Preface	vii
List of Figures	xv
List of Tables	xxi
1. Expressions for Evaluating the Kinetic Parameters	1
Introduction	1
Simple Thermoluminescence Model	1
Expressions for First-, Second-, and General-Order TL Kinetics	2
Methods of Analysis	8
Initial Rise Methods	8
Methods of Analysis Employing the Whole TL Glow Curve	12
Peak Position Methods of Analysis	13
Methods of Analysis Based on the Temperature at the Maximum	13
Methods of Analysis Based on Various Heating Rates	13
Isothermal Decay Method	15
Methods of Analysis Based on the Shape of the Glow Curve	17
Curve Fitting Methods	19
The Series Approximation to the TL Integrals	19
Computerized Curve Fitting Procedures	20
References	21
2. Analysis of Thermoluminescence Data	23
Introduction	23
Exercise 2.1: Analysis of a First-Order TL Peak	24
Exercise 2.2: Heating Rate Method for First-Order Kinetics	35
Exercise 2.3: Isothermal Method for First-Order Kinetics	39
Exercise 2.4: Analysis of a Second-Order TL Peak	42
Exercise 2.5: Isothermal Method for Second-Order Kinetics	53
Exercise 2.6: Analysis of a General-Order TL Peak	58
Exercise 2.7: Influence of the Background on the Results of the Initial Rise Method	70

Exercise 2.8: Study of the 15% Rule of Thumb for the Initial Rise Technique	72
Exercise 2.9: Error Analysis for Peak Shape Methods	74
References	78
3. Simple TL Models	79
Introduction	79
Exercise 3.1: Numerical Integration of First-Order Equation	80
Exercise 3.2: The One-Trap-One-Recombination Center Model	82
Exercise 3.3: Calculation of Glow Peaks Using <i>Mathematica</i>	86
Exercise 3.4: The OTOR Model in <i>Mathematica</i>	91
Exercise 3.5: The IMTS Model in <i>Mathematica</i>	96
Exercise 3.6: Analytical Expressions for First-Order Kinetics	99
Exercise 3.7: Analytical Expressions for Second-Order Kinetics	102
Exercise 3.8: Analytical Expressions for General-Order Kinetics	104
Exercise 3.9: Comparative Study of the Accuracy of Analytical Expressions for First-Order TL Glow Peaks	104
Exercise 3.10: Comparative Study of the Accuracy of Analytical Expressions for General-Order TL Glow Peaks	108
Exercise 3.11: Numerical Study of Mixed-Order Kinetics	111
References	118
4. TL Dose Response Models	120
Introduction	120
Overview of Nonlinear Dose Response of TL Materials and Terminology	121
Exercise 4.1: The Filling of Traps in Crystals During Irradiation	122
Listing of Program for Exercise 4.1	126
Exercise 4.2: Competition During Excitation Model	128
Listing of Program for Exercise 4.2	131
Exercise 4.3: Superlinearity Model with Competition During Both Excitation and Heating	132
Listing of Program for Exercise 4.3	136
Exercise 4.4: The $f(D)$ and $g(D)$ Functions	138
References	143
5. Miscellaneous Applications of Thermoluminescence	144
Introduction	144
Reproducibility of TLD Systems	144
Definitions for Reference and Field Dosimeters	146
Exercise 5.1: Lower Detection Limit, D_{LDL}	148
Exercise 5.2: Reproducibility Measurements	149
Exercise 5.3: Individual Correction Factors, S_i	151

Exercise 5.4: Relative Standard Deviation Versus Dose	152
Exercise 5.5: Dose Monitoring in a Nuclear Medicine Department	153
Exercise 5.6: Determination of the Self-Dose in a TL Material	155
Exercise 5.7: Simulation of Thermal Quenching in TL Materials . . .	156
Exercise 5.8: The Effect of Thermal Quenching on the Initial Rise Method of Analysis	162
Exercise 5.9: TL-Like Presentation of Phosphorescence Decay Curves	166
Exercise 5.10: Temperature Lag Corrections	171
Exercise 5.11: Study of the Integrals Appearing in the Expressions for First- and General-Order TL Kinetics	174
References	180
Annotated Bibliography	182
Appendix: A Brief Introduction to <i>Mathematica</i>	200
Author Index	205
Subject Index	207

Numerical and Practical Exercises in
Thermoluminescence

Pagonis, V.; Kitis, G.; Furetta, C.

2006, XXII, 210 p. 110 illus., Hardcover

ISBN: 978-0-387-26063-1
