Preface	VII
1 An Overview of Evolutionary Computation	1
1.1 Examples of Evolutionary Computation	3
1.1.1 Predators Running Backward	3
1.1.2 Wood-Burning Stoves	5
1.1.3 Hyperspectral Data	9
1.1.4 A Little Biology	11
Problems	15
1.2 Evolutionary Computation in Detail	17
1.2.1 Representation	19
1.2.2 Evolution and Coevolution	21
1.2.3 A Simple Type of Evolutionary Computation	22
Problems	24
1.3 Genetic Programming	25
Problems	29
2 Designing Simple Evolutionary Algorithms	33
2.1 Models of Evolution	35
Problems	39
2.2 Types of Crossover	41
Problems	44
2.3 Mutation	46
Problems	49
2.4 Population Size	50
Problems	51
2.5 A Nontrivial String Evolver	51
Problems	52
2.6 A Polymodal String Evolver	53
Problems	58
2.7 The Many Lives of Roulette Selection	60

	Problems	63
3	Optimizing Real-Valued Functions	67
3.1	The Basic Real Function Optimizer	69
	Problems	76
3.2	Fitness Landscapes	77
	Problems	80
3.3	Niche Specialization	82
	Problems	86
3.4	Path Length: An Extended Example	88
	Problems	91
3.5	Optimizing a Discrete-Valued Function: Crossing Numbers....	92
	Problems	95
4	Sunburn: Coevolving Strings.....	99
4.1	Definition of the Sunburn Model	99
	Problems	103
4.2	Implementing Sunburn	105
	Problems	108
4.3	Discussion and Generalizations	109
	Problems	113
4.4	Other Ways of Getting Burned	114
	Problems	117
5	Small Neural Nets : Symbots	119
5.1	Basic Symbot Description	121
	Problems	130
5.2	Symbot Bodies and Worlds	132
	Problems	135
5.3	Symbots with Neurons	135
	Problems	139
5.4	Pack Symbots.....	140
	Problems	142
6	Evolving Finite State Automata	143
6.1	Finite State Predictors	145
	Problems	151
6.2	Prisoner's Dilemma I	153
6.2.1	Prisoner's Dilemma Modeling the Real World	153
	Problems	161
6.3	Other Games	163
	Problems	165

7	Ordered Structures	167
7.1	Evolving Permutations	173
	Problems	178
7.2	The Traveling Salesman Problem	180
	Problems	187
7.3	Packing Things	190
	Problems	195
7.4	Costas Arrays	197
	Problems	204
8	Plus-One-Recall-Store	207
8.1	Overview of Genetic Programming	209
	Problems	212
8.2	The PORS Language	215
	Problems	221
8.3	Seeding Populations	223
	Problems	225
8.4	Applying Advanced Techniques to PORS	226
	Problems	230
9	Fitting to Data	231
9.1	Classical Least Squares Fit	231
	Problems	236
9.2	Simple Evolutionary Fit	238
	Problems	245
9.3	Symbolic Regression	248
	Problems	252
9.4	Automatically Defined Functions	253
	Problems	256
9.5	Working in Several Dimensions	257
	Problems	259
9.6	Introns and Bloat	261
	Problems	262
10	Tartarus: Discrete Robotics	263
10.1	The Tartarus Environment	265
	Problems	270
10.2	Tartarus with Genetic Programming	272
	Problems	277
10.3	Adding Memory to the GP language	279
	Problems	280
10.4	Tartarus with GP Automata	282
	Genetic Operations on GP automata	284
	Problems	288
10.5	Allocation of Fitness Trials	289

Problems	291
11 Evolving Logic Functions	293
11.1 Artificial Neural Nets	293
Problems	297
11.2 Evolving Logic Functions	298
Problems	305
11.3 Selecting the Net Topology	306
Problems	311
11.4 GP Logics	313
Problems	316
12 ISAc List: Alternative Genetic Programming	319
12.1 ISAc Lists: Basic Definitions	319
Done?	322
Generating ISAc Lists, Variation Operators	323
Data Vectors and External Objects	323
Problems	324
12.2 Tartarus Revisited	326
Problems	328
12.3 More Virtual Robotics	331
Problems	338
12.4 Return of the String Evolver	341
Problems	345
13 Graph-Based Evolutionary Algorithms	349
13.1 Basic Definitions and Tools	352
Problems	357
13.2 Simple Representations	359
Problems	362
13.3 More Complex Representations	365
Problems	370
13.4 Genetic Programming on Graphs	372
Problems	377
14 Cellular Encoding	381
14.1 Shape Evolution	382
Problems	387
14.2 Cellular Encoding of Finite State Automata	389
Problems	397
14.3 Cellular Encoding of Graphs	400
Problems	410
14.4 Context Free Grammar Genetic Programming	413
Problems	422

15 Application to Bioinformatics	425
15.1 Alignment of Transposon Insertion Sequences	425
Problems	433
15.2 PCR Primer Design	434
Problems	441
15.3 DNA Bar Codes	442
Problems	454
15.4 Visualizing DNA	456
15.5 Evolvable Fractals	460
Problems	469
Glossary	473
A Example Experiment Report	507
B Probability Theory	519
B.1 Basic Probability Theory	519
B.1.1 Choosing Things and Binomial Probability	522
B.1.2 Choosing Things to Count	523
B.1.3 Two Useful Confidence Intervals	527
B.2 Markov Chains	530
C A Review of Calculus and Vectors	537
C.1 Derivatives in One Variable	537
C.2 Multivariate Derivatives	540
C.3 Lamarckian Mutation with Gradients	542
C.4 The Method of Least Squares	543
D Combinatorial Graphs	545
D.1 Terminology and Examples	545
D.2 Coloring Graphs	550
D.3 Distances in Graphs	552
D.4 Traveling Salesman	553
D.5 Drawings of Graphs	553
References	555
Index	559

Evolutionary Computation for Modeling and Optimization

Ashlock, D.

2006, XX, 572 p., Hardcover

ISBN: 978-0-387-22196-0
