

Contents

Preface	vii
1 Background	1
1.1 Euclidean Spaces	1
1.2 Symmetric Matrices	9
2 Inequality Constraints	15
2.1 Optimality Conditions	15
2.2 Theorems of the Alternative	23
2.3 Max-functions	28
3 Fenchel Duality	33
3.1 Subgradients and Convex Functions	33
3.2 The Value Function	43
3.3 The Fenchel Conjugate	49
4 Convex Analysis	65
4.1 Continuity of Convex Functions	65
4.2 Fenchel Biconjugation	76
4.3 Lagrangian Duality	88
5 Special Cases	97
5.1 Polyhedral Convex Sets and Functions	97
5.2 Functions of Eigenvalues	104
5.3 Duality for Linear and Semidefinite Programming	109
5.4 Convex Process Duality	114
6 Nonsmooth Optimization	123
6.1 Generalized Derivatives	123
6.2 Regularity and Strict Differentiability	130
6.3 Tangent Cones	137
6.4 The Limiting Subdifferential	145

7	Karush–Kuhn–Tucker Theory	153
7.1	An Introduction to Metric Regularity	153
7.2	The Karush–Kuhn–Tucker Theorem	160
7.3	Metric Regularity and the Limiting Subdifferential	166
7.4	Second Order Conditions	172
8	Fixed Points	179
8.1	The Brouwer Fixed Point Theorem	179
8.2	Selection and the Kakutani–Fan Fixed Point Theorem	190
8.3	Variational Inequalities	200
9	More Nonsmooth Structure	213
9.1	Rademacher’s Theorem	213
9.2	Proximal Normals and Chebyshev Sets	218
9.3	Amenable Sets and Prox-Regularity	228
9.4	Partly Smooth Sets	233
10	Postscript: Infinite Versus Finite Dimensions	239
10.1	Introduction	239
10.2	Finite Dimensionality	241
10.3	Counterexamples and Exercises	244
10.4	Notes on Previous Chapters	248
11	List of Results and Notation	253
11.1	Named Results	253
11.2	Notation	267
	Bibliography	275
	Index	289

Convex Analysis and Nonlinear Optimization

Theory and Examples

Borwein, J.; Lewis, A.S.

2006, XII, 310 p., Hardcover

ISBN: 978-0-387-29570-1
