

Contents

1	A Summary of Observed Data and Pre-Amble	1
1.1	Introduction	1
1.2	Half-Lives and Spontaneous Decay	2
1.3	Induced Fission	3
1.4	Mass, Charge and Average Total Kinetic Energy Distribution	7
1.5	Cooling of Daughter Pairs	9
1.6	Ternary and Quaternary Fission	11
1.7	Fission Isomers	14
1.8	Cold Fission	15
1.9	Cluster Radioactivity	16
1.10	Pre-Amble	17
	References	19
2	Energy-Density Functional Formalism and Nuclear Masses	23
2.1	Introduction	23
2.2	The Energy-Density Functional for Nuclei	25
2.3	Conclusion	29
	References	31
3	The Decay Process, Fission Barrier, Half-Lives, and Mass Distributions in the Energy-Density-Functional Approach	33
3.1	Introduction	33
3.2	Theory	36
3.2.1	Expression for the Fission Decay Probability	36
3.2.2	Determination of the Pre-Formation Probability	39
3.2.3	The Influence of the Residual Interaction on the Pre-Formation Probability	41
3.3	Calculation of the Potential Energy Surface and Half-Lives	43
3.4	Results and Discussion	50
3.4.1	The Potential Energy Surface	50

3.4.2	Half-Lives	54
3.5	Conclusion	58
	References	58
4	Spontaneous Fission Half-Lives of Fermium and Super-Heavy Elements	61
4.1	Introduction	61
4.2	Determination of Asymptotic Kinetic Energy	63
4.3	Spontaneous Fission of ^{258}Fm	64
4.4	The Potential-Energy Surface and Half-Lives of Superheavy Elements	65
4.5	Conclusion	70
	References	70
5	Empirical Barrier and Spontaneous Fission	73
5.1	Introduction	73
5.2	The Nature of the Empirical Barrier	74
5.3	Empirical Formula for Kinetic Energy	80
5.4	Spontaneous Fission Half-Lives, Mass and Charge Spectra	81
5.4.1	Spontaneous Fission Half-Lives	81
5.4.2	Mass Spectra	82
5.4.3	Charge Distribution	86
5.5	Conclusion	90
	References	91
6	Induced Fission	93
6.1	Introduction	93
6.2	Theory	94
6.2.1	Cross Section and Decay Probabilities	94
6.2.2	Calculation of the Most Probable Kinetic Energy, TKE	98
6.3	Applications	99
6.3.1	Neutron Induced Fission	101
6.3.1a	Neutron Induced Fission of ^{233}U	101
6.3.1b	Neutron Induced Fission of ^{235}U	104
6.3.1c	Neutron Induced Fission of ^{239}Pu	105
6.3.1d	Neutron Induced Fission of ^{229}Th	107
6.3.1e	Fission Widths	107
6.3.2	Test of Compound Nucleus Formation Hypothesis	108
6.3.3	Alpha-Induced Fission	109
6.3.4	Alpha-Particle Induced Fission of ^{226}Ra	109
6.3.5	Alpha-Particle Induced Fission of ^{232}Th	111
6.4	The Role of the Barrier and the Shape of the Yield-Spectrum	112

6.5	Conclusion	115
	References	116
7	Hot and Cold Fission	119
7.1	Introduction	119
7.2	Summary of Data Pointing to Hot and Cold Fission	120
7.3	Theory and Discussion	123
7.4	Odd-Even Effect	131
7.5	Conclusion	133
	References	133
8	Isomer Fission	135
8.1	Introduction	135
8.2	The Shell Correction and Shape Isomers	136
8.3	Half-Lives, Mass Yields and Kinetic Energy Spectra	142
8.4	Conclusion	150
	References	150
9	Cluster Radioactivity	153
9.1	Introduction	153
9.2	Models Based on the Gamow-Condon-Gurney Approach	156
9.3	The Quasi-Stationary State Model	160
9.4	The Energy-Density Functional Approach	162
9.5	The Surface-Cluster Model	164
9.6	Conclusion	170
	References	172
A	The Relation Between the Asymptotic Kinetic Energy, and the Condition for the Existence of a Meta-Stable State	175
	References	178
B	The Expression for Half-Lives of Particles Tunneling Through the Barrier Shown in Fig. A.2	179
B.1	Exact Expression	179
B.2	JWKB Approximation	181
	References	183
C	Diagonalization of the Coupled Set of Equations Describing Fission	185
	References	187

Nuclear Fission and Cluster Radioactivity

An Energy-Density Functional Approach

Hooshyar, M.A.; Reichstein, I.; Malik, F.B.

2005, XII, 200 p., Hardcover

ISBN: 978-3-540-23302-2
