
Contents

1	Prerequisites	1
1.1	Point Set Topology	1
1.1.1	Sets and functions	1
1.1.2	Metric spaces	2
1.2	Measures and Lebesgue Integration	4
1.2.1	Measure	4
1.2.2	Lebesgue integration	6
1.3	Nonnegative Matrices	11
1.3.1	Perron–Frobenius Theorem	11
1.3.2	Stochastic matrices	13
1.4	Compact Abelian Groups and Characters	14
1.4.1	Compact abelian groups	14
1.4.2	Characters	16
1.4.3	Fourier series	17
1.4.4	Endomorphisms of a torus	18
1.5	Continued Fractions	20
1.6	Statistics and Probability	21
1.6.1	Independent random variables	21
1.6.2	Change of variables formula	23
1.6.3	Statistical laws	23
1.7	Random Number Generators	25
1.7.1	What are random numbers?	25
1.7.2	How to generate random numbers	27
1.7.3	Random number generator in Maple	28
1.8	Basic Maple Commands	28
1.8.1	Restart, colon, semicolon, Digits	29
1.8.2	Set theory and logic	29
1.8.3	Arithmetic	31
1.8.4	How to plot a graph	32
1.8.5	Calculus: differentiation and integration	34
1.8.6	Fractional and integral parts of real numbers	35

1.8.7	Sequences and printf	36
1.8.8	Linear algebra	37
1.8.9	Fourier series	39
1.8.10	Continued fractions I	40
1.8.11	Continued fractions II	41
1.8.12	Statistics and probability	42
1.8.13	Lattice structures of linear congruential generators	44
1.8.14	Random number generators in Maple	44
1.8.15	Monte Carlo method	45
2	Invariant Measures	47
2.1	Invariant Measures	47
2.2	Other Types of Continued Fractions	56
2.3	Shift Transformations	59
2.4	Isomorphic Transformations	60
2.5	Coding Map	66
2.6	Maple Programs	70
2.6.1	The logistic transformation	71
2.6.2	Chebyshev polynomials	73
2.6.3	The beta transformation	76
2.6.4	The baker's transformation	78
2.6.5	A toral automorphism	79
2.6.6	Modified Hurwitz transformation	80
2.6.7	A typical point of the Bernoulli measure	81
2.6.8	A typical point of the Markov measure	82
2.6.9	Coding map for the logistic transformation	84
3	The Birkhoff Ergodic Theorem	85
3.1	Ergodicity	85
3.2	The Birkhoff Ergodic Theorem	89
3.3	The Kronecker–Weyl Theorem	97
3.4	Gelfand's Problem	99
3.5	Borel's Normal Number Theorem	99
3.6	Continued Fractions	100
3.7	Approximation of Invariant Density Functions	103
3.8	Physically Meaningful Singular Invariant Measures	105
3.9	Maple Programs	112
3.9.1	The Gauss transformation	112
3.9.2	Discrete invariant measures	113
3.9.3	A cobweb plot	114
3.9.4	The Kronecker–Weyl Theorem	115
3.9.5	The logistic transformation	116
3.9.6	An unbounded invariant density and the speed of growth at a singularity	118
3.9.7	Toral automorphisms	120

3.9.8	The Khinchin constant	121
3.9.9	An infinite invariant measure	123
3.9.10	Cross sections of the solenoid	125
3.9.11	The solenoid	126
3.9.12	Feigenbaum's logistic transformations	130
3.9.13	The Hénon attractor	130
3.9.14	Basin of attraction for the Hénon attractor	131
4	The Central Limit Theorem	133
4.1	Mixing Transformations	133
4.2	The Central Limit Theorem	138
4.3	Speed of Correlation Decay	143
4.4	Maple Programs	147
4.4.1	The Central Limit Theorem: $\sigma > 0$ for the logistic transformation	147
4.4.2	The Central Limit Theorem: the normal distribution for the Gauss transformation	148
4.4.3	Failure of the Central Limit Theorem: $\sigma = 0$ for an irrational translation mod 1	151
4.4.4	Correlation coefficients of $Tx = 2x \bmod 1$	151
4.4.5	Correlation coefficients of the beta transformation	152
4.4.6	Correlation coefficients of an irrational translation mod 1	153
5	More on Ergodicity	155
5.1	Absolutely Continuous Invariant Measures	155
5.2	Boundary Conditions for Invariant Measures	156
5.3	Kac's Lemma on the First Return Time	159
5.4	Ergodicity of Markov Shift Transformations	165
5.5	Singular Continuous Invariant Measures	170
5.6	An Invertible Extension of a Transformation on an Interval ...	172
5.7	Maple Programs	173
5.7.1	Piecewise defined transformations	173
5.7.2	How to sketch the graph of the first return time transformation	174
5.7.3	Kac's lemma for the logistic transformation	175
5.7.4	Kac's lemma for an irrational translation mod 1	176
5.7.5	Bernoulli measures on the unit interval	178
5.7.6	An invertible extension of the beta transformation	179
6	Homeomorphisms of the Circle	183
6.1	Rotation Number	183
6.2	Topological Conjugacy and Invariant Measures	188
6.3	The Cantor Function and Rotation Number	193
6.4	Arnold Tongues	194

6.5	How to Sketch a Conjugacy Using Rotation Number	195
6.6	Unique Ergodicity	196
6.7	Poincaré Section of a Flow	198
6.8	Maple Programs	199
6.8.1	The rotation number of a homeomorphism of the unit circle	199
6.8.2	Symmetry of invariant measures	200
6.8.3	Conjugacy and the invariant measure	201
6.8.4	The Cantor function	202
6.8.5	The Cantor function as a cumulative density function	202
6.8.6	Rotation numbers and a staircase function	204
6.8.7	Arnold tongues	205
6.8.8	How to sketch a topological conjugacy of a circle homeomorphism I	206
6.8.9	How to sketch a topological conjugacy of a circle homeomorphism II	207
7	Mod 2 Uniform Distribution	211
7.1	Mod 2 Normal Numbers	211
7.2	Skew Product Transformations	213
7.3	Mod 2 Normality Conditions	218
7.4	Mod 2 Uniform Distribution for General Transformations	221
7.5	Random Walks on the Unit Circle	222
7.6	How to Sketch a Cobounding Function	226
7.7	Maple Programs	229
7.7.1	Failure of mod 2 normality for irrational translations mod 1	229
7.7.2	Ergodic components of a nonergodic skew product transformation arising from the beta transformation	231
7.7.3	Random walks by an irrational angle on the circle	232
7.7.4	Skew product transformation and random walks on a cyclic group	233
7.7.5	How to plot points on the graph of a cobounding function	234
7.7.6	Fourier series of a cobounding function	235
7.7.7	Numerical computation of a lower bound for $n n\theta $	236
8	Entropy	237
8.1	Definition of Entropy	237
8.2	Entropy of Shift Transformations	242
8.3	Partitions and Coding Maps	245
8.4	The Shannon–McMillan–Breiman Theorem	248
8.5	Data Compression	252
8.6	Asymptotically Normal Distribution of $(-\log P_n)/n$	253
8.7	Maple Programs	254

8.7.1	Definition of entropy: the logistic transformation	254
8.7.2	Definition of entropy: the Markov shift	255
8.7.3	Cylinder sets of a nongenerating partition: $Tx = 2x$ mod 1	256
8.7.4	The Shannon–McMillan–Breiman Theorem: the Markov shift	258
8.7.5	The Shannon–McMillan–Breiman Theorem: the beta transformation	260
8.7.6	The Asymptotic Equipartition Property: the Bernoulli shift	261
8.7.7	Asymptotically normal distribution of $(-\log P_n)/n$: the Bernoulli shift	265
9	The Lyapunov Exponent: One-Dimensional Case	269
9.1	The Lyapunov Exponent of Differentiable Maps	269
9.2	Number of Significant Digits and the Divergence Speed	278
9.3	Fixed Points of the Gauss Transformation	280
9.4	Generalized Continued Fractions	282
9.5	Speed of Approximation by Convergents	286
9.6	Random Shuffling of Cards	290
9.7	Maple Programs	292
9.7.1	The Lyapunov exponent: the Gauss transformation	292
9.7.2	$H_{n,k}$: a local version for the Gauss transformation	293
9.7.3	$H_{n,k}$: a global version for the Gauss transformation	294
9.7.4	The divergence speed: a local version for the Gauss transformation	294
9.7.5	The divergence speed: a global version for the Gauss transformation	295
9.7.6	Number of correct partial quotients: validity of Maple algorithm of continued fractions	295
9.7.7	Speed of approximation by convergents: the Bernoulli transformation	297
10	The Lyapunov Exponent: Multidimensional Case	299
10.1	Singular Values of a Matrix	299
10.2	Oseledec’s Multiplicative Ergodic Theorem	302
10.3	The Lyapunov Exponent of a Differentiable Mapping	310
10.4	Invariant Subspaces	315
10.5	The Lyapunov Exponent and Entropy	318
10.6	The Largest Lyapunov Exponent and the Divergence Speed	321
10.7	Maple Programs	323
10.7.1	Singular values of a matrix	323
10.7.2	A matrix sends a circle onto an ellipse	324
10.7.3	The Lyapunov exponents: a local version for the solenoid mapping	325

10.7.4	The Lyapunov exponent: a global version for the Hénon mapping	328
10.7.5	The invariant subspace E_1 of the Hénon mapping	329
10.7.6	The invariant subspace E_2 of the Hénon mapping	330
10.7.7	The divergence speed: a local version for a toral automorphism	331
10.7.8	The divergence speed: a global version for Hénon mapping	332
11	Stable and Unstable Manifolds	333
11.1	Stable and Unstable Manifolds of Fixed Points	333
11.2	The Hénon Mapping	336
11.3	The Standard Mapping	339
11.4	Stable and Unstable Manifolds of Periodic Points	340
11.5	Maple Programs	345
11.5.1	A stable manifold of the Hénon mapping	345
11.5.2	An unstable manifold of the Hénon mapping	348
11.5.3	The boundary of the basin of attraction of the Hénon mapping	349
11.5.4	Behavior of the Hénon mapping near a saddle point ..	353
11.5.5	Hyperbolic points of the standard mapping	355
11.5.6	Images of a circle centered at a hyperbolic point under the standard mapping	357
11.5.7	Stable manifolds of the standard mapping	358
11.5.8	Intersection of the stable and unstable manifolds of the standard mapping	361
12	Recurrence and Entropy	363
12.1	The First Return Time Formula	363
12.2	L^p -Convergence	367
12.3	The Nonoverlapping First Return Time	369
12.4	Product of the Return Time and the Probability	376
12.5	Symbolic Dynamics and Topological Entropy	377
12.6	Maple Programs	381
12.6.1	The first return time R_n for the Bernoulli shift	381
12.6.2	Averages of $(\log R_n)/n$ and R_n for the Bernoulli shift ..	382
12.6.3	Probability density function of $(\log R_n)/n$ for the Bernoulli shift	383
12.6.4	Convergence speed of the average of $\log R_n$ for the Bernoulli shift	385
12.6.5	The nonoverlapping first return time	386
12.6.6	Probability density function of $R_n P_n$ for the Markov shift	388
12.6.7	Topological entropy of a topological shift space	389

13 Recurrence and Dimension	391
13.1 Hausdorff Dimension	391
13.2 Recurrence Error	393
13.3 Absolutely Continuous Invariant Measures	394
13.4 Singular Continuous Invariant Measures	398
13.5 The First Return Time and the Dimension	400
13.6 Irrational Translations Mod 1	403
13.7 Maple Programs	408
13.7.1 The recurrence error	409
13.7.2 The logistic transformation	409
13.7.3 The Hénon mapping	411
13.7.4 Type of an irrational number	412
13.7.5 An irrational translation mod 1	414
14 Data Compression	417
14.1 Coding	417
14.2 Entropy and Data Compression Ratio	419
14.3 Huffman Coding	423
14.4 Lempel–Ziv Coding	425
14.5 Arithmetic Coding	428
14.6 Maple Programs	429
14.6.1 Huffman coding	429
14.6.2 Lempel–Ziv coding	433
14.6.3 Typical intervals arising from arithmetic coding	436
