
Contents

1	Setting the Stage for Structured Populations	1
1.1	Useful Definitions for Graphs	2
1.2	Main Graph Structures of Populations	5
1.2.1	Island or Multipopulation Models	6
1.2.2	Cellular Models	7
1.2.3	Other Topologies	8
2	Island Models	11
2.1	History and Background	11
2.2	Homogeneous and Heterogeneous Islands	14
2.3	Theoretical Results	14
2.4	Asynchronous Islands	17
3	Island Models: Empirical Properties	19
3.1	An Experimental Investigation	19
3.2	Description of the Test Problems	19
3.3	Multipopulation GP Parameters	20
3.4	Performance Measures and Statistics	21
3.5	Number of Subpopulations and Their Size	23
3.5.1	Isolated Populations vs. Standard GP	23
3.5.2	Communicating Islands vs. Standard GP	27
3.6	Comparing Communication Topologies	30
3.7	Migration Parameters	33
3.8	Summary of Case Study	37
3.9	The Role of Diversity	37
3.9.1	Diversity Measures	38
3.9.2	Experimental Results	40
3.9.3	Summary	44
3.10	Asynchronous Island Models	44
3.10.1	Experimental Results	46

4	Lattice Cellular Models	53
4.1	Takeover Time	54
4.2	Synchronous cEAs	55
4.3	The Time Dimension: Asynchronous cEAs	57
4.4	Models and Their Validation	59
4.5	Mathematical Models	59
4.5.1	Limitations of Logistic Modeling	60
4.5.2	The Ring Structure	62
4.5.3	The Torus Structure	66
4.6	Experimental Validation	70
4.6.1	Ring Structure	70
4.6.2	Torus Structure	73
4.7	Rectangular Toroidal Structures	76
4.7.1	Validation of the Rectangular Toroidal Models	78
4.8	Varying the Radius	79
4.9	Summary	80
5	Lattice Cellular Models: Empirical Properties	85
5.1	cGA Case Study	85
5.2	Varying the Lattice Shape	86
5.3	Selection Pressure, Grid Shape and Time	87
5.4	Test Suite	88
5.4.1	Discrete Optimization Problems	90
5.4.2	Experimental Analysis	93
5.4.3	Continuous Optimization Problems	96
5.4.4	Experimental Analysis	97
5.5	Cellular Genetic Programming	100
5.5.1	Experimental Results	100
5.5.2	Fitness Evolution	100
5.5.3	Diversity Evolution	101
5.6	Summary	104
6	Random and Irregular Cellular Populations	107
6.1	Random Graphs	108
6.2	Selection Intensity in Random Cellular Populations	109
6.3	Experimental Results	111
6.4	Small-World Networks	113
6.4.1	Some Graph Statistics	116
6.4.2	The Watts–Strogatz Model	118
6.4.3	The Barabási–Albert Model	119
6.5	Selection Intensity in Small-World Networks	120
6.5.1	Watts–Strogatz Model	120
6.5.2	Barabási–Albert Model	122
6.6	Summary	124

7	Coevolutionary Structured Models	125
7.1	What Is Coevolution?	125
7.2	Cooperative Coevolution	126
7.3	Competitive Coevolution: Hosts and Parasites	127
7.4	A Case Study: Coevolution of Cellular Automata	130
7.4.1	Cellular Automata	131
7.4.2	The Majority Task	131
7.5	Artificial Evolution of CAs for the Majority Task	133
7.5.1	Coevolving Uniform CAs for the Majority Task	134
7.5.2	Coevolving Nonuniform CAs for the Majority Task	137
7.5.3	Results for the Density Task	139
7.6	Summary	141
8	Some Nonconventional Models	143
8.1	Nonconventional Island Models	144
8.1.1	The Injection Island Model	144
8.1.2	Islands with Variable Population Size	145
8.2	Nonconventional Cellular Models	151
8.2.1	The Patchwork Model	152
8.2.2	Dynamic Neighborhoods in Cellular Evolution Strategies	153
A	Implementation Notes	157
A.1	Computing Environment	158
A.1.1	MPI	158
A.2	Implementation of Island EAs	159
A.2.1	Synchronous Islands	159
A.2.2	Asynchronous Islands	165
A.2.3	Summary	168
A.3	Implementation of Lattice Cellular EAs	168
A.3.1	Synchronous Cellular EAs	168
A.3.2	Asynchronous Cellular EAs	170
A.4	Performance Measures and Speedup	170
A.5	A Remark on Pseudorandom Number Generators	173

Spatially Structured Evolutionary Algorithms

Artificial Evolution in Space and Time

Tomassini, M.

2005, XIII, 193 p., Hardcover

ISBN: 978-3-540-24193-5
