

Contents

1 General Characteristic of Control Systems.....	1
1.1 Subject and Scope of Control Theory.....	1
1.2 Basic Terms	2
1.2.1 Control Plant.....	4
1.2.2 Controller.....	6
1.3 Classification of Control Systems.....	7
1.3.1 Classification with Respect to Connection Between Plant and Controller.....	7
1.3.2 Classification with Respect to Control Goal.....	9
1.3.3 Other Cases	11
1.4 Stages of Control System Design	13
1.5 Relations Between Control Science and Related Areas in Science and Technology	14
1.6 Character, Scope and Composition of the Book.....	15
2 Formal Models of Control Systems.....	17
2.1 Description of a Signal	17
2.2 Static Plant	18
2.3 Continuous Dynamical Plant	19
2.3.1 State Vector Description.....	20
2.3.2 “Input-output” Description by Means of Differential Equation.....	24
2.3.3 Operational Form of “Input-output” Description.....	25
2.4 Discrete Dynamical Plant	29
2.5 Control Algorithm	31
2.6 Introduction to Control System Analysis.....	33
2.6.1 Continuous System	35
2.6.2 Discrete System	37
3 Control for the Given State (the Given Output).....	41
3.1 Control of a Static Plant.....	41
3.2 Control of a Dynamical Plant. Controllability.....	44
3.3 Control of a Measurable Plant in the Closed-loop System	47
3.4 Observability.....	50

3.5 Control with an Observer in the Closed-loop System	55
3.6 Structural Approach.....	59
3.7 Additional Remarks	62
4 Optimal Control with Complete Information on the Plant	65
4.1 Control of a Static Plant.....	65
4.2 Problems of Optimal Control for Dynamical Plants.....	69
4.2.1 Discrete Plant.....	69
4.2.2 Continuous Plant.....	72
4.3 Principle of Optimality and Dynamic Programming	74
4.4 Bellman Equation	79
4.5 Maximum Principle	85
4.6 Linear-quadratic Problem	93
5 Parametric Optimization	97
5.1 General Idea of Parametric Optimization	97
5.2 Continuous Linear Control System.....	99
5.3 Discrete Linear Control System.....	105
5.4 System with the Measurement of Disturbances.....	107
5.5 Typical Forms of Control Algorithms in Closed-loop Systems	110
5.5.1 Linear Controller.....	111
5.5.2 Two-position Controller	112
5.5.3 Neuron-like Controller.....	112
5.5.4 Fuzzy Controller	113
6 Application of Relational Description of Uncertainty	117
6.1 Uncertainty and Relational Knowledge Representation	117
6.2 Analysis Problem.....	122
6.3 Decision Making Problem	127
6.4 Dynamical Relational Plant	130
6.5 Determinization	136
7 Application of Probabilistic Descriptions of Uncertainty.....	143
7.1 Basic Problems for Static Plant and Parametric Uncertainty.....	143
7.2 Basic Problems for Static Plant and Non-parametric Uncertainty	152
7.3 Control of Static Plant Using Results of Observations.....	157
7.3.1 Indirect Approach	158
7.3.2 Direct Approach.....	164
7.4 Application of Games Theory.....	165
7.5 Basic Problem for Dynamical Plant.....	170
7.6 Stationary Stochastic Process	174

7.7 Analysis and Parametric Optimization of Linear Closed-loop Control System with Stationary Stochastic Disturbances.....	178
7.8 Non-parametric Optimization of Linear Closed-loop Control System with Stationary Stochastic Disturbances.....	183
7.9 Relational Plant with Random Parameter.....	188
8 Uncertain Variables and Their Applications.....	193
8.1 Uncertain Variables	193
8.2 Application of Uncertain Variables to Analysis and Decision Making (Control) for Static Plant.....	201
8.2.1 Parametric Uncertainty	201
8.2.2 Non-parametric Uncertainty	205
8.3 Relational Plant with Uncertain Parameter.....	211
8.4 Control for Dynamical Plants. Uncertain Controller	216
9 Fuzzy Variables, Analogies and Soft Variables	221
9.1 Fuzzy Sets and Fuzzy Numbers.....	221
9.2 Application of Fuzzy Description to Decision Making (Control) for Static Plant.....	228
9.2.1 Plant without Disturbances	228
9.2.2 Plant with External Disturbances.....	233
9.3 Comparison of Uncertain Variables with Random and Fuzzy Variables.....	238
9.4 Comparisons and Analogies for Non-parametric Problems	242
9.5 Introduction to Soft Variables.....	246
9.6 Descriptive and Prescriptive Approaches. Quality of Decisions	249
9.7 Control for Dynamical Plants. Fuzzy Controller	255
10 Control in Closed-loop System. Stability	259
10.1 General Problem Description.....	259
10.2 Stability Conditions for Linear Stationary System	264
10.2.1 Continuous System	264
10.2.2 Discrete System	266
10.3 Stability of Non-linear and Non-stationary Discrete Systems	270
10.4 Stability of Non-linear and Non-stationary Continuous Systems	277
10.5 Special Case. Describing Function Method.....	278
10.6 Stability of Uncertain Systems. Robustness	282
10.7 An Approach Based on Random and Uncertain Variables.....	291
10.8 Convergence of Static Optimization Process.....	295
11 Adaptive and Learning Control Systems	299
11.1 General Concepts of Adaptation.....	299

11.2 Adaptation via Identification for Static Plant	303
11.3 Adaptation via Identification for Dynamical Plant	309
11.4 Adaptation via Adjustment of Controller Parameters	311
11.5 Learning Control System Based on Knowledge of the Plant	313
11.5.1 Knowledge Validation and Updating	314
11.5.2 Learning Algorithm for Decision Making in Closed-loop System	317
11.6 Learning Control System Based on Knowledge of Decisions	319
11.6.1 Knowledge Validation and Updating	319
11.6.2 Learning Algorithm for Control in Closed-loop System	321
12 Intelligent and Complex Control Systems	327
12.1 Introduction to Artificial Intelligence	327
12.2 Logical Knowledge Representation	328
12.3 Analysis and Decision Making Problems	332
12.4 Logic-algebraic Method	334
12.5 Neural Networks	341
12.6 Applications of Neural Networks in Control Systems	346
12.6.1 Neural Network as a Controller	346
12.6.2 Neural Network in Adaptive System	348
12.7 Decomposition and Two-level Control	349
12.8 Control of Complex Plant with Cascade Structure	355
12.9 Control of Plant with Two-level Knowledge Representation	358
13 Control of Operation Systems	363
13.1 General Characteristic	363
13.2 Control of Task Distribution	365
13.3 Control of Resource Distribution	371
13.4 Control of Assignment and Scheduling	375
13.5 Control of Allocation in Systems with Transport	382
13.6 Control of an Assembly Process	386
13.7 Application of Relational Description and Uncertain Variables	391
13.8 Application of Neural Network	398
Conclusions	401
Appendix	405
References	411
Index	419
