
Table of Contents

1	INTRODUCTION	1
1.1	Historic Examples of Ultracentrifugation	2
1.1.1	Investigations on Gold Colloids in 1924	3
1.1.2	Investigations on the Structure of DNA in 1957	5
1.2	Basic Theory of Ultracentrifugation	7
1.2.1	Svedberg's Simplified Theory	8
1.2.2	Derivation of Lamm's Equation	10
1.3	Basic Experiment Types of Ultracentrifugation	12
1.3.1	Sedimentation Velocity Experiment	12
1.3.2	Synthetic Boundary Experiment	13
1.3.3	Sedimentation Equilibrium	13
1.3.4	Density Gradient	14
1.3.5	Approach-to-Equilibrium (or Archibald) Method	15
1.4	Closing Remarks	15
	References	16
2	ANALYTICAL ULTRACENTRIFUGATION, INSTRUMENTATION	17
2.1	Ultracentrifuges	18
2.1.1	The Beckman-Coulter Optima XL-A/I	19
2.1.2	User-Made Centrifuges	21
2.2	Rotors	25
2.3	Measuring Cells	26
2.4	Detectors	29
2.4.1	Absorption Optics	31
2.4.2	Interference Optics	34
2.4.3	Schlieren Optics	37
2.4.4	Other Detectors	38
2.5	Multiplexer	43
2.6	Auxiliary Measurements	43
2.6.1	Measurement of the Solvent Density and the Partial Specific Volume	43
2.6.2	Measurement of the Refractive Index and the Specific Refractive Index Increment	45
	References	46

3	SEDIMENTATION VELOCITY	47
3.1	Introduction	47
3.2	Basic Example of Sedimentation Velocity	47
3.2.1	Determination of s	50
3.2.2	Standard Conditions for s Estimation	51
3.2.3	Radial Dilution and Thickening	52
3.2.4	Concentration Dependence	53
3.3	Advanced Theory of Sedimentation Velocity Runs	54
3.3.1	Johnston–Ogston Effect	54
3.3.2	Self-Sharpening of Boundaries	55
3.3.3	Pressure Dependence	55
3.3.4	Speed Dependence	56
3.3.5	Charge Effects	57
3.3.6	Separation of Sedimentation and Diffusion	58
3.3.7	Test of Homogeneity	61
3.4	Sedimentation Velocity Runs of Macromolecules to Measure Average M and MMD	62
3.4.1	Evaluation of the Average Molar Mass M by Sedimentation Velocity Runs via Scaling Laws	62
3.4.2	Evaluation of Molar Mass Distributions (MMD) by Sedimentation Velocity Runs via Scaling Laws	64
3.5	Sedimentation Velocity Runs on Particles to Measure Average d_p and PSD	69
3.5.1	Particle Size Distribution via AUC Turbidity Detector and Mie Theory	70
3.5.2	Coupling Technique to Measure very Broad PSD	77
3.5.3	H_2O – D_2O Density Variation Method to Measure Particle Densities via Sedimentation Velocity Runs	80
3.5.4	PSD Measurement of very Small Platinum Clusters Using UV Optics	84
3.6	Synthetic Boundary Experiments	86
3.6.1	Synthetic Boundary Crystallization Ultracentrifugation	93
	References	95
4	DENSITY GRADIENTS	97
4.1	Introduction	98
4.2	Static Density Gradients	101
4.2.1	Theory of Static Density Gradients	102
4.2.2	Gradient Materials	115
4.2.3	Experimental Procedure	117
4.2.4	Examples	118
4.3	Dynamic Density Gradients	120
4.4	Other Types of Density Gradients	125
4.4.1	Percoll Density Gradient	125
	References	129

5	SEDIMENTATION EQUILIBRIUM	131
5.1	Introduction	131
5.2	Experimental Procedure	133
5.3	Data Analysis	138
5.3.1	Basic Equations for Molar Mass Averages – Classical Evaluation of AUC Equilibrium Runs	138
5.3.2	Basic Equations for Molar Mass Distributions – Nonlinear Regression Evaluation (Lechner Method)	141
5.3.3	Application of the Basic Equations – Classical and Nonlinear Regression Evaluation	144
5.3.4	M-STAR, a Special Data Analysis to obtain M_w	149
5.4	Examples	151
5.4.1	Absorption Optics Examples of a Polyelectrolyte and Calibration Polystyrene NBS 706	152
5.4.2	Association Equilibrium Example and AUC Buoyant Density Method to Determine \bar{v}	155
5.4.3	The New Fluorescence Detector of Laue Used for Green Fluorescent Protein	158
5.5	Further AUC Methods to Measure Molar Masses	159
	References	162
6	PRACTICAL EXAMPLES OF COMBINATION OF METHODS	163
6.1	Combination of Different AUC Methods	163
6.1.1	Core/Shell Particles	163
6.1.2	Characterization of Microgels and Nanogels	170
6.1.3	Ion Exchange in Carboxylated Latices	179
6.2	Combination of AUC with Other Techniques	189
6.2.1	AUC and SFFF	190
6.2.2	AUC and EM	198
6.3	Literature Examples: AUC and Nanoparticles	212
	References	212
7	RECENT DEVELOPMENTS AND FUTURE OUTLOOK	215
7.1	New AUC Instrumentation and Detectors	216
7.2	New AUC Methods	222
7.3	New AUC Data Analysis	228
	References	233
8	SUBJECT INDEX	235

Analytical Ultracentrifugation of Polymers and
Nanoparticles

Maehtle, W.; Börger, L.

2006, XIII, 237 p., Hardcover

ISBN: 978-3-540-23432-6
