

Contents

1	Introduction	1
1.1	General Remarks	1
1.2	About the Content of the Book	2
1.3	The General Problem	3

Part I Classical Description of the Interaction of Light with Matter

2	The Linear Dielectric Susceptibility	9
2.1	Maxwell's Equations	9
2.2	The Dielectric Susceptibility	10
2.3	Linear Optical Constants	12
2.4	Some General Remarks	15
2.5	Example: Orientation Polarization and Debye's Equations . . .	15
3	The Classical Treatment of Free and Bound Charge Carriers	21
3.1	Free Charge Carriers	21
3.1.1	Derivation of Drude's Formula	21
3.1.2	Extended Detail: Another Evaluation of Drude's Formula	24
3.2	The Oscillator Model for Bound Charge Carriers	26
3.2.1	General Idea	26
3.2.2	Microscopic Fields	27
3.2.3	The Clausius–Mossotti and Lorentz–Lorenz–Equations	30
3.3	Probing Matter in Different Spectral Regions	35
4	Derivations from the Oscillator Model	37
4.1	Natural Linewidth	37
4.2	Extended Detail: Homogeneous and Inhomogeneous Line Broadening Mechanisms	38
4.3	Oscillators with More Than One Degree of Freedom	41
4.4	Sellmeier's and Cauchy's Formulae	42
4.5	Optical Properties of Mixtures	45
4.5.1	Motivation and Example from Practice	45

4.5.2	Extended Detail: The Maxwell Garnett, Bruggeman, and Lorentz–Lorenz Mixing Models	49
4.5.3	Extended Detail: Remarks on Surface Plasmons	53
4.5.4	Extended Detail: The Effect of Pores	56
5	The Kramers–Kronig Relations	61
5.1	Derivation of the Kramers–Kronig Relations	61
5.2	Some Conclusions	64
5.3	Resume from Chapters 2–5	66
5.3.1	Overview on Main Results	66
5.3.2	Problems	67
<hr/>		
Part II Interface Reflection and Interference Phenomena in Thin Film Systems		
<hr/>		
6	Planar Interfaces	71
6.1	Transmission, Reflection, Absorption, and Scattering	71
6.1.1	Definitions	71
6.1.2	Experimental Aspects	73
6.1.3	Remarks on the Absorbance Concept	75
6.2	The Effect of Planar Interfaces: Fresnel’s Formulae	76
6.3	Total Reflection of Light	84
6.3.1	Conditions of Total Reflection	84
6.3.2	Discussion	85
6.3.3	Attenuated Total Reflection ATR	86
6.4	Metal Surfaces	87
6.4.1	Metallic Reflection	87
6.4.2	Extended Detail: Propagating Surface Plasmons	91
6.5	Extended Detail: Anisotropic Materials	96
6.5.1	Interface Reflection Between an Isotropic and an Anisotropic Material	96
6.5.2	Giant Birefringent Optics	99
7	Thick Slabs and Thin Films	101
7.1	Transmittance and Reflectance of a Thick Slab	101
7.2	Thick Slabs and Thin Films	104
7.3	Spectra of Thin Films	107
7.4	Special Cases	110
7.4.1	Vanishing Damping	110
7.4.2	$\lambda/2$ -Layers	112
7.4.3	$\lambda/4$ -Layers	113
7.4.4	Free-Standing Films	115
7.4.5	A Single Thin Film on a Thick Substrate	116
7.4.6	Extended Detail: A Few More Words on Reverse Search Procedures	120

8	Extended Details: Gradient Index Films and Multilayers	125
8.1	Gradient Index Films	125
8.1.1	General Assumptions	125
8.1.2	s -Polarization	126
8.1.3	p -Polarization	128
8.1.4	Calculation of Transmittance and Reflectance	129
8.2	Multilayer Systems	134
8.2.1	The Characteristic Matrix	134
8.2.2	Characteristic Matrix of a Single Homogeneous Film	137
8.2.3	Characteristic Matrix of a Film Stack	137
8.2.4	Calculation of Transmittance and Reflectance	138
9	Special Geometries	141
9.1	Quarterwave Stacks and Derived Systems	141
9.2	Extended Detail: Remarks on Resonant Grating Waveguide Structures	145
9.2.1	General Idea	145
9.2.2	Propagating Modes and Grating Period	146
9.2.3	Energy Exchange Between the Propagating Modes	147
9.2.4	Analytical Film Thickness Estimation for a GWS	148
9.2.5	Remarks on GWS Absorbers	150
9.3	Resume from Chapters 6–9	151
9.3.1	Overview on Main Results	151
9.3.2	Examples	153
9.3.3	Problems	157

Part III Semiclassical Description of the Interaction of Light with Matter

10	Einstein Coefficients	163
10.1	General Remarks	163
10.2	Phenomenological Description	163
10.3	Mathematical Treatment	165
10.4	Extended Detail: Perturbation Theory of Quantum Transitions	167
10.5	Extended Detail: Planck's Formula	172
10.5.1	Idea	172
10.5.2	Planck's Distribution	173
10.5.3	Density of States	173
10.6	Extended Detail: Expressions for Einstein Coefficients in the Dipole Approximation	176
10.7	Lasers	180
10.7.1	Population Inversion and Light Amplification	180
10.7.2	Feedback	181

11 Semiclassical Treatment of the Dielectric Function	187
11.1 First Suggestions	187
11.2 Extended Detail: Calculation of the Dielectric Function by Means of the Density Matrix	188
11.2.1 The Interaction Picture	188
11.2.2 Introduction of the Density Matrix	190
11.2.3 Semiclassical Calculation of the Polarizability	195
12 Solid State Optics	199
12.1 Formal Treatment of the Dielectric Function of Crystals (Direct Transitions)	199
12.2 Joint Density of States	204
12.3 Indirect Transitions	208
12.4 Amorphous Solids	211
12.4.1 General Considerations	211
12.4.2 Tauc-Gap and Urbach-Tail	214
12.5 Resume from Chapters 10–12	218
12.5.1 Overview on Main Results	218
12.5.2 Problems	222
<hr/>	
Part IV Basics of Nonlinear Optics	
<hr/>	
13 Some Basic Effects of Nonlinear Optics	231
13.1 Nonlinear Susceptibilities: Phenomenological Approach	231
13.1.1 General Idea	231
13.1.2 Formal Treatment and Simple Second Order Nonlinear Optical Effects	233
13.1.3 Some Third Order Effects	240
13.2 Calculation Scheme for Nonlinear Optical Susceptibilities	242
13.2.1 Macroscopic Susceptibilities and Microscopic Hyperpolarizabilities	242
13.2.2 Density Matrix Approach for Calculating Optical Hyperpolarizabilities	243
13.2.3 Discussion	248
13.3 Resume from Chapter 13	252
13.3.1 Overview on Main Results	252
13.3.2 Problems	253
14 Summary	255
Bibliography	261
Index	271

The Physics of Thin Film Optical Spectra

An Introduction

Stenzel, O.

2005, XVI, 277 p., Hardcover

ISBN: 978-3-540-23147-9
