## Contents

<b>Introduction</b>	1
<b>1 Absolute Values</b>	5
1.1 Absolute Values – Completions	5
1.2 Archimedean Complete Fields	12
1.3 Non-Archimedean Complete Fields	18
<b>2 Valuations</b>	25
2.1 Ordered Abelian Groups – Valuations	25
2.2 Constructions of Valuations	31
2.2.1 Rational Function Fields	31
2.2.2 Ordered Fields	36
2.2.3 Rigid Elements	39
2.3 Dependent Valuations – Induced Topology	42
2.4 Approximation – Completion	48
2.5 Exercises	55
<b>3 Extension of Valuations</b>	57
3.1 Chevalley’s Extension Theorem	57
3.2 Algebraic Extensions	60
3.3 The Fundamental Inequality	71
3.4 Transcendental Extensions	78
3.5 Exercises	82
<b>4 Henselian Fields</b>	85
4.1 Henselian Fields	86
4.2 $p$ -Henselian Fields	93
4.3 Ordered Henselian Fields	99
4.4 The Canonical Henselian Valuation	103
4.5 Exercises	110

<b>5</b>	<b>Structure Theory</b> .....	113
5.1	Infinite Galois Groups .....	114
5.2	Unramified Extensions – First Exact Sequence .....	120
5.3	Ramified Extensions – Second Exact Sequence .....	126
5.4	Galois Characterization of Henselian Fields .....	136
5.5	Exercises .....	147
<b>6</b>	<b>Applications of Valuation Theory</b> .....	149
6.1	Artin’s Conjecture .....	149
6.2	$p$ -Adically Closed Fields .....	156
6.3	A Local-Global Principle for Quadratic Forms .....	163
<b>A</b>	<b>Ultraproducts of Valued Fields</b> .....	173
<b>B</b>	<b>Classification of <math>V</math>-Topologies</b> .....	187
	<b>References</b> .....	199
	<b>Standard Notations</b> .....	201
	<b>Index</b> .....	203

Valued Fields

Engler, A.J.; Prestel, A.

2005, X, 208 p., Hardcover

ISBN: 978-3-540-24221-5
