Preface	v
1 S and S-PLUS	1
1.1 Introduction	1
1.2 S Objects	2
1.2.1 Assignment	2
1.2.2 Class	3
1.2.3 Method	7
1.3 Modeling Functions in S+FinMetrics	8
1.3.1 Formula Specification	8
1.3.2 Method	11
1.4 S-PLUS Resources	12
1.4.1 Books	12
1.4.2 Internet	13
1.5 References	13
2 Time Series Specification, Manipulation, and Visualization in S-PLUS	15
2.1 Introduction	15
2.2 The Specification of “timeSeries” Objects in S-PLUS . . .	15
2.2.1 Basic Manipulations	18
2.2.2 S-PLUS “timeDate” Objects	19
2.2.3 Creating Common “timeDate” Sequences	24
2.2.4 Miscellaneous Time and Date Functions	28

2.2.5	Creating “timeSeries” Objects	28
2.2.6	Aggregating and Disaggregating Time Series	31
2.2.7	Merging Time Series	38
2.2.8	Dealing with Missing Values Using the S+FinMetrics Function interpNA	39
2.3	Time Series Manipulation in S-PLUS	40
2.3.1	Creating Lags and Differences	40
2.3.2	Return Definitions	43
2.3.3	Computing Asset Returns Using the S+FinMetrics Function getReturns	46
2.4	Visualizing Time Series in S-PLUS	48
2.4.1	Plotting “timeSeries” Using the S-PLUS Generic plot Function	48
2.4.2	Plotting “timeSeries” Using the S+FinMetrics Trellis Plotting Functions	52
2.5	References	55
3	Time Series Concepts	57
3.1	Introduction	57
3.2	Univariate Time Series	58
3.2.1	Stationary and Ergodic Time Series	58
3.2.2	Linear Processes and ARMA Models	64
3.2.3	Autoregressive Models	66
3.2.4	Moving Average Models	71
3.2.5	ARMA(p,q) Models	74
3.2.6	Estimation of ARMA Models and Forecasting	76
3.2.7	Martingales and Martingale Difference Sequences	83
3.2.8	Long-run Variance	85
3.2.9	Variance Ratios	88
3.3	Univariate Nonstationary Time Series	93
3.4	Long Memory Time Series	97
3.5	Multivariate Time Series	101
3.5.1	Stationary and Ergodic Multivariate Time Series	101
3.5.2	Multivariate Wold Representation	106
3.5.3	Long Run Variance	107
3.6	References	109
4	Unit Root Tests	111
4.1	Introduction	111
4.2	Testing for Nonstationarity and Stationarity	112
4.3	Autoregressive Unit Root Tests	114
4.3.1	Simulating the DF and Normalized Bias Distributions	116
4.3.2	Trend Cases	118
4.3.3	Dickey-Fuller Unit Root Tests	120

4.3.4	Phillips-Perron Unit Root Tests	127
4.4	Stationarity Tests	129
4.4.1	Simulating the KPSS Distributions	130
4.4.2	Testing for Stationarity Using the S+FinMetrics Function stationaryTest	131
4.5	Some Problems with Unit Root Tests	132
4.6	Efficient Unit Root Tests	132
4.6.1	Point Optimal Tests	133
4.6.2	DF-GLS Tests	134
4.6.3	Modified Efficient PP Tests	134
4.6.4	Estimating λ^2	135
4.6.5	Choosing Lag Lengths to Achieve Good Size and Power	135
4.7	References	138
5	Modeling Extreme Values	141
5.1	Introduction	141
5.2	Modeling Maxima and Worst Cases	142
5.2.1	The Fisher-Tippet Theorem and the Generalized Extreme Value Distribution	143
5.2.2	Estimation of the GEV Distribution	147
5.2.3	Return Level	153
5.3	Modeling Extremes Over High Thresholds	157
5.3.1	The Limiting Distribution of Extremes Over High Thresholds and the Generalized Pareto Distribution	159
5.3.2	Estimating the GPD by Maximum Likelihood	164
5.3.3	Estimating the Tails of the Loss Distribution	165
5.3.4	Risk Measures	171
5.4	Hill's Non-parametric Estimator of Tail Index	174
5.4.1	Hill Tail and Quantile Estimation	175
5.5	References	178
6	Time Series Regression Modeling	181
6.1	Introduction	181
6.2	Time Series Regression Model	182
6.2.1	Least Squares Estimation	183
6.2.2	Goodness of Fit	183
6.2.3	Hypothesis Testing	184
6.2.4	Residual Diagnostics	185
6.3	Time Series Regression Using the S+FinMetrics Function OLS	185
6.4	Dynamic Regression	201
6.4.1	Distributed Lags and Polynomial Distributed Lags .	205
6.4.2	Polynomial Distributed Lag Models	207

6.5	Heteroskedasticity and Autocorrelation Consistent Covariance Matrix Estimation	208
6.5.1	The Eicker-White Heteroskedasticity Consistent (HC) Covariance Matrix Estimate	209
6.5.2	Testing for Heteroskedasticity	211
6.5.3	The Newey-West Heteroskedasticity and Autocorrelation Consistent (HAC) Covariance Matrix Estimate	214
6.6	Recursive Least Squares Estimation	217
6.6.1	CUSUM and CUSUMSQ Tests for Parameter Stability	218
6.6.2	Computing Recursive Least Squares Estimates Using the S+FinMetrics Function RLS	219
6.7	References	221
7	Univariate GARCH Modeling	223
7.1	Introduction	223
7.2	The Basic ARCH Model	224
7.2.1	Testing for ARCH Effects	228
7.3	The GARCH Model and Its Properties	229
7.3.1	ARMA Representation of GARCH Model	230
7.3.2	GARCH Model and Stylized Facts	230
7.4	GARCH Modeling Using S+FinMetrics	232
7.4.1	GARCH Model Estimation	232
7.4.2	GARCH Model Diagnostics	235
7.5	GARCH Model Extensions	240
7.5.1	Asymmetric Leverage Effects and News Impact	241
7.5.2	Two Components Model	247
7.5.3	GARCH-in-the-Mean Model	250
7.5.4	ARMA Terms and Exogenous Variables in Conditional Mean Equation	252
7.5.5	Exogenous Explanatory Variables in the Conditional Variance Equation	254
7.5.6	Non-Gaussian Error Distributions	257
7.6	GARCH Model Selection and Comparison	260
7.6.1	Constrained GARCH Estimation	261
7.7	GARCH Model Prediction	262
7.8	GARCH Model Simulation	265
7.9	Conclusion	267
7.10	References	267
8	Long Memory Time Series Modeling	271
8.1	Introduction	271
8.2	Long Memory Time Series	272
8.3	Statistical Tests for Long Memory	276

8.3.1	R/S Statistic	276
8.3.2	GPH Test	278
8.4	Estimation of Long Memory Parameter	280
8.4.1	R/S Analysis	280
8.4.2	Periodogram Method	282
8.4.3	Whittle's Method	283
8.5	Estimation of FARIMA and SEMIFAR Models	284
8.5.1	Fractional ARIMA Models	285
8.5.2	SEMIFAR Model	292
8.6	Long Memory GARCH Models	296
8.6.1	FIGARCH and FIEGARCH Models	296
8.6.2	Estimation of Long Memory GARCH Models	297
8.6.3	Custom Estimation of Long Memory GARCH Models	301
8.7	Prediction from Long Memory Models	304
8.7.1	Prediction from FARIMA/SEMIFAR Models	304
8.7.2	Prediction from FIGARCH/FIEGARCH Models	308
8.8	References	309
9	Rolling Analysis of Time Series	313
9.1	Introduction	313
9.2	Rolling Descriptive Statistics	314
9.2.1	Univariate Statistics	314
9.2.2	Bivariate Statistics	321
9.2.3	Exponentially Weighted Moving Averages	323
9.2.4	Moving Average Methods for Irregularly Spaced High Frequency Data	327
9.2.5	Rolling Analysis of Miscellaneous Functions	334
9.3	Technical Analysis Indicators	337
9.3.1	Price Indicators	338
9.3.2	Momentum Indicators and Oscillators	338
9.3.3	Volatility Indicators	340
9.3.4	Volume Indicators	341
9.4	Rolling Regression	342
9.4.1	Estimating Rolling Regressions Using the S+FinMetrics Function <code>rollOLS</code>	343
9.4.2	Rolling Predictions and Backtesting	349
9.5	Rolling Analysis of General Models Using the S+FinMetrics Function <code>roll</code>	358
9.6	References	360
10	Systems of Regression Equations	361
10.1	Introduction	361
10.2	Systems of Regression Equations	362
10.3	Linear Seemingly Unrelated Regressions	364

10.3.1	Estimation	364
10.3.2	Analysis of SUR Models with the S+FinMetrics Function SUR	367
10.4	Nonlinear Seemingly Unrelated Regression Models	374
10.4.1	Analysis of Nonlinear SUR Models with the S+FinMetrics Function NLSUR	375
10.5	References	382
11	Vector Autoregressive Models for Multivariate Time Series	385
11.1	Introduction	385
11.2	The Stationary Vector Autoregression Model	386
11.2.1	Estimation	388
11.2.2	Inference on Coefficients	390
11.2.3	Lag Length Selection	390
11.2.4	Estimating VAR Models Using the S+FinMetrics Function VAR	390
11.3	Forecasting	398
11.3.1	Traditional Forecasting Algorithm	398
11.3.2	Simulation-Based Forecasting	402
11.4	Structural Analysis	406
11.4.1	Granger Causality	407
11.4.2	Impulse Response Functions	409
11.4.3	Forecast Error Variance Decompositions	414
11.5	An Extended Example	416
11.6	Bayesian Vector Autoregression	424
11.6.1	An Example of a Bayesian VAR Model	424
11.6.2	Conditional Forecasts	427
11.7	References	428
12	Cointegration	431
12.1	Introduction	431
12.2	Spurious Regression and Cointegration	432
12.2.1	Spurious Regression	432
12.2.2	Cointegration	435
12.2.3	Cointegration and Common Trends	437
12.2.4	Simulating Cointegrated Systems	437
12.2.5	Cointegration and Error Correction Models	441
12.3	Residual-Based Tests for Cointegration	444
12.3.1	Testing for Cointegration When the Cointegrating Vector Is Pre-specified	444
12.3.2	Testing for Cointegration When the Cointegrating Vector Is Estimated	447
12.4	Regression-Based Estimates of Cointegrating Vectors and Error Correction Models	450

12.4.1	Least Square Estimator	450
12.4.2	Stock and Watson's Efficient Lead/Lag Estimator	451
12.4.3	Estimating Error Correction Models by Least Squares	454
12.5	VAR Models and Cointegration	455
12.5.1	The Cointegrated VAR	456
12.5.2	Johansen's Methodology for Modeling Cointegration	458
12.5.3	Specification of Deterministic Terms	459
12.5.4	Likelihood Ratio Tests for the Number of Cointegrating Vectors	461
12.5.5	Testing Hypothesis on Cointegrating Vectors Using the S+FinMetrics Function <code>coint</code>	463
12.5.6	Maximum Likelihood Estimation of the Cointegrated VECM	467
12.5.7	Maximum Likelihood Estimation of the Cointegrated VECM Using the S+FinMetrics Function <code>VECM</code>	468
12.5.8	Forecasting from the VECM	474
12.6	Appendix: Maximum Likelihood Estimation of a Cointegrated VECM	476
12.7	References	478
13	Multivariate GARCH Modeling	481
13.1	Introduction	481
13.2	Exponentially Weighted Covariance Estimate	482
13.3	Diagonal VEC Model	486
13.4	Multivariate GARCH Modeling in S+FinMetrics	487
13.4.1	Multivariate GARCH Model Estimation	487
13.4.2	Multivariate GARCH Model Diagnostics	490
13.5	Multivariate GARCH Model Extensions	496
13.5.1	Matrix-Diagonal Models	496
13.5.2	BEKK Models	498
13.5.3	Univariate GARCH-based Models	499
13.5.4	ARMA Terms and Exogenous Variables	504
13.5.5	Multivariate Conditional t-Distribution	508
13.6	Multivariate GARCH Prediction	509
13.7	Custom Estimation of GARCH Models	512
13.7.1	GARCH Model Objects	512
13.7.2	Revision of GARCH Model Estimation	514
13.8	Multivariate GARCH Model Simulation	515
13.9	References	517
14	State Space Models	519
14.1	Introduction	519

14.2	State Space Representation	520
14.2.1	Initial Conditions	521
14.2.2	State Space Representation in S+FinMetrics/SsfPack	521
14.2.3	Missing Values	527
14.2.4	S+FinMetrics/SsfPack Functions for Specifying the State Space Form for Some Common Time Series Models	528
14.2.5	Simulating Observations from the State Space Model	540
14.3	Algorithms	543
14.3.1	Kalman Filter	543
14.3.2	Kalman Smoother	543
14.3.3	Smoothed State and Response Estimates	544
14.3.4	Smoothed Disturbance Estimates	544
14.3.5	Forecasting	544
14.3.6	S+FinMetrics/SsfPack Implementation of State Space Modeling Algorithms	545
14.4	Estimation of State Space Models	552
14.4.1	Prediction Error Decomposition of Log-Likelihood	552
14.4.2	Fitting State Space Models Using the S+FinMetrics/SsfPack Function SsfFit	554
14.4.3	Quasi-Maximum Likelihood Estimation	561
14.5	Simulation Smoothing	565
14.6	References	566
15	Factor Models for Asset Returns	569
15.1	Introduction	569
15.2	Factor Model Specification	570
15.3	Macroeconomic Factor Models for Returns	571
15.3.1	Sharpe's Single Index Model	572
15.3.2	The General Multifactor Model	577
15.4	Fundamental Factor Model	580
15.4.1	BARRA-type Single Factor Model	581
15.4.2	BARRA-type Industry Factor Model	582
15.5	Statistical Factor Models for Returns	590
15.5.1	Factor Analysis	590
15.5.2	Principal Components	597
15.5.3	Asymptotic Principal Components	606
15.5.4	Determining the Number of Factors	610
15.6	References	614
16	Term Structure of Interest Rates	617
16.1	Introduction	617

16.2	Discount, Spot and Forward Rates	618
16.2.1	Definitions and Rate Conversion	618
16.2.2	Rate Conversion in S+FinMetrics	619
16.3	Quadratic and Cubic Spline Interpolation	620
16.4	Smoothing Spline Interpolation	624
16.5	Nelson-Siegel Function	628
16.6	Conclusion	632
16.7	References	633
17	Robust Change Detection	635
17.1	Introduction	635
17.2	REGARIMA Models	636
17.3	Robust Fitting of REGARIMA Models	637
17.4	Prediction Using REGARIMA Models	642
17.5	Controlling Robust Fitting of REGARIMA Models	643
17.5.1	Adding Seasonal Effects	643
17.5.2	Controlling Outlier Detection	645
17.5.3	Iterating the Procedure	647
17.6	Algorithms of Filtered τ -Estimation	649
17.6.1	Classical Maximum Likelihood Estimates	650
17.6.2	Filtered τ -Estimates	651
17.7	References	651
18	Nonlinear Time Series Models	653
18.1	Introduction	653
18.2	BDS Test for Nonlinearity	654
18.2.1	BDS Test Statistic	655
18.2.2	Size of BDS Test	655
18.2.3	BDS Test as a Nonlinearity Test and a Misspecification Test	657
18.3	Threshold Autoregressive Models	662
18.3.1	TAR and SETAR Models	663
18.3.2	Tsay's Approach	664
18.3.3	Hansen's Approach	671
18.4	Smooth Transition Autoregressive Models	678
18.4.1	Logistic and Exponential STAR Models	678
18.4.2	Test for STAR Nonlinearity	680
18.4.3	Estimation of STAR Models	683
18.5	Markov Switching State Space Models	687
18.5.1	Discrete State Markov Process	688
18.5.2	Markov Switching AR Process	690
18.5.3	Markov Switching State Space Models	691
18.6	An Extended Example: Markov Switching Coincident Index	701
18.6.1	State Space Representation of Markov Switching Co- incident Index Model	702

18.6.2	Approximate MLE of Markov Switching Coincident	
	Index	705
18.7	References	709
19	Copulas	713
19.1	Introduction	713
19.2	Motivating Example	714
19.3	Definitions and Basic Properties of Copulas	722
19.3.1	Properties of Distributions	722
19.3.2	Copulas and Sklar's Theorem	724
19.3.3	Dependence Measures and Copulas	726
19.4	Parametric Copula Classes and Families	729
19.4.1	Normal Copula	729
19.4.2	Normal Mixture Copula	730
19.4.3	Extreme Value Copula Class	730
19.4.4	Archimedean Copulas	732
19.4.5	Archimax Copulas	735
19.4.6	Representation of Copulas in S+FinMetrics	735
19.4.7	Creating Arbitrary Bivariate Distributions	743
19.4.8	Simulating from Arbitrary Bivariate Distributions	745
19.5	Fitting Copulas to Data	747
19.5.1	Empirical Copula	747
19.5.2	Maximum Likelihood Estimation	750
19.5.3	Fitting Copulas Using the S+FinMetrics /EVANESCE Function <code>fit.copula</code>	751
19.6	Risk Management Using Copulas	754
19.6.1	Computing Portfolio Risk Measures Using Copulas	754
19.6.2	Computing VaR and ES by Simulation	755
