<b>1</b>	<b>Introduction</b>	1
1.1	Ideas and References	1
1.2	Content and Reading Approaches	11
<b>2</b>	<b>The Source of Examples</b>	21
2.1	The Boltzmann Equation	21
2.1.1	The Equation	21
2.1.2	The Basic Properties of the Boltzmann Equation	23
2.1.3	Linearized Collision Integral	25
2.2	Phenomenology and Quasi-Chemical Representation of the Boltzmann Equation	26
2.3	Kinetic Models	27
2.4	Methods of Reduced Description	28
2.4.1	The Hilbert Method	29
2.4.2	The Chapman–Enskog Method	30
2.4.3	The Grad Moment Method	32
2.4.4	Special Approximations	33
2.4.5	The Method of Invariant Manifold	33
2.4.6	Quasiequilibrium Approximations	35
2.5	Discrete Velocity Models	36
2.6	Direct Simulation	36
2.7	Lattice Gas and Lattice Boltzmann Models	37
2.7.1	Discrete Velocity Models for Hydrodynamics	37
2.7.2	Entropic Lattice Boltzmann Method	42
2.7.3	Entropic Lattice BGK Method (ELBGK)	42
2.7.4	Boundary Conditions	46
2.7.5	Numerical Illustrations of the ELBGK	46
2.8	Other Kinetic Equations	46
2.8.1	The Enskog Equation for Hard Spheres	46
2.8.2	The Vlasov Equation	48
2.8.3	The Fokker–Planck Equation	49
2.9	Equations of Chemical Kinetics and Their Reduction	50
2.9.1	Dissipative Reaction Kinetics	50

2.9.2	The Problem of Reduced Description in Chemical Kinetics . . . . .	55
2.9.3	Partial Equilibrium Approximations . . . . .	55
2.9.4	Model Equations . . . . .	57
2.9.5	Quasi-Steady State Approximation . . . . .	59
2.9.6	Thermodynamic Criteria for the Selection of Important Reactions . . . . .	61
2.9.7	Opening . . . . .	62
<b>3</b>	<b>Invariance Equation in Differential Form . . . . .</b>	<b>65</b>
<b>4</b>	<b>Film Extension of the Dynamics: Slowness as Stability . . . .</b>	<b>69</b>
4.1	Equation for the Film Motion . . . . .	69
4.2	Stability of Analytical Solutions . . . . .	71
<b>5</b>	<b>Entropy, Quasiequilibrium, and Projectors Field . . . . .</b>	<b>79</b>
5.1	Moment Parameterization . . . . .	79
5.2	Entropy and Quasiequilibrium . . . . .	80
5.3	Thermodynamic Projector without a Priori Parameterization . . . . .	85
5.4	Uniqueness of Thermodynamic Projector . . . . .	87
5.4.1	Projection of Linear Vector Field . . . . .	87
5.4.2	The Uniqueness Theorem . . . . .	88
5.4.3	Orthogonality of the Thermodynamic Projector and Entropic Gradient Models . . . . .	90
5.4.4	Violation of the Transversality Condition, Singularity of Thermodynamic Projection, and Steps of Relaxation . . . . .	92
5.4.5	Thermodynamic Projector, Quasiequilibrium, and Entropy Maximum . . . . .	93
5.5	Example: Quasiequilibrium Projector and Defect of Invariance for the Local Maxwellians Manifold of the Boltzmann Equation . . . . .	97
5.5.1	Difficulties of Classical Methods of the Boltzmann Equation Theory . . . . .	98
5.5.2	Boltzmann Equation . . . . .	99
5.5.3	Local Manifolds . . . . .	100
5.5.4	Thermodynamic Quasiequilibrium Projector . . . . .	101
5.5.5	Defect of Invariance for the LM Manifold . . . . .	102
5.6	Example: Quasiequilibrium Closure Hierarchies for the Boltzmann Equation . . . . .	103
5.6.1	Triangle Entropy Method . . . . .	103
5.6.2	Linear Macroscopic Variables . . . . .	106

5.6.3	Transport Equations for Scattering Rates in the Neighbourhood of Local Equilibrium. Second and Mixed Hydrodynamic Chains.....	113
5.6.4	Distribution Functions of the Second Quasiequilibrium Approximation for Scattering Rates .....	116
5.6.5	Closure of the Second and Mixed Hydrodynamic Chains	123
5.6.6	Appendix: Formulas of the Second Quasiequilibrium Approximation of the Second and Mixed Hydrodynamic Chains for Maxwell Molecules and Hard Spheres .....	126
5.7	Example: Alternative Grad Equations and a “New Determination of Molecular Dimensions” (Revisited) .....	131
5.7.1	Nonlinear Functionals Instead of Moments in the Closure Problem.....	132
5.7.2	Linearization .....	133
5.7.3	Truncating the Chain .....	134
5.7.4	Entropy Maximization .....	134
5.7.5	A New Determination of Molecular Dimensions (Revisited) .....	136
<b>6</b>	<b>Newton Method</b>	
	<b>with Incomplete Linearization .....</b>	<b>139</b>
6.1	The Method .....	139
6.2	Example: Two-Step Catalytic Reaction.....	141
6.3	Example: Non-Perturbative Correction of Local Maxwellian Manifold and Derivation of Nonlinear Hydrodynamics from Boltzmann Equation (1D) .....	144
6.3.1	Positivity and Normalization.....	144
6.3.2	Galilean Invariance of Invariance Equation.....	145
6.3.3	Equation of the First Iteration .....	146
6.3.4	Parametrix Expansion .....	149
6.3.5	Finite-Dimensional Approximations to Integral Equations .....	154
6.3.6	Hydrodynamic Equations.....	159
6.3.7	Nonlocality .....	160
6.3.8	Acoustic Spectra .....	160
6.3.9	Nonlinearity .....	161
6.4	Example: Non-Perturbative Derivation of Linear Hydrodynamics from the Boltzmann Equation (3D) .....	163

6.5	Example: Dynamic Correction to Moment Approximations . . . . .	170
6.5.1	Dynamic Correction or Extension of the List of Variables? . . . . .	170
6.5.2	Invariance Equation for Thirteen-Moment Parameterization . . . . .	171
6.5.3	Solution of the Invariance Equation . . . . .	174
6.5.4	Corrected Thirteen-Moment Equations . . . . .	175
6.5.5	Discussion: Transport Coefficients, Destroying the Hyperbolicity, etc. . . . .	177
<b>7</b>	<b>Quasi-Chemical Representation . . . . .</b>	<b>179</b>
7.1	Decomposition of Motions, Non-Uniqueness of Selection of Fast Motions, Self-Adjoint Linearization, Onsager Filter, and Quasi-Chemical Representation . . . . .	179
7.2	Example: Quasi-Chemical Representation and Self-Adjoint Linearization of the Boltzmann Collision Operator . . . . .	183
<b>8</b>	<b>Hydrodynamics From Grad's Equations: What Can We Learn From Exact Solutions? . . . . .</b>	<b>189</b>
8.1	The "Ultra-Violet Catastrophe" of the Chapman-Enskog Expansion . . . . .	189
8.2	The Chapman-Enskog Method for Linearized Grad's Equations . . . . .	192
8.3	Exact Summation of the Chapman-Enskog Expansion . . . . .	195
8.3.1	The $1D10M$ Grad Equations . . . . .	195
8.3.2	The $3D10M$ Grad Equations . . . . .	202
8.4	The Dynamic Invariance Principle . . . . .	212
8.4.1	Partial Summation of the Chapman-Enskog Expansion . . . . .	212
8.4.2	The Dynamic Invariance . . . . .	215
8.4.3	The Newton Method . . . . .	217
8.4.4	Invariance Equation for the $1D13M$ Grad System . . . .	223
8.4.5	Invariance Equation for the $3D13M$ Grad System . . . .	228
8.4.6	Gradient Expansions in Kinetic Theory of Phonons . . .	230
8.4.7	Nonlinear Grad Equations . . . . .	239
8.5	The Main Lesson . . . . .	246
<b>9</b>	<b>Relaxation Methods . . . . .</b>	<b>247</b>
9.1	"Large Stepping" for the Equation of the Film Motion . . . . .	247
9.2	Example: Relaxation Method for the Fokker-Planck Equation . . . . .	248

9.2.1	Quasi-Equilibrium Approximations for the Fokker-Planck Equation .....	248
9.2.2	The Invariance Equation for the Fokker-Planck Equation .....	251
9.2.3	Diagonal Approximation .....	252
9.3	Example: Relaxational Trajectories: Global Approximations .....	254
9.3.1	Initial Layer and Large Stepping .....	254
9.3.2	Extremal Properties of the Limiting State .....	256
9.3.3	Approximate Trajectories .....	259
9.3.4	Relaxation of the Boltzmann Gas .....	262
9.3.5	Estimations .....	268
9.3.6	Discussion .....	276
<b>10</b>	<b>Method of Invariant Grids .....</b>	<b>279</b>
10.1	Invariant Grids .....	279
10.2	Grid Construction Strategy .....	282
10.2.1	Growing Lump .....	282
10.2.2	Invariant Flag .....	282
10.2.3	Boundaries Check and the Entropy .....	283
10.3	Instability of Fine Grids .....	283
10.4	Which Space is Most Appropriate for the Grid Construction? .....	284
10.5	Carleman's Formula in the Analytical Invariant Manifolds Approximations. First Benefit of Analyticity: Superresolution .....	285
10.6	Example: Two-Step Catalytic Reaction .....	287
10.7	Example: Model Hydrogen Burning Reaction .....	291
10.8	Invariant Grid as a Tool for Data Visualization .....	295
<b>11</b>	<b>Method of Natural Projector .....</b>	<b>299</b>
11.1	Ehrenfests' Coarse-Graining Extended to a Formalism of Nonequilibrium Thermodynamics .....	299
11.2	Example: From Reversible Dynamics to Navier-Stokes and Post-Navier-Stokes Hydrodynamics by Natural Projector .....	301
11.2.1	General Construction .....	303
11.2.2	Enhancement of Quasiequilibrium Approximations for Entropy-Conserving Dynamics .....	304
11.2.3	Entropy Production .....	307
11.2.4	Relation to the Work of Lewis .....	308
11.2.5	Equations of Hydrodynamics .....	310
11.2.6	Derivation of the Navier-Stokes Equations .....	310
11.2.7	Post-Navier-Stokes Equations .....	313

11.3	Example: Natural Projector for the Mc Kean Model	316
11.3.1	General Scheme	316
11.3.2	Natural Projector for Linear Systems	318
11.3.3	Explicit Example of the Fluctuation–Dissipation Formula	319
11.3.4	Comparison with the Chapman–Enskog Method and Solution of the Invariance Equation	321
<b>12</b>	<b>Geometry of Irreversibility:</b>	
	<b>The Film of Nonequilibrium States</b>	325
12.1	The Thesis About Macroscopically Definable Ensembles and the Hypothesis About Primitive Macroscopically Definable Ensembles	325
12.2	The Problem of Irreversibility	328
12.2.1	The Phenomenon of the Macroscopic Irreversibility	328
12.2.2	Phase Volume and Dynamics of Ensembles	329
12.2.3	Macroscopically Definable Ensembles and Quasiequilibria	331
12.2.4	Irreversibility and Initial Conditions	334
12.2.5	Weak and Strong Tendency to Equilibrium, Shaking and Short Memory	335
12.2.6	Subjective Time and Irreversibility	336
12.3	Geometrization of Irreversibility	336
12.3.1	Quasiequilibrium Manifold	336
12.3.2	Quasiequilibrium Approximation	339
12.4	Natural Projector and Models of Nonequilibrium Dynamics	341
12.4.1	Natural Projector	341
12.4.2	One-Dimensional Model of Nonequilibrium States	343
12.4.3	Curvature and Entropy Production: Entropic Circle and First Kinetic Equations	346
12.5	The Film of Non-Equilibrium States	348
12.5.1	Equations for the Film	348
12.5.2	Thermodynamic Projector on the Film	349
12.5.3	Fixed Points of the Film Equation	352
12.5.4	The Failure of the Simplest Galerkin-Type Approximations for Conservative Systems	353
12.5.5	Second Order Kepler Models of the Film	355
12.5.6	The Finite Models: Termination at the Horizon Points	356
12.5.7	The Transversal Restart Lemma	359
12.5.8	The Time Replacement, and the Invariance of the Projector	360
12.5.9	Correction to the Infinite Models	360

12.5.10	The Film, and the Macroscopic Equations . . . . .	361
12.5.11	New in the Separation of the Relaxation Times . . . .	363
12.6	The Main Results . . . . .	364
<b>13</b>	<b>Slow Invariant Manifolds for Open Systems . . . . .</b>	<b>367</b>
13.1	Slow Invariant Manifold for a Closed System Has Been Found. What Next? . . . . .	367
13.2	Slow Dynamics in Open Systems. Zero-Order Approximation and the Thermodynamic Projector . . . . .	368
13.3	Slow Dynamics in Open Systems. First-Order Approximation . . . . .	371
13.4	Beyond the First-Order Approximation: Higher-Order Dynamic Corrections, Stability Loss and Invariant Manifold Explosion . . . . .	373
13.5	Example: The Universal Limit in Dynamics of Dilute Polymeric Solutions . . . . .	375
13.5.1	The Problem of Reduced Description in Polymer Dynamics . . . . .	377
13.5.2	The Method of Invariant Manifold for Weakly Driven Systems . . . . .	382
13.5.3	Linear Zero-Order Equations . . . . .	387
13.5.4	Auxiliary Formulas. 1. Approximations to Eigenfunctions of the Fokker–Planck Operator . . . . .	388
13.5.5	Auxiliary Formulas. 2. Integral Relations . . . . .	390
13.5.6	Microscopic Derivation of Constitutive Equations . . . . .	391
13.5.7	Tests on the FENE Dumbbell Model . . . . .	397
13.5.8	The Main Results of this Example are as Follows: . . . . .	401
13.6	Example: Explosion of Invariant Manifold, Limits of Macroscopic Description for Polymer Molecules, Molecular Individualism, and Multimodal Distributions . . . . .	403
13.6.1	Dumbbell Models and the Problem of the Classical Gaussian Solution Stability . . . . .	403
13.6.2	Dynamics of the Moments and Explosion of the Gaussian Manifold . . . . .	405
13.6.3	Two-Peak Approximation for Polymer Stretching in Flow and Explosion of the Gaussian Manifold . . . . .	407
13.6.4	Polymodal Polyhedron and Molecular Individualism . . . . .	411
<b>14</b>	<b>Dimension of Attractors Estimation . . . . .</b>	<b>419</b>
14.1	Lyapunov Norms, Finite-Dimensional Asymptotics and Volume Contraction . . . . .	419
14.2	Examples: Lyapunov Norms for Reaction Kinetics . . . . .	423

## XVIII Contents

14.3	Examples: Infinite-Dimensional Systems With Finite-Dimensional Attractors . . . . .	426
14.4	Systems with Inheritance: Dynamics of Distributions with Conservation of Support, Natural Selection and Finite-Dimensional Asymptotics . . . . .	432
14.4.1	Introduction: Unusual Conservation Law . . . . .	432
14.4.2	Optimality Principle for Limit Diversity . . . . .	436
14.4.3	How Many Points Does the Limit Distribution Support Hold? . . . . .	438
14.4.4	Selection Efficiency . . . . .	440
14.4.5	Gromov's Interpretation of Selection Theorems . . . . .	444
14.4.6	Drift Equations . . . . .	445
14.4.7	Three Main Types of Stability . . . . .	449
14.4.8	Main Results About Systems with Inheritance . . . . .	450
14.5	Example: Cell Division Self-Synchronization . . . . .	451
15	<b>Accuracy Estimation and Post-Processing in Invariant Manifolds Construction . . . . .</b>	<b>457</b>
15.1	Formulas for Dynamic and Static Post-Processing . . . . .	457
15.2	Example: Defect of Invariance Estimation and Switching from the Microscopic Simulations to Macroscopic Equations . . . . .	460
15.2.1	Invariance Principle and Micro-Macro Computations . . . . .	460
15.2.2	Application to Dynamics of Dilute Polymer Solution . . . . .	461
16	<b>Conclusion . . . . .</b>	<b>467</b>
	<b>References . . . . .</b>	<b>469</b>
	<b>Mathematical Notation and Some Terminology . . . . .</b>	<b>491</b>
	<b>Index . . . . .</b>	<b>493</b>

Invariant Manifolds for Physical and Chemical Kinetics

Gorban, A.N.; Karlin, I.V.

2005, XVIII, 496 p., Hardcover

ISBN: 978-3-540-22684-0
