267
6.1.2	Structure Optimization of Bridge Systems .....	269
6.1.2.1	Constrained Structure Optimization Problems .....	269
6.1.2.2	Structure Optimization in the Presence of Common Cause Failures.....	277
6.2	Multi-state Systems with Two Failure Modes .....	282
6.2.1	Flow Transmission Multi-state Systems .....	284
6.2.2	Task Processing Multi-state Systems .....	285
6.2.3	Structure Optimization of Systems with Two Failure Modes .....	292
6.2.3.1	Problem Formulation .....	292
6.2.3.2	Implementing the Genetic Algorithm .....	293
6.2.4	Optimal Topology of Systems with Two Failure Modes .....	295
6.2.4.1	Problem Formulation .....	295
6.2.4.2	Implementing the Genetic Algorithm .....	295
6.3	Weighted Voting Systems.....	301
6.3.1	Evaluating the Weighted Voting System Reliability.....	302
6.3.1.1	Universal Generating Function Technique for Weighted Voting System Reliability Evaluation....	303
6.3.1.2	Simplification Technique.....	306
6.3.2	Optimization of Weighted Voting System Reliability .....	308
6.3.2.1	Implementing the Genetic Algorithm .....	308
6.3.3	Weighted Voting System Consisting of Voting Units with Limited Availability .....	310
6.3.4	Optimization of Weighted Voting Systems in the Presence of Common Cause Failures .....	316
6.3.4.1	Problem formulation .....	316
6.3.4.2	Evaluating the Survivability of Weighted Voting System with Separated Common Cause Groups .....	317
6.3.4.3	Implementing the Genetic Algorithm .....	318
6.3.5	Asymmetric Weighted Voting Systems .....	320
6.3.5.1	Evaluating the Reliability of Asymmetric Weighted Voting Systems.....	320
6.3.5.2	Optimization of Asymmetric Weighted Voting Systems .....	323
6.3.6	Weighted Voting Systems Decision-making Time .....	325
6.3.6.1	Determination of Weighted Voting System Decision Time Distribution .....	325
6.3.6.2	Weighted Voting Systems Reliability Optimization Subject to Decision-time Constraint.....	329

6.3.7	Weighted Voting Classifiers.....	330
6.4	Sliding Window Systems .....	337
6.4.1	Evaluating the Reliability of the Sliding Window Systems ...	338
6.4.1.1	Implementing the Universal Generating Function ..	338
6.4.1.2	Simplification Technique.....	341
6.4.2	Multiple Sliding Window Systems.....	345
6.4.2.1	Evaluating the Multiple Sliding Window System Reliability.....	348
6.4.3	Element Reliability Importance in Sliding Window Systems.....	352
6.4.4	Optimal Element Sequencing in Sliding Window Systems ...	354
6.4.4.1	Implementing the Genetic Algorithm.....	354
6.4.5	Optimal Uneven Element Allocation in Sliding Window Systems.....	356
6.4.6	Sliding Window System Reliability Optimization in the Presence of Common Cause Failures .....	360
6.4.6.1	Evaluating Sliding Window System Reliability in the Presence of Common Cause Failures .....	361
6.4.6.2	Optimal Distribution of Multi-state Element Among Common Cause Groups.....	362
<b>7.</b>	<b>Universal Generating Function in Analysis and Optimization of Consecutively Connected Systems and Networks .....</b>	<b>365</b>
7.1	Multi-state Consecutively Connected Systems.....	365
7.1.1	Connectivity Model .....	365
7.1.2	Retransmission Delay Model.....	371
7.1.2.1	Evaluating System Reliability and Conditional Expected Delay .....	371
7.1.2.2	Simplification Technique.....	374
7.1.3	Optimal Element Allocation in Linear Multi-state Consecutively Connected Systems.....	377
7.1.3.1	Connectivity Model .....	378
7.1.3.2	Retransmission Delay Model.....	379
7.1.3.3	Optimal Element Allocation in the Presence of Common Cause Failures .....	382
7.2	Multi-state Networks.....	386
7.2.1	Connectivity Model .....	386
7.2.2	Model with Constant Transmission Characteristics of Arcs.....	391
7.2.2.1	Minimal Transmission Time Multi-state Acyclic Networks.....	395
7.2.2.2	Maximal Flow Path Multi-state Acyclic Networks.....	396
7.2.3	Optimal Element Allocation in a Multi-state Acyclic Network.....	400
7.2.3.1	Allocation Problem for a Multi-state Acyclic Network without Common Cause Failures.....	401
7.2.3.2	Allocation Problem for a Multi-state Acyclic	

	Network in the Presence of Common Cause Failures.....	403
7.2.4	Optimal Reliability Enhancement of Multi-state Acyclic Network .....	406
<b>8.</b>	<b>Universal Generating Function in Analysis and Optimization of Fault-tolerant Software .....</b>	<b>409</b>
8.1	Reliability and Performance of Fault-tolerant Software .....	409
8.1.1	Fault-tolerant Software Performance Model .....	409
8.1.1.1	Number of Versions that can be Simultaneously Executed.....	411
8.1.1.2	Version Termination Times .....	411
8.1.1.3	The Reliability and Performance of Components and the Entire System .....	412
8.1.1.4	Using Universal Generating Function for Evaluating the Execution Time Distribution of Components .....	413
8.1.1.5	Execution Time Distribution for the Entire System.....	415
8.1.1.6	Different Components Executed on the Same Hardware.....	415
8.2	Optimal Version Sequencing in Fault-tolerant Programs .....	421
8.3	Optimal Structure of Fault-tolerant Software Systems .....	425
	<b>References.....</b>	<b>431</b>
	<b>Index .....</b>	<b>441</b>

The Universal Generating Function in Reliability Analysis  
and Optimization

Levitin, G.

2005, XVIII, 442 p., Hardcover

ISBN: 978-1-85233-927-2
