List of Symbols	XIII
List of Abbreviations	XIV
1 Introduction	1
2 Fundamental Results on Social Security in a Deterministic Economy	5
2.1 PAYG versus Funded Social Security under Certainty	6
2.1.1 The Framework	6
2.1.2 The Budget Constraint Under a Funded System	6
2.1.3 The Budget Constraint Under PAYG Social Security	7
2.2 The Equivalence of Public Debt and Social Security	8
2.2.1 An Economy with Public Debt	8
2.2.2 Equivalence in a Microeconomic Context	9
2.2.3 Equivalence in a Macroeconomic Context	10
2.3 The Present Value of the Perpetual Implicit Tax of PAYG Social Security	12
2.3.1 A Simple Proof	12
2.3.2 Policy Implications of the Equality of the Perpetual Implicit Tax and Benefit Payments	13
2.3.3 Dynamic Efficiency, Inefficiency, Social Security, Bubbles, and Land	15
2.3.4 On the Discussion of Switching Regimes	16
2.4 The Typology of Social Security and Further Issues	17
2.4.1 The Indexation of Benefits: Wage Indexation and Demographic Indexation	18
2.4.2 Social Security and Incentives to Retire Early	19
2.4.3 Bismarckian versus Beveridgean Social Security	23
2.5 Summary	25
3 Social Security and Demographic Transition	31
3.1 Demographic Trends Around the World	31
3.1.1 Fertility and Life-Expectancy: 1950 – 2050	32

3.1.2	Changes in the Population Size and the Age Structure	34
3.1.3	The Old-Age Dependency Ratio: 1950–2050	40
3.2	Implications of Demographic Transition	42
3.2.1	Aging and Fiscal Sustainability	42
3.2.2	Aging, Factor Prices, Capital Flows, and Pension Reform: A Survey	44
4	Old-Age Provision and Uncertainty: An Introduction to Issues of Risk and Risk Sharing	51
4.1	A Primer on Intergenerational Risk Sharing and Social Security	51
4.2	Old-Age Income and Sources of Aggregate Risk	54
4.2.1	Productivity Risk and Valuation Risks	54
4.2.2	Demographic Risk	56
4.2.3	Political Risk	59
4.3	Overview	59
5	Labor Income Risk, Demographic Risk, and the Design of (Wage-Indexed) Social Security	63
5.1	A Simple Overlapping Generations Model with Stochastic Labor Income and Stochastic Population Growth	64
5.2	PAYG Pension Programs in a Small Open Economy with Stochastic Labor Income and Population Growth	66
5.2.1	Defined Contribution Income Indexation	66
5.2.2	Defined Benefit Income Indexation	68
5.3	Defined Contribution and Defined Benefits in a Closed Economy	71
5.3.1	Life-Cycle Resources under Defined Contribution and Defined Benefit	71
5.3.2	Variance of Life-Cycle Resources under Defined Contribution	72
5.3.3	Defined Benefit versus Defined Contribution	73
5.4	Between Defined Contribution and Defined Benefit: Optimal Demographic Indexation	75
5.4.1	Optimal Demographic Indexation in a Small Open Economy	75
5.4.2	Optimal Demographic Indexation in a Closed Economy	77
5.5	Further Issues	79
5.5.1	Uncertain Life-Expectation	79
5.5.2	<i>Ex-Ante</i> versus <i>Ex-Post</i> Risk Sharing	81
5.6	Summary	82
6	Demographics and Political Risks of Benefit Rule Changes: A Case Study for Germany	85
6.1	A Chronicle of the German Benefit Formula	87
6.1.1	The History of the German <i>Gesetzliche Rentenversicherung</i>	87
6.1.2	The Benefit Formula: A General Description	88

6.1.3	The Benefit Formula from 1957 to 2001: A “Moving” History	90
6.1.4	Disability, Incapability, Unemployment and Part-Time Work: One Thousand and One Ways to Retire Even Earlier than Early	94
6.2	The Volatility of Individual Social Security Wealth: A Cohort Analysis of the Generosity of the Benefit Rule	99
6.2.1	A Measure of Relative Generosity	100
6.2.2	The Impact of Benefit Rule Changes on Relative Generosity for Selective Cohorts	102
6.2.3	Discussion and Caveats	108
6.3	Demographics and Population Projections	109
6.3.1	Demographic Developments of the Past Decades	109
6.3.2	On the Precision of Past Population Projections	111
6.4	Demographic Development and Benefit Rule Changes	113
6.4.1	Time-Series Analysis of Relative Generosity	114
6.4.2	Estimating a Policy Function of Generosity: Does Germany Have an Implicit Demographic Factor?	115
6.5	Future Changes: What Does It Take To Make the <i>GRV</i> Sustainable?	118
6.5.1	Applying Generational Accounting to the Public Pension Scheme	119
6.5.2	Soft Transition – An Alternative Indicator of Sustainability	122
6.5.3	Quantifying Sustainability Under Status Quo: Results	123
6.6	Summary	125
7	Social Security, Portfolio Choice, and Financial Markets	127
7.1	Social Security and Optimal Portfolio Diversification	127
7.1.1	Portfolio Choice in the Presence of Social Security	128
7.1.2	A Portfolio Approach to Designing Social Security	134
7.1.3	More Diversification: Real Estate and International Assets	139
7.1.4	Strategic Asset Allocation and Portfolio Choices Over the Life-Cycle	143
7.2	Social Security and Financial Instruments	146
7.2.1	Annuities and Inflation-Indexed Annuities	147
7.2.2	Exploiting the Equity Premium versus Costs of Minimum Benefit Guarantees	149
7.2.3	Potential New Financial Instruments: Innovative Government Debt Management and Macro-Markets	151
8	Conclusion	153
	Appendices	155
A	Mathematical Appendix	155
A.1	Derivation of the Variance of y_t^{DC}	155
A.2	Derivation of the Variance of y_t^{DB} in a Small Open Economy	155

A.3	Derivation of the Variance of y_t^{DB} with Macroeconomic Feedback .	156
A.4	Proof that $E[y_t]$ is Strictly Increasing in ρ	157
A.5	Derivation of the Variance Under the General Demographic Indexation Policy in a Closed Economy	157
A.6	The Effect of Changing the Statistical Calculation of the Benefit Formula	158
Appendix: Tables		161
B.1	Regions and Country-Groups	161
B.2	Further Information on the GRV	162
B.3	Tables for Efficient Portfolio Frontier	164
