

Table of Contents

Introduction	1
1 Stochastic Differential Equations	5
1.1 General Definitions	5
1.2 Sufficient Conditions for Existence and Uniqueness	9
1.3 Ten Important Examples	12
1.4 Martingale Problems	19
1.5 Solutions up to a Random Time	23
2 One-Sided Classification of Isolated Singular Points	27
2.1 Isolated Singular Points: The Definition	27
2.2 Isolated Singular Points: Examples	32
2.3 One-Sided Classification: The Results	34
2.4 One-Sided Classification: Informal Description	38
2.5 One-Sided Classification: The Proofs	42
3 Two-Sided Classification of Isolated Singular Points	65
3.1 Two-Sided Classification: The Results	65
3.2 Two-Sided Classification: Informal Description	66
3.3 Two-Sided Classification: The Proofs	69
3.4 The Branch Points: Non-Markov Solutions	73
3.5 The Branch Points: Strong Markov Solutions	75
4 Classification at Infinity and Global Solutions	81
4.1 Classification at Infinity: The Results	81
4.2 Classification at Infinity: Informal Description	82
4.3 Classification at Infinity: The Proofs	85
4.4 Global Solutions: The Results	86
4.5 Global Solutions: The Proofs	88
5 Several Special Cases	93
5.1 Power Equations: Types of Zero	93
5.2 Power Equations: Types of Infinity	97
5.3 Equations with a Constant-Sign Drift: Types of Zero	99
5.4 Equations with a Constant-Sign Drift: Types of Infinity	102

Appendix A: Some Known Facts	105
A.1 Local Times	105
A.2 Random Time-Changes	107
A.3 Bessel Processes	108
A.4 Strong Markov Families	110
A.5 Other Facts	111
Appendix B: Some Auxiliary Lemmas	113
B.1 Stopping Times	113
B.2 Measures and Solutions	114
B.3 Other Lemmas	116
References	119
Index of Notation	123
Index of Terms	127
