

## Table of Contents

<b>1 Introduction.....</b>	<b>1</b>
Ashraf M. T. Elewa .....	1
References .....	5
<b>2 Active migration and passive transport of marine organisms in the fossil record .....</b>	<b>7</b>
Richard A. Reymont .....	7
2.1 Abstract.....	7
2.2 Introduction .....	7
2.3 Seasonal Migration .....	9
2.4 Active unidirectional migration.....	11
2.4.1 The Ammonites of the Saharan Turonian (Cretaceous) .....	12
2.4.2 The early Turonian ammonite genus <i>Benueites</i> in the South Atlantic Ocean.....	13
2.4.3 Ostracoda of the North African Paleocene .....	13
2.4.4 South Atlantic Island-Hopping.....	15
2.5 Imposed dispersion by submarine currents.....	16
2.6 Nekroplanktonic dispersal.....	18
2.7 Spurious migration .....	19
2.8 Concluding commentary.....	20
References .....	21
<b>3 Paleoecology and paleogeography of Eocene ostracod faunas from the Nile Valley between Minia and Maghagha, Upper Egypt.....</b>	<b>25</b>
Ashraf M. T. Elewa .....	25
3.1 Abstract.....	25
3.2 Introduction .....	26
3.3 Material and methods .....	26

3.4 Stratigraphy .....	27
3.4.1 The studied rock units .....	28
The Minia Formation .....	28
The Samalut Formation.....	28
The Maghagha Formation.....	29
The Qarara Formation .....	29
3.4.2 The studied sections .....	29
Section 1, representing the type locality of the Minia Formation.....	29
Section 2, representing the Samalut Formation .....	30
Section 3, representing the Maghagha Formation.....	30
Section 4 (Gebel El Sheikh Fadl), representing the type locality of the Maghagha Formation.....	30
Section 5 (Gebel Qarara), representing the type locality of the Qarara Formation .....	31
3.5 Biofacies analysis of ostracod assemblages .....	31
3.6 Ostracod population age-structure.....	35
3.7 The depositional environment of the study area.....	36
3.8 Paleogeographic distribution of the studied ostracods .....	37
3.9 Acknowledgements .....	38
3.10 Taxonomic notes .....	39
References .....	63
 <b>4 Morphological variability and adaptability in Egyptian Eocene ostracod species <i>Paracosta mokattamensis</i> (Bassiouni).....</b>	 <b>71</b>
Ashraf M. T. Elewa .....	71
4.1 Abstract.....	71
4.2 Introduction .....	71
4.3 Material and measures.....	73
4.4 Geometric morphometry.....	74
4.4.1 The relative warps analysis .....	74
Non affine shape differentiation in the three forms .....	75
Affine shape differentiation in the three forms .....	75
4.4.2 The thin plate spline analysis .....	76
4.5 Discussion and conclusions.....	78
4.6 Acknowledgement.....	81
References .....	81
 <b>5 Insect migration and dispersal with emphasis on Mediterranean ecosystems.....</b>	 <b>85</b>
Panos V. Petrakis and Anastasios Legakis .....	85
5.1 Abstract.....	85

5.2 What is insect migration and how it can be predicted? .....	86
5.3 How migration is measured.....	90
5.3.1 Biogeographical methods .....	91
5.3.2 Movement/redistribution methods.....	91
5.3.3 Genetic methods .....	91
5.3.4 Other techniques.....	92
Entomological Vertical Looking Radar (=VLR) .....	93
Mark-recapture technique (=MR) .....	93
Marking of individuals .....	94
Electrophoresis.....	94
5.4 Why insects migrate?.....	95
5.5 How insects migrate?.....	98
5.6 Cost of migration.....	100
5.7 Evolutionary traits associated with insect migrations .....	104
5.8 How insects face global climate change? .....	107
5.9 Two example cases of insect migration.....	113
5.9.1 A case of insect migration in northern Mediterranean and central Europe.....	113
5.9.2 A case of insect migration in eastern Mediterranean.....	114
5.10 Concluding remarks.....	115
5.11 Acknowledgements .....	117
References .....	118
 <b>6 Migration and adaptation of late Cenozoic cold-water molluscs in the North Pacific .....</b>	 <b>127</b>
Kazutaka Amano .....	127
6.1 Abstract.....	127
6.2 Introduction .....	127
6.3 Material and Methods.....	129
6.4 Trans-Pacific migration .....	130
6.4.1 Case studies of some gastropods .....	130
Migration of <i>Phanerolepida</i> .....	130
Migration of <i>Boreotrophon</i> .....	131
Migration of <i>Japelion</i> .....	133
Migration of <i>Sulcosipho</i> .....	134
6.5 Pattern of origin, migration and adaptation .....	135
6.6 Causes of origin, migration and adaptation .....	136
6.7 Plio-Pleistocene expansion of cold-water species .....	138
6.7.1 Recent cold-water species in Yellow Sea and East China Sea .....	138
6.7.2 Plio-Pleistocene migration route .....	139
6.8 Conclusions .....	142

6.9 Acknowledgements .....	143
References .....	143
<b>7 Migration in amphibians and reptiles: An overview of patterns and orientation mechanisms in relation to life history strategies .....</b>	<b>151</b>
Anthony P. Russell, Aaron M. Bauer and Megan K. Johnson .....	151
7.1 Abstract.....	151
7.2 Introduction .....	152
7.3 Homing and Orientation .....	155
7.4 Patterns of Amphibian Migration .....	156
7.5 Homing and Orientation in Amphibians .....	162
7.6 Patterns of Reptilian Migration .....	166
7.7 Homing and Orientation in Reptiles.....	177
7.8 Conclusion.....	184
References .....	184
<b>8 Glacial Retreat and its Influence on Migration of Mitochondrial Genes in the Long-toed Salamander (<i>Ambystoma macrodactylum</i>) in Western North America .....</b>	<b>205</b>
Mark D. Thompson and Anthony P. Russell .....	205
8.1 Abstract.....	205
8.2 Introduction .....	206
8.3 Phylogeographical Setting.....	208
8.4 Glaciation, Speciation and Range Dynamics.....	209
8.5 Biogeography and Ecological Demographics of the Long-toed Salamander.....	210
8.6 The Biology of <i>Ambystoma macrodactylum</i> .....	211
8.7 Comparative Phylogeography and Distribution of the Long-toed Salamander .....	212
8.8 Mitochondria and Phylogeography .....	214
8.9 Methods, Approaches, and Outcomes of Genetic Analyses.....	215
8.9.1 Genes, Partitions, and Congruent Molecular Analysis.....	215
8.9.2 Nested Cladistic Phylogeographical Analysis.....	218
8.10 Relevant Patterns of Population Structure in <i>Ambystoma macrodactylum</i> in Space and Time .....	224
8.10.1 Regional Patterns of Range Expansion and Isolation.....	224
8.10.2 Molecular Demographics .....	229
8.11 Conclusion.....	235
References .....	237
<b>9 The geography of a faunal turnover: tracking the Vallesian Crisis.....</b>	<b>247</b>

Isaac Casanovas-Vilar Salvador Moyà-Solà, Jordi Agustí and Meike	
Köhler .....	247
9.1 Abstract.....	247
9.2 Climatic change and mammalian faunal dynamics .....	248
9.3 The Vallesian Crisis and the late Miocene faunal turnover.....	249
9.4 Material and methods .....	251
9.4.1 The database .....	251
9.4.2 Provinciality .....	252
9.4.3 Diversity .....	254
9.4.4 Origination and extinction rates .....	255
9.4.5 Distinguishing variation in origination and extinction rates from variation in rates of preservation .....	256
9.5 Results .....	257
9.5.1 Provinciality .....	257
9.5.2 Diversity .....	270
9.5.3 Origination and Extinction rates.....	274
9.5.4 Biogeographical stability and its consequences during the late Miocene mammal turnover.....	277
9.5.5 Epilogue: This view of the European late Miocene .....	285
9.5.6 Data availability.....	286
9.6 Acknowledgements .....	286
References .....	287
Appendix .....	292
 <b>10 Evaluating the roles of connectivity and environment on faunal turnover: patterns in recent and fossil Iberian mammals.....</b>	
Joaquín Hortal, Manuel Nieto, Jesús Rodríguez, Jorge M. Lobo .....	301
10.1 Abstract.....	301
10.2 Introduction .....	302
10.3 Assessing the role of environment, habitat and connectivity on recent mammal communities.....	303
10.3.1 Estimation of present environmental and habitat differences between areas .....	304
10.3.2 Estimation of connectivity between areas .....	306
10.3.3 $\beta$ -diversity estimation.....	308
10.3.4 Determinants of $\beta$ -diversity.....	310
10.4 Assessing connectivity, model performance, and $\beta$ -diversity patterns in the Iberian mammals during the Neogene .....	314
10.4.1 Could $\beta$ -diversity patterns be extrapolated to the past using connectivity between areas? .....	314
10.5 Further insights .....	322
