	List of Acronyms	
0	Executive summary (M. Hantel)	1
1	Quantifying global climate systems (M. Hantel)	7
1.1	Introduction	7
1.2	The global climate system and its subsystems	8
1.3	Climate phenomena	10
1.3.1	Large-scale climate phenomena	11
1.3.2	Regional climate phenomena	12
1.3.3	Local climate phenomena	13
1.4	Climate mechanisms	14
1.5	Non-budget climate elements	16
1.5.1	Field climate elements	16
1.5.2	Complex climate elements	17
1.6	The concept of budget climatology	17
1.6.1	The budget principle	18
1.6.2	General properties of the budget quantities	20
1.6.3	Bulk and spectral state quantities	23
1.6.4	Flux vector, flux components and flux divergence	23
1.7	Non-advective fluxes in the climate system	25
1.7.1	Radiation flux	26
1.7.2	Soil heat flux	29
1.7.3	Diffusive fluxes	29
1.8	Advective fluxes in the climate system	29
1.8.1	The scale problem	30
1.8.2	Gridscale and sub-gridscale advective fluxes	30
1.8.3	Turbulent fluxes	31
1.8.4	The flux quantity precipitation	33
1.9	Conversion quantities in the climate system	33
1.9.1	Energy conversion quantities	34
1.9.2	Water conversion quantities	34
1.9.3	Chemical conversion quantities	34
1.10	Continuity of the total flux vector	34
1.11	Climate surfaces and climate layers	35
1.11.1	The air-sea interface	35
1.11.2	The canopy layer	36
1.12	Categorization of global budgets	37
1.13	Aspects of the global climatic water budget	39
1.13.1	A global box budget	39

1.13.2	The zonal mean water budget	39
1.14	Aspects of the global climatic energy budget	42
1.14.1	Zero-dimensional energy budgets	42
1.14.2	One-dimensional energy budgets	43
1.15	Final remarks	45
1.16	References for 1	45
2	The processing of observational data and its implication for climate analysis (A. Hense)	50
2.1	Introduction	50
2.2	Stochastic aspects	50
2.2.1	The stochastic elements	50
2.2.2	Sampling and ergodicity	51
2.2.3	Dimension reduction	52
2.3	Data modeling	54
2.3.1	Processing <i>in situ</i> measurements	55
2.3.2	Processing remote sensing measurements	55
2.3.3	Practical implementations	56
2.4	Stationarity and predictability	59
2.5	References for 1.2	60
3	Data management (F. Rubel, M. Kottek)	61
3.1	Introduction	61
3.2	The digital data archive	63
3.2.1	Description of the data sets	63
3.2.2	Description of the digital data files	70
3.2.3	Description of the pictures and movies	72
3.2.4	Description of the global climate maps 1991-1995	72
3.3	Selected features of the global climate depicted in the animate data	72
3.3.1	The South Pacific convergence zone (SPCZ)	72
3.3.2	The northern hemisphere sea ice concentration	74
3.3.3	The Gulf Stream as depicted by the latent heat flux	75
3.4	References for 1.3	76
4	Radiation budget of the climate system (E. Raschke, A. Ohmura)	79
4.1	Introduction and conventions	80
4.2	Radiative transfer in the atmosphere	81
4.2.1	A few basic facts of radiative transfer in continua	81
4.2.2	Radiatively active components in the climate system	82
4.2.3	Absorption and scattering in the clear and turbid atmosphere	82
4.2.4	Major radiative transfer codes and data libraries ready for use	84
4.2.5	The atmospheric greenhouse effect	84
4.3	An overview on the radiation budget of the climate system	85
4.3.1	Annual budget	85
4.3.2	Solar radiation	85
4.3.3	Radiation budget at the top of the atmosphere (TOA)	88
4.3.4	Radiation Budget at Ground	97
4.3.5	Vertical radiative flux divergence in the atmosphere	107
4.3.6	The Global Annual Budget and a Preliminary Error Discussion	112
4.4	Photosynthetically Active Radiation (PAR) and Ultraviolet Radiation (UV) at Ground	116
4.4.1	PAR	116

4.4.2	Ultraviolet radiation at ground	118
4.4.3	Radiation in snow and upper water body layers	119
4.5	A few final remarks	122
4.6	References for 4	124
	Appendix: Seasonal maps of all radiation quantities	129
1	Radiation budget components at the top of the atmosphere (TOA)	130
2	Radiation budget components at ground	146
3	Radiant flux divergence in the atmosphere	168
4	Photosynthetically Active Radiation and Ultraviolet-B	180
5	Water vapor in the atmosphere (E. Raschke, C. Stubenrauch)	186
5.1	Importance of water vapor in climate	185
5.2	Abundance in the atmosphere	187
5.3	Determination of atmospheric water vapor	189
5.3.1	Overview	189
5.3.2	Radiosondes	191
5.3.3	Satellite sensors	192
5.3.4	Combination of different sources: The NASA Water Vapor Project	194
5.3.5	Other projects	194
5.4	Global distributions	195
5.4.1	Examples from different projects	195
5.4.2	Global average of atmospheric water vapor	197
5.4.3	Regional and seasonal variations	198
5.5	Final remarks	204
5.6	References for 5	205
6	Clouds (C. Stubenrauch)	207
6.1	Introduction	207
6.1.1	Importance of clouds in climate	207
6.1.2	Cloud formation and cloud types	208
6.1.2	Circulation of the atmosphere and resulting cloud structures	209
6.1.3	Large-scale ocean-atmosphere interactions	210
6.2	Space observations of cloud physical properties	211
6.2.1	Long-term climatologies	212
6.2.2	Cloud properties from other space-borne instruments	218
6.3	Cloud physical properties	220
6.3.1	Average cloud properties	220
6.3.2	Regional distributions and seasonal variations	222
6.3.3	Diurnal variations	232
6.4	Final remarks	232
6.5	References for 6	232
7	Global chemistry (L. Emmons, C. Granier, G. Brasseur)	234
7.1	Importance of chemistry for climate	234
7.2	Measurements of chemical species	235
7.2.1	Satellites	236
7.2.2	Ground-based remote sensing	238
7.2.3	In situ measurements	238
7.2.4	Ozonesondes	239
7.3	Data and example plots	239

7.3.1	Ozone column	239
7.3.2	Greenhouse gases	241
7.3.3	Tropospheric ozone and precursors	242
7.4	Global budgets of chemical compounds	243
7.5	References for 7	245
8	Global aerosols (R. Jaenicke)	247
8.1	Climatic relevance of atmospheric aerosols	247
8.2	Recommended observations for atmospheric aerosols	248
8.3	Source strength	248
8.4	Optical depth	250
8.5	References	255
9	Circulation of the global atmosphere (L. Haimberger)	256
9.1	Introduction	256
9.2	The basic budget equations	258
9.2.1	General characteristics of budget equations	258
9.2.2	Averaging of the budget equations	259
9.2.3	Mass budget equations	261
9.2.4	Water vapour budget equations	261
9.2.5	Dry enthalpy budget equation	263
9.2.6	Moist enthalpy budget equation	264
9.2.7	Potential energy budget equation	264
9.2.8	Kinetic energy budget equation	265
9.2.9	Total energy budget equation	265
9.2.10	Lorenz's energy cycle	266
9.3	Short description of ERA-40 data	268
9.4	Numerical and quality issues for budget calculations	271
9.5	The mass budget of the atmosphere	271
9.6	The water budget	273
9.7	The dry and moist enthalpy budget	276
9.8	The kinetic energy budget	280
9.9	The total energy budget	282
9.10	Lorenz's energy cycle	286
9.11	Outlook	288
9.12	References for 9	289
	A Appendix of Chapter 9	292
	A.1 Treatment of the ERA-40 data	292
	A.1.1 Horizontal interpolation	292
	A.1.2 Vertical interpolation	293
	A.2 The angular momentum budget	295
	A.2.1 Angular momentum budget equations	295
	A.2.2 Angular momentum fluxes from ERA-40 data	296
	A.3 Figures of mass budget	301
	A.4 Figures of water budget	307
	A.5 Figures of heat budget	317
	A.6 Figures of kinetic energy budget	333
	A.7 Figures of the total energy budget	338
	A.7.1 The total energy flux stream function	341

	A.8 Figures of Lorenz energy cycle	345
10	Energy budget at the earth's surface (A. Ohmura, E. Raschke)	350
10.1	Introduction	350
10.2	Earth's surface and active layer	350
10.3	Processes of energy transformation at the surface	351
10.4	Non-radiative energy fluxes	352
10.4.1	Turbulent fluxes of sensible and latent heat	353
10.4.2	Subsurface heat flux	363
10.4.3	Latent heat of fusion	364
10.5	The mean state of the radiation and energy budget of the earth	366
10.6	The ETH-Zürich global databases for energy balance	368
10.7	Conclusion	375
10.8	References for 10	375
	Appendix for 10: Radiation and heat fluxes measured at the earth's surface	380
11	Global Precipitation (B. Rudolf, F. Rubel)	381
11.1	Introduction	381
11.1.1	Review of global mean precipitation climatologies	381
11.1.2	Precipitation as a component of the global water and energy cycle	382
11.1.3	Definition of measured quantities and commonly used terms and units	384
11.2	In situ observation techniques for precipitation	385
11.2.1	The systematic gauge measurement error	387
11.2.2	The calculation of areal mean precipitation and sampling error	389
11.3	Ground-based remote sensing: Precipitation radar networks	391
11.4	Space-borne remote sensing: Satellite observations of precipitation	393
11.4.1	Determination of precipitation from observed infrared radiation data	393
11.4.2	Determination of precipitation from observed microwave radiation data	394
11.4.3	Comparison of various satellite-based precipitation estimates	395
11.5	Combination of satellite and in situ measured precipitation data	396
11.6	Spatial structure of global precipitation	397
11.6.1	Variability of annual and seasonal precipitation on global scale	397
11.6.2	Zonal profiles	399
11.6.3	Anomalies of global precipitation (ENSO)	400
11.7	Global climate change and precipitation	402
11.8	Final remarks	403
11.9	References for 11	404
	Appendix for 11	408
	Annex 11-A1: Spatio-temporal distribution of global precipitation	409
	Annex 11-A2: Complementary global precipitation products for the period 1991-1995	423
	Annex 11-A3: ENSO precipitation and anomalies	429
12	Terrestrial carbon and water fluxes . (Gerten, U. Haberlandt, W. Cramer, M. Erhard)	434
12.1	Introduction – hydrosphere and biosphere in the global climate system	434
12.1.1	The global water cycle	434
12.1.2	The global carbon cycle	436
12.2	Constraints and drivers for hydrologic and biospheric processes	438
12.2.1	Constraints for the structure of land vegetation, and drivers for fluxes between land vegetation and the atmosphere	438
12.2.2	Models as integrative tools for the assessment of global fluxes	439
12.3	Fluxes of water between land and atmosphere	440

12.3.1	Flux components – observations versus modelling	440
12.3.2	Vertical fluxes of water in the soil-vegetation-atmosphere system	441
12.3.3	Lateral fluxes of water from land to the oceans	443
12.4	Fluxes of carbon between the biosphere and the atmosphere	448
12.4.1	Quantifying fluxes between land biosphere and atmosphere	448
12.4.2	Observed trends and budgets	451
12.5	References and data sources for 12	451
13	Flow and balance of the polar ice sheets (P. Huybrechts, H. Miller)	454
13.1	Introduction	454
13.2	Physiogeographic setting and characteristics	454
13.2.1	Configuration	454
13.2.2	Geometric datasets	455
13.2.3	Sizes and volumes	457
13.2.4	Surface climate	458
13.2.5	Flow of ice sheets	460
13.3	Balance flow	461
13.4	Mass budget	463
13.5	Outlook	464
13.6	References	465
14	Global ocean and sea ice (K.-P. Koltermann, J. Meincke, V. Gouretski)	467
14.0	Introduction	467
14.1	Definitions and data sets	468
14.1.1	The WOCE Global Hydrographic Climatology WGHC	470
14.1.2	Estimates from the global assimilation project ECCO	473
14.1.3	Sea ice	475
14.1.4	The bathymetry data set ETOPO5	475
14.2	Large scale climate forcing	477
14.3	Global averages	477
14.3.1	Main Mean Properties	478
14.3.2	Vertical structure of the ocean	478
14.4	Global horizontal distributions	480
14.4.1	Sea surface topography	480
14.4.2	Temperature	485
14.4.3	Salinity	486
14.4.4	Potential density	487
14.4.5	Oxygen content	488
14.4.6	Silicate	489
14.5	The flow field	490
14.5.1	The baroclinic velocity field	491
14.5.2	The Ekman velocity field	494
14.5.3	The barotropic velocity field	496
14.6	Sea ice distribution	498
14.6.1	The ERA-40 climatology	498
14.6.2	The ISLSCP 2 climatology	500
14.7	Temporal changes of the ocean constituents	501
14.7.1	Local variability at the ocean surface	504
14.8	Forcing fields at the ocean surface	505

14.8.1	Wind stress forcing	506
14.8.2	Freshwater flux	507
14.8.3	Heat flux	509
14.9	Acknowledgements and References	512
14.9.1	Acknowledgements	512
14.9.2	References for 14	512
15	Climate variations (C.-D. Schönwiese)	515
15.1	Introduction	515
15.2	Information sources	517
15.3	Climate variations within the pre-instrumental interval	518
15.4	Temperature variations within the instrumental period	523
15.5	Precipitation variations within the instrumental period	527
15.6	Climate variations in terms of circulation indices	531
15.7	Possible causes of climate variations	532
15.6	Glossary	534
15.7	References for 15	536
15.8	Internet links to institutions providing information on climate variations	539
16	Climate predictability (M. Ehrendorfer)	540
16.1	The predictability issue	540
16.2	Weather predictability	544
16.3	Climate dynamics and models	547
16.4	Predictability of climate	550
16.5	Concluding remarks	555
16.6	Appendix: Mathematical description of singular vectors	555
16.7	References for 16	556
17	Global climate maps 1991 - 1995 (M. Kottek, M. Hantel)	564
17.1	Introduction	564
17.2	Maps of selected climate elements	566
17.2.1	Surface state quantities	566
17.2.2	Integrated state quantities and horizontal mass fluxes	568
17.2.3	Top of atmosphere flux densities	569
17.2.4	Surface flux densities	570
17.2.5	Integrated energy flux quantities	572
17.2.6	Secondary climate elements	572
17.3	References for 17	708

Observed Global Climate

Hantel, M. (Ed.)

2005, XXI, 575 p. With DVD., Hardcover

ISBN: 978-3-540-20206-6
