## Contents

<b>Preface</b> .....	V
<b>Contents</b> .....	VII
<b>Nomenclature</b> .....	XI
<b>1 Introduction</b> .....	1
1.1 Systems and scales .....	1
1.2 Numerical process simulation .....	6
1.3 Model concepts and modeling systems.....	8
1.3.1 Model concepts .....	8
1.3.2 Modeling systems .....	11
1.3.3 Need for laboratory and field experiments .....	13
1.4 Deficits and objectives of the work.....	15
1.4.1 Deficits .....	15
1.4.2 Objectives of the work .....	16
<b>2 Physical and mathematical model concepts</b> .....	19
2.1 Physical model concepts .....	19
2.1.1 Continuum-mechanical consideration.....	19
2.1.2 Subsurface systems .....	20
2.1.3 Surface-water systems.....	24
2.2 General form of the balance equation .....	27
2.3 Mathematical model concept for groundwater flow and transport processes .....	29
2.3.1 Flow processes .....	29
2.3.2 Transport processes.....	32
2.4 Mathematical model concept for two-phase flow processes in the subsurface .....	37
2.4.1 Continuity equation .....	37
2.4.2 Momentum equation .....	38

2.4.3	Constitutive relations . . . . .	39
2.4.4	Two-phase flow equations . . . . .	42
2.5	Mathematical model concept for two-phase / multicomponent flow and transport processes in the subsurface . . . . .	44
2.5.1	Continuity and momentum equation . . . . .	45
2.5.2	Constitutive relationships . . . . .	45
2.5.3	Two-phase / three-component flow and transport equations . . . . .	46
2.6	Mathematical model concept for flow and transport processes in surface water . . . . .	48
2.6.1	Flow processes . . . . .	48
2.6.2	Transport processes . . . . .	53
<b>3</b>	<b>Efficient numerical methods . . . . .</b>	<b>55</b>
3.1	Discretization and stabilization methods . . . . .	55
3.1.1	General requirements . . . . .	55
3.1.2	Time discretization . . . . .	58
3.1.3	Finite-Difference Methods . . . . .	62
3.1.4	Finite-Element Methods . . . . .	72
3.1.5	Finite-Volume Methods . . . . .	84
3.1.6	Some other methods . . . . .	94
3.2	Parallel methods . . . . .	97
3.2.1	Development of High-Performance Computing . . . . .	98
3.2.2	Parallelization strategies . . . . .	98
3.2.3	Parallelization of basic tasks . . . . .	100
3.2.4	Load balancing . . . . .	107
3.2.5	Particle Methods and series . . . . .	112
3.2.6	Recommendations . . . . .	114
3.2.7	Examples . . . . .	114
3.3	Adaptive methods . . . . .	118
3.3.1	Different methods and techniques of adaptation . . . . .	118
3.3.2	Error estimators and indicators . . . . .	123
3.3.3	Refinement and coarsening . . . . .	130
3.3.4	Examples . . . . .	135
3.4	Fast solvers . . . . .	139
3.4.1	Introduction . . . . .	139
3.4.2	Single-grid solvers . . . . .	140
3.4.3	Preconditioners . . . . .	147
3.4.4	Multigrid solvers . . . . .	151
3.4.5	Non-linear solvers . . . . .	160
3.4.6	Examples . . . . .	162

<b>4</b>	<b>Efficient information-processing techniques</b>	167
4.1	Preprocessing	167
4.1.1	Introduction	167
4.1.2	CAD systems	170
4.1.3	Database-management systems	172
4.1.4	Tomography and scanning	173
4.1.5	Geographical Information Systems	175
4.1.6	Geostatistical methods	178
4.1.7	Mesh generation	180
4.2	Processing	184
4.2.1	High-Performance Computational Architectures	184
4.2.2	Networks and communication in HPC	187
4.2.3	Performance numbers	189
4.2.4	MUFTE-UG	191
4.3	Postprocessing	196
4.4	WWW-based Collaborative Engineering	199
4.4.1	Introduction	199
4.4.2	Software tools and hardware requirements	200
4.4.3	HydroWeb	202
<b>5</b>	<b>Applications</b>	205
5.1	Groundwater flow and transport processes	205
5.1.1	Motivation of the equidimensional modeling approach for fracture-matrix systems	206
5.1.2	The numerical algorithm	208
5.1.3	Extension of the mesh generator ART	208
5.1.4	Comparison of the low- and equidimensional modeling approaches	209
5.1.5	Comparison of upwind methods	212
5.1.6	Adaptive methods	212
5.1.7	Evaluation and future work	217
5.2	Two-phase flow processes in the subsurface	218
5.2.1	Numerical algorithm	218
5.2.2	Example: Methane migration processes in coal mining areas	219
5.2.3	Example: Gas-water flow processes in dike systems	232
5.2.4	Example: Multi-step outflow experiment	236
5.3	Two-phase / multicomponent processes in the subsurface	238
5.3.1	Numerical algorithm	238
5.3.2	Example: Two-phase / multicomponent flow and transport processes in the interaction area groundwater - surface water	238
5.4	Flow and transport processes in surface water	248
5.4.1	Vertically-integrated flow and transport processes in shallow water	248

X      Contents

5.4.2 Three-dimensional flow and transport processes in shallow water .....	263
<b>6 Summary and conclusions .....</b>	<b>277</b>
<b>References .....</b>	<b>283</b>
<b>Index .....</b>	<b>301</b>

Efficient Numerical Methods and Information-Processing  
Techniques for Modeling Hydro- and Environmental  
Systems

Hinkelmann, R.

2005, XVIII, 306 p. 9 illus. in color., Hardcover

ISBN: 978-3-540-24146-1
