## Contents

<b>Preface</b> .....	VII
<b>1 Introduction to Cryptocomplexity</b> .....	1
<b>2 Foundations of Computer Science and Mathematics</b> .....	9
2.1 Algorithmics .....	9
2.2 Formal Languages and Recursive Function Theory .....	16
2.3 Logic .....	29
2.3.1 Propositional Logic .....	29
2.3.2 Predicate Logic .....	34
2.4 Algebra, Number Theory, and Graph Theory .....	37
2.4.1 Algebra and Number Theory .....	37
2.4.2 Permutation Groups .....	41
2.4.3 Graph Theory .....	43
2.5 Probability Theory .....	46
2.6 Exercises and Problems .....	47
2.7 Summary and Bibliographic Remarks .....	51
<b>3 Foundations of Complexity Theory</b> .....	53
3.1 Tasks and Aims of Complexity Theory .....	53
3.2 Complexity Measures and Classes .....	56
3.3 Speed-Up, Compression, and Hierarchy Theorems .....	63
3.4 Between Logarithmic and Polynomial Space .....	72
3.5 Reducibilities and Completeness .....	77
3.5.1 Many-One Reducibilities, Hardness, and Completeness ....	77
3.5.2 NL-Completeness .....	81
3.5.3 NP-Completeness .....	88
3.6 Inside NP .....	106
3.6.1 P versus NP and the Graph Isomorphism Problem .....	106
3.6.2 The Berman–Hartmanis Isomorphism Conjecture and One-Way Functions .....	108

3.7	Exercises and Problems	114
3.8	Summary and Bibliographic Remarks	118
<b>4</b>	<b>Foundations of Cryptology</b>	127
4.1	Tasks and Aims of Cryptology	127
4.2	Some Classical Cryptosystems and Their Cryptanalysis	130
4.2.1	Substitution and Permutation Ciphers	130
4.2.2	Affine Linear Block Ciphers	135
4.2.3	Block and Stream Ciphers	145
4.3	Perfect Secrecy	151
4.3.1	Shannon's Theorem and Vernam's One-Time Pad	151
4.3.2	Entropy and Key Equivocation	155
4.4	Exercises and Problems	161
4.5	Summary and Bibliographic Remarks	168
<b>5</b>	<b>Hierarchies Based on NP</b>	171
5.1	Boolean Hierarchy over NP	172
5.2	Polynomial Hierarchy	190
5.3	Parallel Access to NP	201
5.3.1	A Brief Digression to Social Choice Theory	206
5.3.2	Determining Young Winners Is Complete for Parallel Access to NP	208
5.4	Query Hierarchies over NP	212
5.5	The Boolean Hierarchy Collapsing the Polynomial Hierarchy	217
5.6	Alternating Turing Machines	221
5.7	The Low and the High Hierarchy within NP	232
5.8	Exercises and Problems	241
5.9	Summary and Bibliographic Remarks	248
<b>6</b>	<b>Randomized Algorithms and Complexity Classes</b>	261
6.1	The Satisfiability Problem of Propositional Logic	262
6.1.1	Deterministic Time Complexity	263
6.1.2	Probabilistic Time Complexity	265
6.2	Probabilistic Polynomial-Time Classes	268
6.2.1	PP, RP, and ZPP: Monte Carlo and Las Vegas Algorithms	268
6.2.2	BPP: Bounded-Error Probabilistic Polynomial Time	275
6.3	Quantifiers and Arthur-Merlin Games	279
6.3.1	Quantifiers and BPP	279
6.3.2	Arthur-Merlin Hierarchy	286
6.4	Counting Classes	290
6.5	Graph Isomorphism and Lowness	294
6.5.1	Graph Isomorphism Is in the Low Hierarchy	294
6.5.2	Graph Isomorphism Is in SPP	298
6.6	Exercises and Problems	302
6.7	Summary and Bibliographic Remarks	306

<b>7</b>	<b>RSA Cryptosystem, Primality, and Factoring</b>	311
7.1	RSA	312
7.1.1	RSA Public-Key Cryptosystem	312
7.1.2	RSA Digital Signature Scheme	316
7.2	Primality Tests	317
7.2.1	Fermat Test	319
7.2.2	Miller–Rabin Test	323
7.2.3	Solovay–Strassen Test	329
7.2.4	Primality Is in P	335
7.3	Factoring	335
7.3.1	Trial Division	336
7.3.2	Pollard’s Algorithm	337
7.3.3	Quadratic Sieve	338
7.3.4	Other Factoring Methods	343
7.4	Security of RSA: Possible Attacks and Countermeasures	345
7.5	Exercises and Problems	353
7.6	Summary and Bibliographic Remarks	357
<b>8</b>	<b>Other Public-Key Cryptosystems and Protocols</b>	361
8.1	Diffie–Hellman and the Discrete Logarithm Problem	362
8.1.1	Diffie and Hellman’s Secret-Key Agreement Protocol	362
8.1.2	Discrete Logarithm and the Diffie–Hellman Problem	366
8.2	ElGamal’s Protocols	369
8.2.1	ElGamal’s Public-Key Cryptosystem	369
8.2.2	ElGamal’s Digital Signature Scheme	371
8.2.3	Security of ElGamal’s Protocols	373
8.3	Rabin’s Public-Key Cryptosystem	380
8.3.1	Rabin’s Cryptosystem	381
8.3.2	Security of Rabin’s System	383
8.4	Arthur–Merlin Games and Zero-Knowledge	386
8.5	Merkle and Hellman’s Public-Key Cryptosystem	393
8.6	Rabin, Rivest, and Sherman’s Protocols	396
8.7	Exercises and Problems	402
8.8	Summary and Bibliographic Remarks	408
	<b>List of Figures</b>	413
	<b>List of Tables</b>	415
	<b>References</b>	417
	<b>Index</b>	444

Complexity Theory and Cryptology  
An Introduction to Cryptocomplexity

Rothe, J.

2005, XII, 478 p., Hardcover

ISBN: 978-3-540-22147-0
