| <b>1</b> | <b>Resorcinol Structure and Physical Properties</b>           | <b>1</b>  |
| 1.1      | Introduction  | 1         |
| 1.2      | Crystalline Structure and Polymorphism                        | 2         |
| 1.3      | Tautomeric Form of Resorcinol                                 | 2         |
| 1.4      | Physical Properties of Resorcinol                             | 3         |
| 1.4.1    | Vapor Pressure Data   | 3         |
| 1.4.2    | Melt Viscosity Data   | 4         |
| 1.4.3    | Solubility of Resorcinol in Solvents                          | 4         |
| 1.4.4    | Weight Loss of Resorcinol                                     | 4         |
| 1.4.5    | Spectral Data of Resorcinol                                   | 6         |
| 1.5      | General Properties of Resorcinol                              | 7         |
| 1.6      | Resorcinol Specifications                                     | 8         |
|          | References  | 8         |
| <b>2</b> | <b>Manufacturing Processes for Resorcinol</b>                 | <b>11</b> |
| 2.1      | Resorcinol by the Benzenedisulfonation Process                | 12        |
| 2.1.1    | Introduction  | 12        |
| 2.1.2    | Disulfonation of Benzene                                      | 12        |
| 2.1.3    | Neutralization and Sodium Sulfate Recovery                    | 13        |
| 2.1.4    | Alkali Fusion of Disalt                                       | 14        |
| 2.1.5    | Acidification of Fusion Mixture                               | 14        |
| 2.1.6    | Extraction and Distillation                                   | 15        |
| 2.2      | Hydrolysis of <i>meta</i> -Phenylenediamine (MPDA) Process    | 15        |
| 2.2.1    | Introduction  | 15        |
| 2.2.2    | MPDA Hydrolysis Processes Developed                           | 15        |
| 2.2.3    | Major Problems in MPDA Hydrolysis Process                     | 17        |
| 2.2.4    | Newer Process for MPDA Hydrolysis                             | 17        |
| 2.2.5    | MPDA Hydrolysis Using Sulfuric Acid                           | 18        |
| 2.2.6    | Single Pass MPDA Hydrolysis Process                           | 19        |
| 2.2.7    | Double Pass MPDA Hydrolysis Process                           | 20        |
| 2.3      | Hydroperoxidation of <i>m</i> -Diisopropylbenzene Process     | 22        |
| 2.3.1    | Introduction  | 22        |
| 2.3.2    | Hydroperoxidation Process                                     | 23        |
| 2.3.3    | Preparation of <i>m</i> -Diisopropylbenzene ( <i>m</i> -DIPB) | 23        |
| 2.3.4    | Oxidation of <i>m</i> -Diisopropylbenzene                     | 24        |

|          |  |           |
|----------|--|-----------|
| 2.3.5    | Separation and Recovery of Dihydroperoxide (DHP) . . . . . | 26        |
| 2.3.6    | Production of Resorcinol from DHP Cleavage . . . . .       | 29        |
| 2.3.7    | Distillation and Recovery . . . . .                        | 31        |
| 2.3.8    | Manufacture of Dicarbinol (DCL) from HHP . . . . .         | 31        |
| 2.3.9    | Summary and Future Outlook . . . . .                       | 33        |
|          | References . . . . .                                       | 33        |
