I Turbomachinery Flow Physics

1 Introduction, Turbomachinery, Applications, Types	1
1.1 Turbine	1
1.2 Compressor	5
1.3 Application of Turbomachines	7
1.3.1 Power Generation, Steam Turbines	7
1.3.2 Power Generation, Gas Turbines	7
1.3.3 Aircraft Gas Turbines	8
1.3.4 Diesel Engine Application	10
1.4 Classification of Turbomachines	11
1.4.1 Compressor Types	11
1.4.2 Turbine Types	12
1.5 Working Principle of a Turbomachine	12
References, Chapter 1	12
2 Kinematics of Turbomachinery Fluid Motion	13
2.1 Material and Spatial Description of the Flow Field	13
2.1.1 Material Description	13
2.1.2 Jacobian Transformation Function and its Material Derivative	15
2.1.3 Spatial Description	18
2.2 Translation, Deformation, Rotation	19
2.3 Reynolds Transport Theorem	23
References, Chapter 2	25
3 Differential Balances in Turbomachinery	27
3.1 Differential Mass Flow Balance in Stationary Frame of Reference	27
3.1.1 Incompressibility Condition	29
3.2 Differential Momentum Balance in Stationary Frame of Reference	30
3.2.1 Relationship Between Stress Tensor and Deformation Tensor	32
3.2.2 Navier-Stokes Equation of Motion	34
3.2.3 Special Case: Euler Equation of Motion	36
3.3 Some Discussions on Turbomachinery Flow, Navier-Stokes Equations	36
3.4 Energy Balance in Stationary Frame of Reference	36
3.4.1 Mechanical Energy	36
3.4.2 Thermal Energy	39

3.4.3	Total Energy	40
3.4.4	Entropy Balance	41
3.5	Differential Balances in Rotating Frame of Reference	42
3.5.1	Velocity and Acceleration in Rotating Frame	42
3.5.2	Continuity Equation in Rotating Frame of Reference	44
3.5.3	Equation of Motion in Rotating Frame of Reference	45
3.5.4	Energy Equation in Rotating Frame of Reference	47
3.6	Reynolds Averaged Navier Stokes Equations, Intermittency	48
3.6.1	Physics of Intermittently Laminar-Turbulent Boundary Layer	49
3.6.2	Identification of Intermittent Behavior of Steady Flows	50
3.6.3	Turbulent/Non-Turbulent Decisions	51
3.6.4	Identification of Intermittent Behavior of Unsteady Flows ..	53
3.7	Implementation of Intermittency into Navier Stokes Equations	54
3.7.1	Reynolds-Averaged Equations for Fully Turbulent Flow ..	54
3.7.2	Conditioning the RANS for Intermittency Implementation ..	59
3.8	Modeling the Unsteady Intermittency for Turbomachinery Flow ...	61
	References, Chapter 3	65

4 Integral Balances in Turbomachinery 69

4.1	Mass Flow Balance	69
4.2	Balance of Linear Momentum	71
4.3	Balance of Moment of Momentum	76
4.4	Balance of Energy	81
4.4.1	Energy Balance Special Case 1: Steady Flow	87
4.4.2	Energy Balance Special Case 2: Steady, Constant Mass Flow ..	87
4.5	Application of Energy Balance to Turbomachinery	
	Components	88
4.5.1	Application: pipe, diffuser, nozzle	88
4.5.2	Application: Combustion Chamber	89
4.5.3	Application: Turbine, Compressor	90
4.5.3.1	Uncooled turbine	90
4.5.3.2	Cooled turbine	91
4.5.3.3	Uncooled compressor	92
4.6	Irreversibility and Total Pressure Losses	93
4.6.1	Application of Second Law to Turbomachinery Components ..	95
4.7	Flow at High Subsonic and Transonic Mach Numbers	97
4.7.1	Density Changes with Mach Number, Critical State	98
4.7.2	Effect of Cross-Section Change on Mach Number	103
4.7.3	Flow through Channels with Constant Cross Section	110
4.7.4	Normal Shock Wave Relations	116
4.7.5	Oblique Shock Wave Relations	123
4.7.6	Detached Shock Wave	126
4.7.7	Prandtl-Meyer Expansion	127
	References, Chapter 4	130

5 Theory of Turbomachinery Stages	131
5.1 Energy Transfer in Turbomachinery Stages	131
5.2 Energy Transfer in Relative Systems	132
5.3 General Treatment of Turbine and Compressor Stage	133
5.4 Dimensionless Stage Parameters	137
5.5 Relation Between Degree of Reaction and Blade Height	139
5.6 Effect of Degree of Reaction on the Stage Configuration	143
5.7 Effect of Stage Load Coefficient on Stage Power	144
5.8 Unified Description of a Turbomachinery Stage	145
5.8.1 Unified Description of Stage with Constant Mean Diameter	145
5.8.2 Generalized Dimensionless Stage Parameters	146
5.9 Special Cases	149
5.9.1 Case 1, Constant Mean Diameter	149
5.9.2 Case 2, Constant Meridional Velocity Ratio	149
5.10 Increase of Stage Load Coefficient, Discussion	150
References, Chapter 5	152
 6 Turbine and Compressor Cascade Flow Forces	 153
6.1 Blade Force in an Inviscid Flow Field	153
6.2 Blade Forces in a Viscous Flow Field	158
6.3 The Effect of Solidity on Blade Profile Losses	164
6.4 Relationship Between Profile Loss Coefficient and Drag	164
6.5 Optimum Solidity	166
6.6 Generalized Lift-Solidity Coefficient	167
6.6.1 Turbine Stator	169
6.6.2 Turbine Rotor	172
References, Chapter 6	176
 II Turbomachinery Losses, Efficiencies, Blades	
 7 Losses in Turbine and Compressor Cascades	 177
7.1 Profile Losses	178
7.2 Viscous Flow in Compressor Cascade	178
7.2.1 Calculation of Viscous Flows	179
7.2.2 Boundary Layer Thicknesses	179
7.2.3 Boundary Layer Integral Equation	181
7.2.4 Application of Boundary Layer Theory to Compressor Blades	182
7.2.5 Effect of Reynolds Number	186
7.2.6 Stage Profile Losses	186
7.3 Trailing Edge Thickness Losses	186
7.4 Losses Due to Secondary Flows	192
7.4.1 Calculation of Secondary Flow Losses for Unshrouded Blades	192
7.4.2 Secondary Flow Losses in Shrouded Blading	195
7.4.3 Losses Due to Leakage Flow in Shrouds	197

7.5	Exit Loss	203
7.6	Trailing Edge Ejection Mixing Losses of Gas Turbine Blades	204
7.6.1	Calculation of Mixing Losses	205
7.6.2	Trailing Edge Ejection Mixing Losses	209
7.6.3	Effect of Injection Velocity Ratio on Mixing Loss	209
7.6.4	Optimum Trailing Edge Mixing Losses	211
7.7	Stage Total Loss Coefficient	212
	References, Chapter 7	213
8	Efficiency of Multi-stage Turbomachines	215
8.1	Polytropic Efficiency	215
8.2	Isentropic Turbine Efficiency, Recovery Factor	218
8.3	Compressor Efficiency, Reheat Factor	222
8.4	Polytropic vs. Isentropic Efficiency	223
	References, Chapter 8	225
9	Incidence and Deviation	227
9.1	Cascade with Low Flow Deflection	227
9.1.1	Conformal Transformation	227
9.1.2	Flow Through an Infinitely Thin Circular Arc Cascade	236
9.1.3	Thickness Correction	242
9.1.4	Optimum Incidence	242
9.1.5	Effect of Compressibility	244
9.2	Deviation for High Flow Deflection	245
9.2.1	Calculation of Exit Flow Angle	247
	References, Chapter 9	249
10	Simple Blade Design	251
10.1	Compressor Blade Design	251
10.1.1	Low Subsonic Compressor Blade Design	251
10.1.2	Intermediate Subsonic Compressor Blades	258
10.1.3	Transonic, Supersonic Compressor Blades	258
10.2	Simple Turbine Blade Design	259
	References, Chapter 10	261
11	Radial Equilibrium	263
11.1	Derivation of Equilibrium Equations	264
11.2	Application of Streamline Curvature Method to Turbomachinery	272
11.2.1	Step-by-Step Solution Procedure	274
11.2.2	Examples	279
11.3	Special Cases	282
11.3.1	Free Vortex Flow	282
11.3.2	Forced vortex flow	283
11.3.3	Flow with Constant Flow Angle	284
	References, Chapter 11	285

III Turbomachinery Dynamic Performance

12 Nonlinear Dynamic Simulation of Turbomachinery

Components and Systems	287
12.1 Theoretical Background	288
12.2 Preparation for Numerical Treatment	294
12.3 One-Dimensional Approximation	295
12.3.1 Time Dependent Equation of Continuity	295
12.3.2 Time Dependent Equation of Motion	296
12.3.3 Time Dependent Equation of Total Energy	298
12.4 Numerical Treatment	303
References, Chapter 12	304

13 Generic Modeling of Turbomachinery Components and Systems

13.1 Generic Component Configuration	307
13.1.1 Group 1: Modular Configuration of Inlet, Exhaust, Pipe	307
13.1.2 Group 2: Heat Exchangers, Combustion Chamber	307
13.1.3 Group 3: Adiabatic Compressor and Turbine Components	309
13.1.4 Group 4: Diabatic Turbine and Compressor Components	311
13.1.5 Group 5: Control System, Valves, Shaft, Sensors	313
13.1.6 Coupling Module Plenum	313
13.2 Modular System Configuration Concept	314
13.3 Configuration of Systems of Partial Differential Equations	318
References, Chapter 13	318

14 Modeling of Inlet, Exhaust, and Pipe Systems

14.1 Unified Modular Treatment	319
14.2 Physical and Mathematical Modeling of Modules	319
14.3 Modeling of a Shock Tube	322
14.3.1 Shock Tube Dynamic Behavior	323
References, Chapter 14	327

15 Modeling of Heat Exchangers, Combustion Chambers, Afterburners

15.1 Modeling the Recuperators	330
15.1.1 Recuperator Hot Side Transients	331
15.1.2 Recuperator Cold Side Transients	331
15.1.3 Coupling Condition Hot, Cold Side	332
15.1.4 Recuperator Heat Transfer Coefficient	332
15.2 Modeling Combustion Chamber	333
15.2.1. Mass Flow Transients	335
15.2.2. Temperature Transients	336
15.2.3 Combustion Chamber Heat Transfer	338

15.3 Example: Startup, Shutdown of a Combustor-Preheater System . .	340
15.4 Modeling of Afterburners	344
References, Chapter 15	344
16 Modeling Compressor Component, Design, Off-Design .	345
16.1 Compressor Losses	346
16.1.1 Profile Losses	347
16.1.2 Diffusion Factor	349
16.1.3 Generalized Maximum Velocity Ratio for Cascade, Stage . .	353
16.1.4 Compressibility Effect	355
16.1.5 Shock Losses	359
16.1.6 Correlations for Boundary Layer Momentum Thickness . . .	369
16.1.7 Influence of Different Parameters on Profile Losses	370
16.1.7.1 Mach Number Effect	370
16.1.7.2 Reynolds number effect	371
16.1.7.3 Blade thickness effect	371
16.2 Compressor Aerodynamic Design and Off-Design Performance . .	371
16.2.1 Stage-by-stage and Row-by-Row Adiabatic Compression . .	372
16.2.1.1 Stage-by-stage calculation of compression process .	373
16.2.1.2 Row-by-row adiabatic compression	374
16.2.1.3 Off-design efficiency calculation	378
16.2.3 Generation of Steady State Performance Map	381
16.3. Modeling the Compressor Module for Dynamic Performance . . .	385
16.3.1 Module Level 1: Using Performance Maps	385
16.3.1.1 Quasi dynamic modeling using performance maps. .	388
16.3.1.2 Simulation example.	389
16.3.2 Module Level 2: Row-by-Row Adiabatic Calculation	391
16.3.2.1 Active surge prevention	392
16.3.2.2 Simulation example	393
16.3.3 Module Level 3: Row-by-Row Diabatic Compression	398
16.3.3.1 Description of diabatic compressor module.	399
16.3.3.2 Heat transfer closure equations	401
References, Chapter 16	403
17 Turbine Aerodynamic Design and Off-design	
Performance	409
17.1 Stage-by-Stage and Row-by-Row Adiabatic Design, Off-Design . .	411
17.1.1 Stage-by-Stage Calculation of Expansion Process	412
17.1.2 Row-by-Row Adiabatic Expansion	413
17.1.3 Off-Design Efficiency Calculation	418
17.1.4 Behavior Under Extreme Low Mass Flows	420
17.1.5 Example: Steady Design and Off-Design Behavior of a Multi-Stage Turbine	423
17.2 Off-Design Calculation Using Global Turbine Characteristics . . .	425
17.3 Modeling Turbine Module for Dynamic Performance Simulation .	427
17.3.1 Module Level 1: Using Performance Characteristics	427

17.3.2 Module Level 2: Row-by-Row Adiabatic Expansion	428
17.3.3 Module Level 3: Row-by-Row Diabatic Expansion	429
17.3.3.1 Diabatic turbine module, description method 1	431
17.3.3.2 Diabatic turbine module, description method 2	433
17.3.3.3 Heat transfer closure equations	435
References, Chapter 17	436

18 Gas Turbine Engines Design and Off-design Dynamic

Performance	439
18.1 Gas Turbine Processes, Steady Design Operation	441
18.1.1 Gas Turbine Process	443
18.1.2 Improvement of Gas Turbine Thermal Efficiency	449
18.2 Non-Linear Gas Turbine Dynamic Simulation	451
18.2.1 State of Dynamic Simulation, Background	452
18.3 Engine Components, Modular Concept, Module Identification	453
18.4 Levels of Gas Turbine Engine Simulations, Cross Coupling	459
18.5 Non-Linear Dynamic Simulation Case Studies	460
18.5.1 Case Study 1: Compressed Air Energy Storage Gas Turbine	461
18.5.1.1 Simulation of emergency shutdown	463
18.5.1.2 Simulation of a cold startup	465
18.5.2 Case Study 2: Power Generation Gas Turbine Engine	470
18.5.3 Case Study 3: Simulation of a Multi-Spool Gas Turbines	475
18.6 A Byproduct of Dynamic Simulation: Detailed Efficiency Calculation	478
18.7 Summary Part 3, Further Development	480
References, Chapter 18	482

A Vector and Tensor Analysis 485

A. 1 Tensors in Three-Dimensional Euclidean Space	485
A.1.1 Index Notation	486
A.2 Vector Operations: Scalar, Vector and Tensor products	487
A.2.1 Scalar product	487
A.2.2 Vector or cross product	487
A.2.3 Tensor product	488
A.3 Contraction of Tensors	489
A.4 Differential Operators in Fluid Mechanics	489
A.4.1 Substantial derivatives	490
A.4.2 Differential operator ∇	490
A5 Operator ∇ Applied to Different Functions	493
A5.1 Scalar Product of ∇ and V	493
A5.2 Vector product of ∇ and V	494
A5.3 Tensor Product of ∇ and V	495
A5.4 Scalar Product of ∇ and a Second Order Tensor	495
References, Appendix A	499

B Tensor Operations in Orthogonal Curvilinear Coordinate

Systems	501
B.1 Change of Coordinate System	501
B.2 Co- and Contravariant Base Vectors, Metric Coefficients	501
B.3 Physical Components of a Vector	504
B.4 Derivatives of the Base Vectors, Christoffel Symbols	504
B.5 Spatial Derivatives in Curvilinear Coordinate System	505
B.5.1 Application of ∇ to Tensor Functions	505
B.6 Application Example 1: Inviscid Flow Motion	507
B.6.1 Equation of Motion in Curvilinear Coordinate Systems	507
B.6.2 Special Case: Cylindrical Coordinate System	508
B.6.3 Base Vectors, Metric Coefficients	508
B.6.4 Christoffel Symbols	509
B.6.5 Introduction of Physical Components	510
B.7. Application Example 2: Viscous Flow Motion	511
B.7.1 Equation of Motion in Curvilinear Coordinate Systems	511
B.7.2 Special Case: Cylindrical Coordinate System	512
References, Appendix B	512
