

# Contents

<b>1</b>	<b>Introduction</b> .....	1
	1.1 Notation .....	8
	References .....	9
<b>2</b>	<b>Feynman Integrals:</b>	
	<b>Basic Definitions and Tools</b> .....	11
	2.1 Feynman Rules and Feynman Integrals .....	11
	2.2 Divergences .....	14
	2.3 Alpha Representation .....	18
	2.4 Regularization .....	20
	2.5 Properties of Dimensionally Regularized Feynman Integrals .....	24
	References .....	29
<b>3</b>	<b>Evaluating by Alpha and Feynman Parameters</b> .....	31
	3.1 Simple One- and Two-Loop Formulae .....	31
	3.2 Auxiliary Tricks .....	34
	3.2.1 Recursively One-Loop Feynman Integrals .....	34
	3.2.2 Partial Fractions .....	35
	3.2.3 Dealing with Numerators .....	36
	3.3 One-Loop Examples .....	38
	3.4 Feynman Parameters .....	41
	3.5 Two-Loop Examples .....	43
	References .....	52
<b>4</b>	<b>Evaluating by MB Representation</b> .....	55
	4.1 One-Loop Examples .....	56
	4.2 Multiple MB Integrals .....	63
	4.3 More One-Loop Examples .....	65
	4.4 Two-Loop Massless Examples .....	71
	4.5 Two-Loop Massive Examples .....	81
	4.6 Three-Loop Examples .....	92
	4.7 More Loops .....	98
	4.8 MB Representation versus Expansion by Regions .....	102

## VIII Contents

4.9	Conclusion	105
	References	106
<b>5</b>	<b>IBP and Reduction to Master Integrals</b>	109
5.1	One-Loop Examples	109
5.2	Two-Loop Examples	114
5.3	Reduction of On-Shell Massless Double Boxes	120
5.4	Conclusion	127
	References	130
<b>6</b>	<b>Reduction to Master Integrals by Baikov's Method</b>	133
6.1	Basic Parametric Representation	133
6.2	Constructing Coefficient Functions. Simple Examples	138
6.3	General Recipes. Complicated Examples	146
6.4	Two-Loop Feynman Integrals for the Heavy Quark Potential	152
6.5	Conclusion	162
	References	163
<b>7</b>	<b>Evaluation by Differential Equations</b>	165
7.1	One-Loop Examples	165
7.2	Two-Loop Example	170
7.3	Conclusion	173
	References	176
<b>A</b>	<b>Tables</b>	179
A.1	Table of Integrals	179
A.2	Some Useful Formulae	185
<b>B</b>	<b>Some Special Functions</b>	187
	References	189
<b>C</b>	<b>Summation Formulae</b>	191
C.1	Some Number Series	192
C.2	Power Series of Levels 3 and 4 in Terms of Polylogarithms	197
C.3	Inverse Binomial Power Series up to Level 4	198
C.4	Power Series of Levels 5 and 6 in Terms of HPL	200
	References	204
<b>D</b>	<b>Table of MB Integrals</b>	207
D.1	MB Integrals with Four Gamma Functions	207
D.2	MB Integrals with Six Gamma Functions	214

<b>E</b>	<b>Analysis of Convergence and Sector Decompositions</b>	221
E.1	Analysis of Convergence	221
E.2	Practical Sector Decompositions	229
	References	232
<b>F</b>	<b>A Brief Review of Some Other Methods</b>	233
F.1	Dispersion Integrals	233
F.2	Gegenbauer Polynomial $x$ -Space Technique	234
F.3	Gluing	235
F.4	Star-Triangle Relations	236
F.5	IR Rearrangement and $R^*$	237
F.6	Difference Equations	240
F.7	Experimental Mathematics and PSLQ	241
	References	243
	<b>List of Symbols</b>	245
	<b>Index</b>	247

Evaluating Feynman Integrals

Smirnov, V.A.

2005, X, 250 p., Hardcover

ISBN: 978-3-540-23933-8
