Part I Algebraic Preliminaries

1	Polynomial Matrices	3
1.1	Basic Concepts of Algebra	3
1.2	Polynomials	5
1.3	Matrices over Rings	7
1.4	Polynomial Matrices	10
1.5	Left and Right Equivalence of Polynomial Matrices	12
1.6	Row and Column Reduced Matrices	15
1.7	Equivalence of Polynomial Matrices	20
1.8	Normal Rank of Polynomial Matrices	21
1.9	Invariant Polynomials and Elementary Divisors	23
1.10	Latent Equations and Latent Numbers	26
1.11	Simple Matrices	29
1.12	Pairs of Polynomial Matrices	34
1.13	Polynomial Matrices of First Degree (Pencils)	38
1.14	Cyclic Matrices	44
1.15	Simple Realisations and Their Structural Stability	49
2	Fractional Rational Matrices	53
2.1	Rational Fractions	53
2.2	Rational Matrices	59
2.3	McMillan Canonical Form	60
2.4	Matrix Fraction Description (MFD)	63
2.5	Double-sided MFD (DMFD)	73
2.6	Index of Rational Matrices	74
2.7	Strictly Proper Rational Matrices	77
2.8	Separation of Rational Matrices	82
2.9	Inverses of Square Polynomial Matrices	85
2.10	Transfer Matrices of Polynomial Pairs	87
2.11	Transfer Matrices of PMDs	90

2.12	Subordination of Rational Matrices	94
2.13	Dominance of Rational Matrices	99
3	Normal Rational Matrices	105
3.1	Normal Rational Matrices	105
3.2	Algebraic Properties of Normal Matrices	110
3.3	Normal Matrices and Simple Realisations	114
3.4	Structural Stable Representation of Normal Matrices	116
3.5	Inverses of Characteristic Matrices of Jordan and Frobenius Matrices	122
3.6	Construction of Simple Jordan Realisations	126
3.7	Construction of Simple Frobenius Realisations	132
3.8	Construction of S-representations from Simple Realisations. General Case	136
3.9	Construction of Complete MFDs for Normal Matrices	138
3.10	Normalisation of Rational Matrices	141

Part II General MIMO Control Problems

4	Assignment of Eigenvalues and Eigenstructures by Polynomial Methods	149
4.1	Problem Statement	149
4.2	Basic Controllers	151
4.3	Recursive Construction of Basic Controllers	154
4.4	Dual Models and Dual Bases	161
4.5	Eigenvalue Assignment for Polynomial Pairs	165
4.6	Eigenvalue Assignment by Transfer Matrices	169
4.7	Structural Eigenvalue Assignment for Polynomial Pairs	172
4.8	Eigenvalue and Eigenstructure Assignment for PMD Processes	174
5	Fundamentals for Control of Causal Discrete-time LTI Processes	183
5.1	Finite-dimensional Discrete-time LTI Processes	183
5.2	Transfer Matrices and Causality of LTI Processes	189
5.3	Normal LTI Processes	191
5.4	Anomalous LTI Processes	197
5.5	Forward and Backward Models	209
5.6	Stability of Discrete-time LTI Systems	222
5.7	Closed-loop LTI Systems of Finite Dimension	225
5.8	Stability and Stabilisation of the Closed Loop	230

Part III Frequency Methods for MIMO SD Systems

6	Parametric Discrete-time Models of Continuous-time Multivariable Processes	241
6.1	Response of Linear Continuous-time Processes to Exponential-periodic Signals	241
6.2	Response of Open SD Systems to Exp.per. Inputs	245
6.3	Functions of Matrices	250
6.4	Matrix Exponential Function	256
6.5	DPFR and DLT of Rational Matrices	258
6.6	DPFR and DLT for Modulated Processes	261
6.7	Parametric Discrete Models of Continuous Processes	266
6.8	Parametric Discrete Models of Modulated Processes	271
6.9	Reducibility of Parametric Discrete Models	275
7	Description and Stability of SD Systems	279
7.1	The Standard Sampled-data System	279
7.2	Equation Discretisation for the Standard SD System	280
7.3	Parametric Transfer Matrix (PTM)	283
7.4	PTM as Function of the Argument s	289
7.5	Internal Stability of the Standard SD System	295
7.6	Polynomial Stabilisation of the Standard SD System	298
7.7	Modal Controllability and the Set of Stabilising Controllers	304
8	Analysis and Synthesis of SD Systems Under Stochastic Excitation	307
8.1	Quasi-stationary Stochastic Processes in the Standard SD System	307
8.2	Mean Variance and \mathcal{H}_2 -norm of the Standard SD System	312
8.3	Representing the PTM in Terms of the System Function	315
8.4	Representing the \mathcal{H}_2 -norm in Terms of the System Function	325
8.5	Wiener-Hopf Method	331
8.6	Algorithm for Realisation of Wiener-Hopf Method	332
8.7	Modified Optimisation Algorithm	336
8.8	Transformation to Forward Model	340
9	\mathcal{H}_2 Optimisation of a Single-loop System	347
9.1	Single-loop Multivariable SD System	347
9.2	General Properties	348
9.3	Stabilisation	353
9.4	Wiener-Hopf Method	354
9.5	Factorisation of Quasi-polynomials of Type 1	355
9.6	Factorisation of Quasi-polynomials of Type 2	364
9.7	Characteristic Properties of Solution for Single-loop System	373

9.8	Simplified Method for Elementary System	374
10	\mathcal{L}_2-Design of SD Systems	381
10.1	Problem Statement	381
10.2	Pseudo-rational Laplace Transforms	383
10.3	Laplace Transforms of Standard SD System Output	387
10.4	Investigation of Poles of the Image $Z(s)$	392
10.5	Representing the Output Image in Terms of the System Function	397
10.6	Representing the \mathcal{L}_2 -norm in Terms of the System Function ..	399
10.7	Wiener-Hopf Method	402
10.8	General Properties of Optimal Systems	407
10.9	Modified Optimisation Algorithm	409
10.10	Single-loop Control System	410
10.11	Wiener-Hopf Method for Single-loop Tracking System	412
10.12	\mathcal{L}_2 Redesign of Continuous-time LTI Systems under Persistent Excitation	416
10.13	\mathcal{L}_2 Redesign of a Single-loop LTI System	426
<hr/>		
Appendices		
<hr/>		
A	Operator Transformations of Taylor Sequences	431
B	Sums of Certain Series	435
C	<i>DirectSDM</i> – A Toolbox for Optimal Design of Multivariable SD Systems	437
C.1	Introduction	437
C.2	Data Structures	437
C.3	Operations with Polynomial Matrices	438
C.4	Auxiliary Algorithms	440
C.5	\mathcal{H}_2 -optimal Controller	440
C.5.1	Extended Single-loop System	440
C.5.2	Function sdh2	442
C.6	\mathcal{L}_2 -optimal Controller	443
C.6.1	Extended Single-loop System	443
C.6.2	Function sd12	445
D	Design of SD Systems with Guaranteed Performance	447
D.1	Introduction	447
D.2	Design for Guaranteed Performance	448
D.2.1	System Description	448
D.2.2	Problem Statement	450
D.2.3	Calculation of Performance Criterion	451

D.2.4 Minimisation of Performance Criterion Estimate for
 SD Systems..... 452

D.3 MATLAB®-Toolbox *GarSD*..... 453

 D.3.1 Structure..... 453

 D.3.2 Setting Properties of External Excitations 454

 D.3.3 Investigation of SD Systems 455

References..... 461
