Preface	v
Contributors	xiii
1 Introduction	1
2 Light-Induced Dynamic Gratings and Photorefraction	7
2.1 Introduction	7
2.2 Two-Beam Interference and Interference Gratings	8
2.3 Material Response: Amplitude and Phase Gratings	19
2.4 Grating Detection by Diffraction and Wave-Mixing	31
2.5 Conclusions	40
3 Fundamentals of Photorefractive Phenomena	43
3.1 The Photorefractive Nonlinearity: Introductory Remarks	43
3.2 Physical Mechanisms: Standard Microscopic Model	46
3.3 Theoretical Modeling: Rate Equations	47
3.4 Photovoltaic Drift	48
3.5 Macroscopic Formulation	50
3.6 Low Intensities: Continuous Wave (CW) Regime	50
3.7 Quasi-Equilibrium (Adiabatic) Approximation	51
3.8 Perturbative Approach to the Nonlinear Equation	52
3.9 Sinusoidal Light Excitation at Low Modulation Linear Equation for the Field	52
3.10 Summary of Characteristic Times, Lengths and Fields	56
3.11 Grating Enhancement Methods	57

viii Contents

3.12	High-Contrast Effects	60
3.13	Space-Charge Waves	64
3.14	Complicating Features to the Standard Model	65
3.15	Localized Optical Beams	67
3.16	Transient and Quasi-Steady-State Effects	74
3.17	Conclusions	77
4	Space-Charge Driven Holograms in Anisotropic Media	83
4.1	Introduction	83
4.2	Basic Considerations	83
4.3	Light Diffraction at Thick Anisotropic Phase and Absorption Gratings	91
4.4	Two-Wave Mixing in Anisotropic Dichroic Media	102
4.5	Examples	110
4.6	Conclusions	116
5	Space-Charge Wave Effects in Photorefractive Materials	119
5.1	Overview	119
5.2	Space-Charge Wave Characteristics	123
5.3	Linear Excitation of Space-Charge Waves	131
5.4	Parametric Excitation of SCWs: Subharmonic Generation	134
5.5	High-Contrast Effects in Photorefractive Response	145
5.6	Joint Action of Material and Optical Nonlinearities	152
5.7	Conclusions	158
6	Feedback-Controlled Photorefractive Beam Coupling	163
6.1	Introduction	163
6.2	Operation Principle of the Feedback Setup	168

6.3	Basic Relations for Feedback-Controlled Beam Coupling . .	172
6.4	Periodic States	180
6.5	Feedback Operation in Reflection Geometry	194
6.6	Summary	198
7	Band-to-Band Photorefraction	203
7.1	Introduction	203
7.2	Interband Photorefraction with cw Recording Waves	204
7.3	Materials	212
7.4	Applications	221
7.5	Conclusions	226
8	Two-Step Recording in Photorefractive Crystals	231
8.1	Introduction	231
8.2	Early Experiments	232
8.3	Shallow Levels, Two-Level Models	234
8.4	Two-Step Excitations via Shallow Levels	237
8.5	Hologram Recording Utilizing Pyroelectric Fields	241
8.6	Lifetime of the Holograms	244
8.7	Advantages of Infrared Recording	247
8.8	Conclusions	248
9	Spatio-Temporal Instabilities and Self-Organization	253
9.1	Pattern Formation in Nonlinear Optics	254
9.2	Overview of Pattern Formation in Photorefractive Media . .	257
9.3	Spotlight: KNbO_3 : Fe Single Feedback System	265
9.4	Controlling Pattern Formation	278

x Contents

9.5	Summary and Outlook	282
10	Photorefractive Waveguides	289
10.1	Introduction	289
10.2	Fundamentals of Photorefractive Waveguides	289
10.3	Materials with Illmenite Structure	294
10.4	Materials with Perovscite Structure	302
10.5	Materials with Tungsten-Bronze Structure	305
10.6	Sillenites	307
10.7	Applications	307
10.8	Conclusions and Outlook	310
11	Photorefractive Solitons	317
11.1	Introduction	317
11.2	The Discovery of Solitons in Photorefractives	318
11.3	A Saturable Nonlinearity	322
11.4	Two-Dimensional Solitons	329
11.5	Temporal Effects and Quasi-Steady-State Dynamics	334
11.6	Various Photorefractive Mechanisms Supporting Self-Trapping	336
11.7	Alternative Photorefractive Materials	342
11.8	Soliton Interaction-Collisions	343
11.9	Vector and Composite Solitons	348
11.10	Incoherent Solitons: Self-trapping of Weakly-Correlated Wavepackets	351
11.11	Applications	353

11.12	New Ideas and Concluding Remarks	357
11.13	Acknowledgements	358
12	Thermal Fixing of Photoinduced Gratings	369
12.1	Introduction	369
12.2	The Thermal Fixing Technique	370
12.3	Mathematical Formulation of the Model	372
12.4	Experimental Aspects of Thermal Fixing	380
12.5	Fixing in Photorefractive Waveguides	388
12.6	Photorefractive Applications Using Thermal Fixing	391
12.7	Summary	393
13	Electrical Fixing of Photoinduced Gratings	397
13.1	Introduction	397
13.2	Electrical Properties	398
13.3	Domain Fixing Mechanisms	402
13.4	Fidelity of Fixed Holograms	413
	Index	417

Photorefractive Materials and Their Applications 1

Basic Effects

Günter, P.; Huignard, J.P. (Eds.)

2006, XIV, 426 p. 169 illus., Hardcover

ISBN: 978-0-387-25191-2
