

# Contents

Measurement principles for traceability in chemical analysis .....	1	Traceability issues in measurement .....	121
Protocols for traceability in chemical analysis. Part I: Definitions and terminology .....	12	Comparative study of the presentations at the CCQM workshop on traceability .....	125
Protocols for traceability in chemical analysis. Part II: Design and use .....	24	Traceability in laboratory medicine .....	128
Metrological traceability in laboratory medicine .....	29	Testing for foods derived from modern biotechnology: opportunities and limitations for metrology .....	134
Traceability and analytical chemistry .....	36	A national traceability system for chemical measurements .....	141
Do interlaboratory comparisons provide traceability? ..	45	Establishing measurement traceability in clinical chemistry .....	147
From total allowable error via metrological traceability to uncertainty of measurement of the unbiased result ...	50	Clinical laboratory reference networks .....	160
Practical considerations on the traceability to conventional scales .....	55	One way of disseminating reference values with demonstrated traceability and demonstrated uncertainty to field laboratories: IMEP .....	166
Traceability of (values carried by) reference materials ..	64	Implementation of traceability – needs and perspective of the in-vitro-diagnostic industry .....	175
What can we learn from traceability in physical measurements? .....	70	Improvements in efficiency of production and traceability for certification of reference materials ....	177
How to achieve international comparability for chemical measurements .....	74	Traceable measurement in clinical laboratories .....	184
The key elements of traceability in chemical measurement: agreed or still under debate? .....	79	A traceability protocol to the SI by gravimetric analysis	192
The practical realization of the traceability of chemical measurements standards .....	85	Reference samples for analysis of gas impurities in aluminium and titanium alloys: Features of production, certification and usage to ensure traceability of results .....	195
Link to the SI via primary direct methods .....	93	The use of certified reference materials in the Romanian traceability scheme .....	199
The role of reference materials .....	97	Traceable measurements of pH .....	206
The measurement assurance concept in calibration and traceability at NBS/NIST .....	102	The development of gas standards and calibration techniques for measurements of vehicle, aircraft and industrial emissions, natural gas, occupational exposure and air quality .....	212
Lifetime of the traceability chain in chemical measurement .....	105	Problems of traceability of total protein and catecholamine determinations in human urine .....	222
Proficiency evaluation as a traceability link in chemical metrology .....	109		
Achieving traceability in chemical measurement – a metrological approach to proficiency testing .....	114		

---

Traceability in routine chemical measurements: an example of application in the determination of CO <sub>2</sub> at atmospheric concentration . . . . .	226	Traceable property values of in-house reference materials . . . . .	269
Traceability of measurement results of the effective acquisition time in gamma-ray spectrometry implemented by the pulser method . . . . .	230	Primary reference materials and traceability chain for gas composition . . . . .	272
Practical ways in establishing traceability in chemical and other measurements in Mexico . . . . .	239	Traceability to units . . . . .	275
Benefits of the implementation of a metrological structure for water analyses . . . . .	245	Traceability without uncertainty: current situation in pharmaceutical industry . . . . .	277
Validation steps for traceability of linear calibrated chemical measurements . . . . .	253	The role of reference materials in analytical chemistry . . . . .	279
Traceability, is it what we really want in our chemical measurements? . . . . .	259	Meeting ISO/IEC 17025 Traceability Requirements: A New Guide with Worked Examples . . . . .	284
Traceability in measurement – time for an update? . . . .	260	UK delivery of traceable chemical measurements in the 21 <sup>st</sup> century: building on the foundation of the VAM programme . . . . .	287
On the existence of primary methods of measurement . . . .	262	Disseminating traceability in chemical measurement: Principles of a new EURACHEM/CITAC guide . . . . .	290
Traceability and uncertainty – A comparison of their application in chemical and physical measurement . . . .	264	CITAC Position Paper: Traceability in chemical measurement . . . . .	293
Traceability and its role in interlaboratory comparisons (proficiency testing programmes), modeled on trace element determination in biological materials . . . . .	267	Glossary of analytical terms . . . . .	295

Traceability in Chemical Measurement

De Bièvre, P.; Günzler, H. (Eds.)

2005, XII, 300 p., Hardcover

ISBN: 978-3-540-43989-9
