Foreword	vii
A Saturated and Conditional Structures in Banach Spaces	
<i>Spiros A. Argyros</i>	1
Introduction	3
I. Tsirelson and Mixed Tsirelson Spaces	7
II. Tree Complete Extensions of a Ground Norm	21
II.1 Mixed Tsirelson Extension of a Ground Norm	21
II.2 R.I.S. Sequences and the Basic Inequality	26
III. Hereditarily Indecomposable Extensions with a Schauder Basis	39
III.1 The HI Property in $\mathfrak{X}[G, \sigma]$	39
III.2 The HI Property in $\mathfrak{X}[G, \sigma]_*$	43
IV. The Space of the Operators for HI Banach Spaces	47
IV.1 Some General Properties of HI Spaces	47
IV.2 The Space of Operators $\mathcal{L}(\mathfrak{X}[G, \sigma]), \mathcal{L}(\mathfrak{X}[G, \sigma]_*)$	52
V. Examples of Hereditarily Indecomposable Extensions	57
V.1 A Quasi-reflexive HI Space	57
V.2 The Spaces ℓ_p , $1 < p < \infty$, are Quotients of HI Spaces	58
V.3 A Non Separable HI Space	62
VI. The Space \mathfrak{X}_{ω_1}	71
VII. Finite Representability of J_{T_0} and the Diagonal Space $\mathcal{D}(\mathfrak{X}_\gamma)$	81
VIII. The Spaces of Operators $\mathcal{L}(\mathfrak{X}_\gamma), \mathcal{L}(X, \mathfrak{X}_{\omega_1})$	87
Appendix A. Transfinite Schauder Basic Sequences	99
Appendix B. The Proof of the Finite Representability of J_{T_0}	105
Bibliography	117

B High-Dimensional Ramsey Theory and Banach Space Geometry	121
<i>Stevo Todorćević</i>	
Introduction	123
I. Finite-Dimensional Ramsey Theory	127
I.1 Finite-Dimensional Ramsey Theorem	127
I.2 Spreading Models of Banach Spaces	130
I.3 Finite Representability of Banach Spaces	135
II. Ramsey Theory of Finite and Infinite Sequences	143
II.1 The Theory of Well-Quasi-Ordered Sets	143
II.2 Nash–Williams’ Theory of Fronts and Barriers	147
II.3 Uniform Fronts and Barriers	153
II.4 Canonical Equivalence Relations on Uniform Fronts and Barriers .	165
II.5 Unconditional Subsequences of Weakly Null Sequences	169
II.6 Topological Ramsey Theory	177
II.7 The Theory of Better-Quasi-Orderings	180
II.8 Ellentuck’s Theorem	185
II.9 Summability in Banach Spaces	188
II.10 Summability in Topological Abelian Groups	192
III. Ramsey Theory of Finite and Infinite Block Sequences	197
III.1 Hindman’s Theorem	197
III.2 Canonical Equivalence Relations on FIN	200
III.3 Fronts and Barriers on $\text{FIN}^{<\omega}$	201
III.4 Milliken’s Theorem	205
III.5 An Approximate Ramsey Theorem	209
IV. Approximate and Strategic Ramsey Theory of Banach Spaces	217
IV.1 Gowers’ Dichotomy	217
IV.2 Approximate and Strategic Ramsey Sets	220
IV.3 Combinatorial Forcing on Block Sequences in Banach Spaces . . .	224
IV.4 Coding into Approximate and Strategic Ramsey Sets	229
IV.5 Topological Ramsey Theory of Block Sequences in Banach Spaces .	233
IV.6 An Application to Rough Classification of Banach Spaces	240
IV.7 An Analytic Set whose Complement is not Approximately Ramsey	243
Bibliography	247
Index	253

Ramsey Methods in Analysis

Argyros, S.A.; Todorcevic, S.

2005, VI, 257 p., Softcover

ISBN: 978-3-7643-7264-4

A product of Birkhäuser Basel
