

Contents

1	Introduction	1
1.1	The Social Life of Objects	1
1.2	Categories Versus Sets	3
1.3	Overview of Typical Application Areas	5
1.4	What Can Be Found in This Book	9

Part I Basics

2	Introducing Categories	15
2.1	Graphs	15
2.2	Categories	20
2.3	Distinguished Kinds of Morphisms	27
3	Building Categories	31
3.1	Some Elementary Operations	31
3.2	“Adding Structure”	33
3.3	Subcategories	37
3.4	Eiffel Class Specifications	43
3.5	Temporal Specifications	46
3.6	Closure Systems	53
4	Universal Constructions	57
4.1	Initial and Terminal Objects	58
4.2	Sums and Products	61
4.3	Pushouts and Pullbacks	67
4.4	Limits and Colimits	75
5	Functors	83
5.1	The Social Life of Categories	83
5.2	Universal Constructions Versus Functors	89

Part II Advanced Topics

6	Functor-Based Constructions.....	95
6.1	Functor-Distinguished Kinds of Categories	95
6.2	Structured Objects and Morphisms.....	110
6.3	Functor-Structured Categories	117
6.4	The Grothendieck Construction.....	124
6.5	Institutions	128
7	Adjunctions.....	141
7.1	The Social Life of Functors.....	141
7.2	Reflective Functors.....	145
7.3	Adjunctions.....	151
7.4	Adjunctions in Institutions	160
7.5	Coordinated Categories	167

Part III Applications

8	CommUnity.....	177
8.1	A Language for Program Design	177
8.2	Interconnecting Designs.....	182
8.3	Refining Designs	191
9	Architectural Description	197
9.1	Motivation.....	197
9.2	Connectors in CommUnity	199
9.3	Examples.....	204
9.4	An ADL-Independent Notion of Connector.....	211
9.5	Adding Abstraction to Connectors	214
10	An Algebra of Connectors.....	221
10.1	Three Operations on Connectors	223
10.2	Higher-Order Connectors.....	227
	References.....	237
	Index.....	245
