Preface	v
Introduction	1
1 Vector and tensor fields	7
1.0 Introduction	7
1.1 Coordinate systems in Euclidean space	7
1.2 Suffix notation	13
1.3 Tangents and gradients	19
1.4 Coordinate transformations in Euclidean space	23
1.5 Tensor fields in Euclidean space	27
1.6 Surfaces in Euclidean space	30
1.7 Manifolds	35
1.8 Tensor fields on manifolds	38
1.9 Metric properties	43
1.10 What and where are the bases?	46
Problems 1	49
2 The spacetime of general relativity and paths of particles ..	53
2.0 Introduction	53
2.1 Geodesics	56
2.2 Parallel vectors along a curve	64
2.3 Absolute and covariant differentiation	71
2.4 Geodesic coordinates	79
2.5 The spacetime of general relativity	82
2.6 Newton's laws of motion	86
2.7 Gravitational potential and the geodesic	87
2.8 Newton's law of universal gravitation	89
2.9 A rotating reference system	90
Problems 2	94

3	Field equations and curvature	97
3.0	Introduction	97
3.1	The stress tensor and fluid motion	97
3.2	The curvature tensor and related tensors	102
3.3	Curvature and parallel transport	105
3.4	Geodesic deviation	110
3.5	Einstein's field equations	112
3.6	Einstein's equation compared with Poisson's equation	115
3.7	The Schwarzschild solution	116
	Problems 3	119
4	Physics in the vicinity of a massive object	123
4.0	Introduction	123
4.1	Length and time	124
4.2	Radar sounding	129
4.3	Spectral shift	131
4.4	General particle motion (including photons)	136
4.5	Perihelion advance	144
4.6	Bending of light	146
4.7	Geodesic effect	149
4.8	Black holes	152
4.9	Other coordinate systems	157
4.10	Rotating objects; the Kerr solution	158
	Problems 4	167
5	Gravitational radiation	169
5.0	Introduction	169
5.1	What wiggles?	170
5.2	Two polarizations	173
5.3	Simple generation and detection	178
	Problems 5	182
6	Elements of cosmology	183
6.0	Introduction	183
6.1	Robertson–Walker line element	185
6.2	Field equations	187
6.3	The Friedmann models	189
6.4	Redshift, distance, and speed of recession	192
6.5	Objects with large redshifts	196
6.6	Comment on Einstein's models; inflation	200
6.7	Newtonian dust	203
	Problems 6	206

Appendices

A	Special relativity review	211
A.0	Introduction	211
A.1	Lorentz transformations	214
A.2	Relativistic addition of velocities	216
A.3	Simultaneity	217
A.4	Time dilation, length contraction	218
A.5	Spacetime diagrams	219
A.6	Some standard 4-vectors	222
A.7	Doppler effect	226
A.8	Electromagnetism	228
	Problems A	231
B	The Chinese connection	233
B.0	Background	233
B.1	Lanchester's transporter on a plane	234
B.2	Lanchester's transporter on a surface	237
B.3	A trip at constant latitude	240
C	Tensors and Manifolds	241
C.0	Introduction	241
C.1	Vector spaces	241
C.2	Dual spaces	244
C.3	Tensor products	247
C.4	The space T_s^r	250
C.5	From tensors to tensor fields	251
C.6	Manifolds	251
C.7	The tangent space at each point of a manifold	254
C.8	Tensor fields on a manifold	256
	Solutions	259
	References	283
	Index	287

A Short Course in General Relativity

Foster, J.; Nightingale, J.D.

2006, X, 292 p. 51 illus., Softcover

ISBN: 978-0-387-26078-5
