Section I Molecular, Cytological, and Biochemical Aspects of Haploid Embryogenesis	1
I.1 Overview of Haploidy	3
C.E. PALMER and W.A. KELLER	
1 Introduction	3
2 Natural Occurrence of Haploids	3
3 Induction of Haploidy	4
4 Conclusion	6
References	7
I.2 Pathways to Microspore Embryogenesis	11
T. AIONESEI, A. TOURAEV, and E. HEBERLE-BORS	
1 Introduction	11
2 Embryogenic Induction of Microspores	12
3 Cellular Changes and Cell Cycle Events During Induction of Embryogenesis	13
4 Direct Embryogenesis Versus Indirect Plant Formation	16
5 Division Pathways of Embryogenic Microspores	19
6 Identification of the Developmental Fate of Microspores by Cell Tracking	24
7 Apical-Basal Polarity Formation of Embryogenic Microspores	26
8 Conclusion	30
References	30
I.3 The Role of Stress in the Induction of Haploid Microspore Embryogenesis	35
S. ZORINIANTS, A.S. TASHPULATOV, E. HEBERLE-BORS, and A. TOURAEV	
1 Introduction	35
2 Stress and Microspore Embryogenesis	35
3 Morphological Characteristics of Stress-Induced Embryogenic Microspores	37
4 Mechanism of the Stress-Induced Switch from the Gametophytic to the Sporophytic Mode of Development	38
5 Conclusions and Perspectives	46
References	48

I.4	Microspore Embryo Induction and Development in Higher Plants: Cytological and Ultrastructural Aspects	53
	C. CLÉMENT, R.S. SANGWAN, and B. SANGWAN-NORREEL	
1	Introduction	53
2	The Microspore at the Sampling Stage	56
3	The Pretreated Microspore	59
4	Embryogenic Development of the Microspore	61
5	Conclusions	67
	References	68
I.5	Biochemical and Molecular Aspects of Haploid Embryogenesis ..	73
	K. BOUTILIER, M. FIER, C.-M. LIU, and A.H.M. VAN DER GEEST	
1	Introduction	73
2	Gene Identification Strategies for Early MDE Development	74
3	Extracellular Signalling Molecules in MDE Development	83
4	Conclusions and Perspectives	90
	References	91
I.6	Storage Product Metabolism in Microspore-Derived Cultures of Brassicaceae	97
	R.J. WESELAKE	
1	Introduction	97
2	Lipid Biosynthesis in MD Cultures	98
3	Carbohydrate Metabolism in MD Cultures of <i>B. napus</i>	108
4	Storage Protein Biosynthesis in MD Cultures of <i>B. napus</i>	112
5	Glucosinolate Biosynthesis in MDEs of <i>B. napus</i>	114
6	Conclusions and Future Directions	115
	References	116
I.7	Chromosome Doubling and Recovery of Doubled Haploid Plants ..	123
	K.J. KASHA	
1	Introduction	123
2	Terminology	124
3	Chromosome Doubling of Androgenetic Haploids	126
4	Gynogenetic Haploid Production and Chromosome Doubling . . .	139
5	Other Avenues for Chromosome Doubling	143
6	Chromosomal Variation Associated with Chromosome Doubling ..	144
7	Conclusions	146
	References	147
I.8	Utilization of Microspore-Derived Embryos	153
	Y. TAKAHATA, H. FUKUOKA, and K. WAKUI	
1	Introduction	153
2	Mutation	153
3	Dry Artificial Seed	155

4	Transformation	161
5	Conclusions	164
	References	165

Section II Utilization of Haploids in the Improvement of Specific Crop Species 171

II.1	Haploids in the Improvement of Solanaceous Species	173
	G.C.C. TAI	
1	Introduction	173
2	Induction of Haploids	174
3	Development and Use of Doubled Haploids	177
4	Development and Use of Dihaploids	179
5	Research Topics with Application of Haploidization	181
6	Conclusions	184
	References	185
II.2	Haploids in the Improvement of Crucifers	191
	W. FRIEDT and M.K. ZARHLOUL	
1	Introduction	191
2	Progress and Status of Haploid Production	192
3	Use of Haploids in Breeding of Crucifers	198
4	<i>Brassica</i> Haploids as a Tool in Breeding Research	202
5	Haploids in Combination with Other Biotechnological Methods .	205
6	Conclusions, Future Trends and Perspectives	207
	References	208
II.3	Haploids in the Improvement of Poaceae	215
	P. DEVAUX and R. PICKERING	
1	Introduction	215
2	Doubled Haploid Production	216
3	Use of Doubled Haploids	227
4	Conclusion	232
	References	233
II.4	Haploids in the Improvement of Woody Species	243
	S.B. ANDERSEN	
1	Introduction	243
2	Gametophyte Development in Woody Species	244
3	Haploid Development in Woody Species	245
4	Examples of Woody Angiosperms	249
5	Examples in Gymnosperms	253
6	Conclusions	254
	References	254

II.5	Haploids in the Improvement of Miscellaneous Crop Species (Cucurbitaceae, Liliaceae, Asparageceae, Chenopodiaceae, Araceae and Umbelliferae)	259
	A.G. JUHÁSZ and M. JAKŤE	
1	Introduction	259
2	Haploid Induction in Cucurbitaceae Species	260
3	Haploid Induction in Liliaceae Species	262
4	Haploid Induction in Asparagaceae	266
5	Haploid Induction in Chenopodiaceae	268
6	Haploid Induction in Araceae	270
7	Haploid Induction in Umbelliferae	270
8	Conclusion	271
	References	271
II.6	Haploids in the Improvement of Linaceae and Asteraceae	277
	K. NICHTERLEIN and R. HORN	
1	Linaceae	277
1.1	Introduction	277
1.2	Haploids Through Twinning Genotypes and Their Use in Genetic Research and Mapping	279
1.3	Doubled Haploids Through Anther and Microspore Culture and Use in Crop Improvement	280
1.4	Conclusions and Future Prospects of Doubled Haploids in Linseed Improvement	283
2	Asteraceae	284
2.1	Introduction	284
2.2	Production of Doubled Haploids by Anther and Microspore Culture in the Genus <i>Helianthus</i>	285
2.3	Doubled Haploid Production of Sunflower by Induced Parthenogenesis	289
2.4	Conclusions and Future Prospects of Doubled-Haploid Production in Asteraceae	290
	References	291
II.7	Challenges and Limitations to the Use of Haploidy in Crop Improvement	295
	C.E. PALMER and W.A. KELLER	
1	General Aspects	295
2	Androgenesis	296
3	Gynogenesis	298
4	Parthenogenesis and Wide Hybridization Crosses	298
5	Emerging Uses of Doubled Haploids	299
	References	300
	Subject Index	305

Haploids in Crop Improvement II

Palmer, C.E.D.; Keller, W.A.; Kasha, K. (Eds.)

2005, XV, 318 p., Hardcover

ISBN: 978-3-540-22224-8
