Introduction	1
Notations and Conventions	9
1 Groups Acting on Lattices	13
1.1 Introduction	13
1.2 G -Lattices	13
1.3 Examples	14
1.4 Standard Lattice Constructions	16
1.5 Indecomposable Lattices	18
1.6 Conditioning the Lattice	20
1.7 Reflections and Generalized Reflections	21
1.8 Lattices Associated with Root Systems	24
1.9 The Root System Associated with a Faithful \mathcal{G} -Lattice	27
1.10 Finite Subgroups of $GL_n(\mathbb{Z})$	28
2 Permutation Lattices and Flasque Equivalence	33
2.1 Introduction	33
2.2 Permutation Lattices	33
2.3 Stable Permutation Equivalence	34
2.4 Permutation Projective Lattices	35
2.5 \hat{H}^i -trivial, Flasque and Coflasque Lattices	36
2.6 Flasque and Coflasque Resolutions	37
2.7 Flasque Equivalence	38
2.8 Quasi-permutation Lattices and Monomial Lattices	39
2.9 An Invariant for Flasque Equivalence	40
2.10 Overview of Lattice Types	42
2.11 Restriction to the Sylow Normalizer	43
2.12 Some \mathcal{S}_n -Lattices	44

3	Multiplicative Actions	51
3.1	Introduction	51
3.2	The Group Algebra of a G -Lattice	51
3.3	Reduction to Finite Groups, \mathbb{Z} -structure, and Finite Generation	52
3.4	Units and Semigroup Algebras	53
3.5	Examples	55
3.6	Multiplicative Invariants of Weight Lattices	61
3.7	Passage to an Effective Lattice	63
3.8	Twisted Multiplicative Actions	64
3.9	Hopf Structure	66
3.10	Torus Invariants	67
4	Class Group	69
4.1	Introduction	69
4.2	Some Examples	70
4.3	Krull Domains and Class Groups	70
4.4	Samuel's Exact Sequence	72
4.5	Generalized Reflections on Rings	73
4.6	Proof of Theorem 4.1.1	75
5	Picard Group	77
5.1	Introduction	77
5.2	Invertible Modules	78
5.3	The Skew Group Ring	79
5.4	The Trace Map	80
5.5	The Kernel of the Map $\text{Pic}(R^G) \rightarrow \text{Pic}(R)$	81
5.6	The Case of Multiplicative Actions	83
6	Multiplicative Invariants of Reflection Groups	85
6.1	Introduction	85
6.2	Proof of Theorem 6.1.1	86
6.3	Computing the Ring of Invariants	87
6.4	SAGBI Bases	91
7	Regularity	95
7.1	Introduction	95
7.2	Projectivity over Invariants	96
7.3	Linearization by the Slice Method	97
7.4	Proof of Theorem 7.1.1	99
7.5	Regularity at the Identity	100
8	The Cohen-Macaulay Property	103
8.1	Introduction	103
8.2	Height and Grade	104
8.3	Local Cohomology	105
8.4	Cohen-Macaulay Modules and Rings	106

8.5	The Cohen-Macaulay Property for Invariant Rings	107
8.6	The Ellingsrud-Skjelbred Spectral Sequences	110
8.7	Annihilators of Cohomology Classes	112
8.8	The Restriction Map for Cohen-Macaulay Invariants	114
8.9	The Case of Multiplicative Invariants	116
8.10	Proof of Theorem 8.1.1	118
8.11	Examples	121
9	Multiplicative Invariant Fields	125
9.1	Introduction	125
9.2	Stable Isomorphism	128
9.3	Retract Rationality	128
9.4	The “No-name Lemma”	131
9.5	Function Fields of Algebraic Tori	133
9.6	Some Rationality Results for Multiplicative Invariant Fields	138
9.7	Some Concepts from Algebraic Geometry	141
9.8	The Field of Matrix Invariants as a Multiplicative Invariant Field	142
10	Problems	149
10.1	The Cohen-Macaulay Problem	149
10.2	Semigroup Algebras	151
10.3	Computational Issues	154
10.4	Essential Dimension Estimates	155
10.5	Rationality Problems	159
	References	161
	Index	173

Multiplicative Invariant Theory

Lorenz, M.

2005, XII, 180 p. 5 illus., Hardcover

ISBN: 978-3-540-24323-6
