1 Into Ambient Intelligence

<i>E. Aarts and J. Encarnação</i>	1
1.1 The Vision	1
1.2 Trends and Opportunities	2
1.2.1 “More Moore” and “More than Moore”	3
1.2.2 Weaving the Web	3
1.2.3 The Experience Economy	4
1.2.4 Advances in Design	5
1.3 A Brief History of Ambient Intelligence	6
1.3.1 Early Developments at Philips	6
1.3.2 Opening up the Vision	7
1.3.3 Where Are We Headed?	8
1.4 Realizing Ambient Intelligence	10
1.4.1 For the Well-Being	10
1.4.2 Reorientation	11
1.4.3 Impact Through Integration	13
1.4.4 Turning Vision into Reality	14
1.5 Ambient Intelligence Becomes a Success	16

2 Information, Society and Technology: Close Encounters of a Different Kind

<i>J.-C. Burgelman and Y. Punie</i>	19
2.1 Introduction	19
2.2 The AmI Vision: A Different Encounter Between Technology and Society	21
2.2.1 Shifts from Technology to Usage	21
2.2.2 Shifts in EU RTD Framework Programmes	22
2.2.3 Designing Ambient Intelligence is Designing Social Structures	23
2.3 IST, the European Social Model and the Lisbon Objectives	25
2.4 Foresight in IST in Europe	27
2.4.1 Social Drivers	27
2.4.2 Promising IST Applications	28

XIV Contents

2.5	AmI Innovation in Europe	29
2.5.1	AmI and eLearning	30
2.5.2	AmI and eHealth	31
2.5.3	AmI and eGovernment	32
2.5.4	AmI and eIdentification	33
2.6	Conclusions	35

3 Ambient Culture

<i>S. Marzano</i>	37
3.1 Prelude	37
3.2 Questions, Questions, Questions	37
3.3 What Should Ambient Intelligence Do?	38
3.3.1 Fundamental Human Drives	38
3.3.2 Social and Physical Constraints	40
3.3.3 Potential for Growth, Profit, and Wealth	41
3.4 How Will Ambient Intelligence Do What It Does?	41
3.4.1 Relevant, Meaningful, Understandable	42
3.5 Some Examples	43
3.5.1 La Casa Prossima Futura	43
3.5.2 New Nomads	44
3.5.3 Living Memory	45
3.6 How Do We Create the “Right” Ambient Intelligence – the Relevant Hypothesis for a Desirable Future?	46
3.6.1 Imagineering.....	47
3.6.2 Communication	48
3.6.3 Getting Real.....	48
3.6.4 Into Production	49
3.7 Business Issues	49
3.7.1 Partnerships	49
3.7.2 Bottom of the Pyramid	50
3.8 Deeper Issues	51
3.8.1 Educating Our Intelligent Objects	51
3.8.2 The Next Challenge	52
3.8.3 Where Is the Boundary?	52
3.8.4 Which Reality Is Real?.....	53
3.9 How to Measure Intelligence?	54
3.10 The Culture of Ambient Intelligence – Human Culture in the Broadest Sense	54

4 Smart Materials

<i>D.J. Broer, H. van Houten, M. Ouwerkerk, J.M.J. den Toonder, P. van der Sluis, S.I. Klink, R.A.M. Hikmet, and R. Balkenende</i>		55
4.1	Introduction	55
4.2	Chromogenic Materials	56

4.3	Thermochromic Skins Based on Liquid Crystals	58
4.4	Switchable Mirrors	60
4.5	Switchable Cholesteric Mirrors	63
4.6	Electronic Skins and Paintable Displays	65
4.7	Polymers with a Mechanical Response	68
4.7.1	Electrically Stimulated Responsive Polymers	70
4.7.2	Temperature-Driven Responsive Polymers	78
4.7.3	Light-Driven Polymer Smart Materials	81
4.7.4	Other Stimuli	83
5 Electronic Dust and e-Grains		
	<i>H. Reichl and M. J. Wolf</i>	85
5.1	Introduction	85
5.2	Basic Construction of Self-Sufficient Wireless Sensor Nodes – e-Grains	87
5.3	System Design	89
5.4	System Integration Technologies	91
5.4.1	Stacking of Organic Substrates	92
5.4.2	Integration of Flexible Functional Layers	95
5.5	Embedded Components in Organic Substrates	103
5.6	Wafer-Level Integration by Chip or Wafer Stacking	104
5.7	Autonomous Energy Supply for e-Grains	107
5.8	Wafer-Level Integration of Lithium-Polymer Batteries	108
5.9	Micro-fuel Cell Integration	109
5.10	Summary and Outlook	112
6 Electronic Textiles		
	<i>H. Reichl, C. Kallmayer, and T. Linz</i>	115
6.1	Introduction	115
6.2	Conductors	117
6.2.1	Textile Wires	117
6.2.2	Metallized Threads	117
6.2.3	Intrinsically Conductive Yarn	118
6.2.4	Resistance	118
6.3	Textile Processing with Conductive Threads	119
6.3.1	Weaving	119
6.3.2	Embroidery	120
6.4	Interconnection and Packaging	121
6.4.1	Embroidered Contacts	121
6.4.2	Detachable Interconnections	122
6.4.3	Dimensions and Precision	123
6.4.4	Encapsulation	123
6.5	Applications	124
6.5.1	ECG Shirt	124
6.5.2	Communication Jacket	126
6.5.3	Textile Transponder	127

6.6	Future Challenges	129
6.7	Conclusion and Outlook	131
7 Computing Platforms		
	<i>H. De Man and R. Lauwereins</i>	133
7.1	Reconsidering the Vision	133
7.2	“More-Moore”: Managing Giga-complexity	134
7.2.1	Managing the Architectural Gap	135
7.2.2	Managing the Physical Gap: Nano-scale Realities Hit Platform Architects	138
7.2.3	Future Computing Platforms: Towards Highly Parallel Tile-based Network-on-a-Chip (NoC)	141
7.2.4	The Devil Is in the Software	145
7.3	“More-Than-Moore”: Ultra-creativity for Ultra-low Power and Cost	146
7.4	Conclusions	148
8 Software Platforms		
	<i>N. Georgantas, P. Inverardi, and V. Issarny</i>	151
8.1	Introduction	151
8.2	Software Systems for Ambient Intelligence	152
8.2.1	Software Architectures	153
8.2.2	Middleware	154
8.2.3	Architectural Framework for Software Systems	155
8.3	Aura: User Task-Driven Environment Configuration	157
8.3.1	Architecture	157
8.3.2	Triggers to Dynamic Behavior	158
8.3.3	Dynamic Behavior	159
8.4	Gaia: Programmable Active Spaces	160
8.4.1	Architecture	160
8.4.2	Triggers to Dynamic Behavior	162
8.4.3	Dynamic Behavior	163
8.5	WSAMI: Ad hoc, Decentralized AmI Environments	164
8.5.1	Architecture	164
8.5.2	Triggers to Dynamic Behavior	166
8.5.3	Dynamic Behavior	167
8.6	Assessment and Research Challenges	168
9 Mobile Computing		
	<i>B. Svendsen</i>	171
9.1	Computing Everywhere and Anywhere	171
9.2	Applications of Mobile Computing	172
9.2.1	Your Personal Economy Will Be in Your Pocket	172
9.2.2	Electronic Tags Replace Bar Codes and Add More to It ...	173
9.2.3	The House Knows What You Are Up To	173
9.2.4	Attentive Vehicles – Road and Transport Safety	174

9.2.5	Public Services for Citizens	175
9.2.6	Monitoring Product Quality Improves Food Safety	175
9.3	In the Bottom Lies the Technology	176
9.3.1	Wireless Communication	176
9.3.2	Wireless Location	177
9.3.3	Multistandard and Flexible – Software Radio	178
9.3.4	Wireless Proximity Technologies – Electronics Tags	178
9.3.5	Wireless Concepts and Technologies for Novel Applications	180
9.4	Challenges Imposed on the Domain by Ambient Intelligence	181
9.5	How Far Have We Come?	182
9.5.1	Buying and Paying by the Mobile Phone	182
9.5.2	Retail Chains are Starting to Use Electronic Tags	182
9.5.3	Electronic Luggage Tags at Airports	183
9.5.4	Introducing Electronic Passports	183
9.5.5	Electronic Shepherds and Surveillance	184
9.5.6	Mobile Phone as Tourist Guide	185
9.5.7	Attentive Vehicles Seek to Prevent Road Accidents	185
9.6	Concluding Remarks	186
 10 Broadband Communication		
	<i>P. Lagasse and I. Moerman</i>	187
10.1	Vision	187
10.2	Ongoing Evolutions in Broadband Communication	188
10.3	Too Many Wireless Technologies Today?	189
10.3.1	Overview of Existing Wireless Technologies	189
10.3.2	Do We Really Need All Those Technologies?	192
10.4	How to Deal with All These Wireless Technologies?	194
10.4.1	The Concept of Personal Networking	194
10.4.2	Main Challenges of Personal Networks	198
10.4.3	Some Personal Network Solutions	201
10.5	Conclusions	206
 11 e-Infrastructure and e-Science		
	<i>T. Hey, D. De Roure, and A.E. Trefethen</i>	211
11.1	Introduction	211
11.2	e-Science and the Grid	212
11.2.1	The e-Science Vision	212
11.2.2	The e-Science Infrastructure	213
11.2.3	Web Service Grids	214
11.2.4	The “Data Deluge” as a Driver for e-Science	215
11.3	Pervasive Computing and Ambient Intelligence	217
11.3.1	Sensor Networks	218
11.3.2	Interaction	219
11.3.3	Intelligence	219

XVIII Contents

11.4	The Semantic Web	220
11.4.1	Towards a Semantic Grid	221
11.4.2	Semantic Web and Pervasive Computing	222
11.5	The Symbiosis of Grid and Ambient Intelligent Computing	223
11.5.1	Devices Need the Grid for Computation	223
11.5.2	Devices Need the Grid for Integration	223
11.5.3	The Grid Needs Devices to Interface with the Physical World	224
11.5.4	Virtualization	224
11.5.5	The Information Systems Perspective	224
11.5.6	Grid Computation on Networks of Devices	225
11.5.7	Self-organization	225
11.6	Case Studies	225
11.6.1	CombeChem	226
11.6.2	Grid Based Medical Devices for Everyday Health	227
11.6.3	FloodNet	228
11.7	Challenges to the Vision	229
11.8	Conclusions	230
12 Context Aware Services		
<i>J.L. Crowley, P. Reignier, and J. Coutaz</i>		233
12.1	Introduction	233
12.2	A Brief History of Context	234
12.2.1	Context in Artificial Intelligence	234
12.2.2	Context in Computer Vision	235
12.2.3	Context in Mobile Computing	235
12.2.4	Defining Context	235
12.3	A Conceptual Framework for Context Aware Systems	236
12.3.1	A Layered Model for Context Aware Services	237
12.4	Defining Situation Models as Interaction Scripts	238
12.4.1	Principle 1: Keep It Simple	239
12.4.2	Principle 2: Behaviour Drives Design	239
12.5	Example: Context Aware Automatic Video Acquisition	240
12.5.1	Sample Recording from Context Aware Automatic Video Acquisition System	244
12.6	Learning Context Models: Adaptation and Development	244
12.7	Conclusions	246
13 Computational Intelligence		
<i>E. Aarts, H. ter Horst, J. Korst, and W. Verhaegh</i>		247
13.1	Introduction	247
13.2	Machine Intelligence	248
13.2.1	Artificial Intelligence	248
13.2.2	Movie Script Scenarios for Ambient Intelligence	249
13.2.3	Social Versus Cognitive Intelligence	251

13.3	AmI Elements of Social Intelligence	252
13.3.1	See, Hear, Feel	253
13.3.2	Understand, Interpret, Relate	254
13.3.3	Look, Find, Remember	255
13.3.4	Act, Adapt, Learn	257
13.3.5	Create, Express, Emerge	258
13.4	Computational Paradigms	259
13.4.1	Search	259
13.4.2	Reasoning	263
13.4.3	Learning	267
13.4.4	Evolution	270
13.5	Intrinsic Limitations	273
13.6	Concluding Challenges	274
 14 Social User Interfaces		
	<i>A. Nijholt, D. Heylen, B. de Ruyter, and P. Saini</i>	277
14.1	Introduction	277
14.2	Social Interfaces and Multimodal Interaction	279
14.3	The Impact of Affect and Social Intelligence: the iCat Case	282
14.3.1	Experiment	283
14.3.2	Tasks	285
14.3.3	Measures	285
14.3.4	Results	286
14.4	Modeling Affect in a Dialogical Robot	287
14.4.1	Multimodal Interaction	287
14.4.2	Affective Interactions	289
14.5	Conclusions and Future Research	291
 15 Multimodal Human–Environment Interaction		
	<i>R. Wasinger and W. Wahlster</i>	293
15.1	Introduction	293
15.2	Tangible Multimodal Dialog Scenario	294
15.3	Instrumented Environment Infrastructure	296
15.4	Symmetric Multimodal Interaction	298
15.4.1	Base Modalities	299
15.4.2	Symmetric Modality Combinations	300
15.4.3	Output Modality Allocation Strategy	301
15.5	Anthropomorphized Products	302
15.5.1	The Role of Anthropomorphization	302
15.5.2	Adding Human-like Characteristics	303
15.5.3	State-Based Object Model	304
15.6	Usability Study	305
15.6.1	Method	305
15.6.2	Results	306
15.6.3	Lessons Learnt	307
15.7	Conclusions and Future Work	307

16 Intelligent Media

<i>P. Treleaven and S. Emmott</i>	309
16.1 Introduction	309
16.2 Emergence of Intelligent Media	310
16.3 Economic Importance of the Creative Industries	311
16.4 Intelligent Media: Key Concepts and Technologies	311
16.4.1 Key Concepts	312
16.4.2 Key Technologies	313
16.5 Intelligent Media and the Creative Sectors	314
16.5.1 Film and Television	315
16.5.2 Music	315
16.5.3 Cultural Sectors	317
16.5.4 Design	318
16.5.5 Leisure Sectors	318
16.5.6 Advertising	319
16.6 Conclusion	321

17 Smart Environments

<i>T. Kirste</i>	323
17.1 Introduction	323
17.2 Smart Environments	324
17.3 Building Smart Environments: the Ensemble Challenge	327
17.3.1 Another Scenario	327
17.3.2 ... and Its Implications	328
17.3.3 Significant Changes	329
17.4 The Source of Strategy	331
17.5 Goal-Based Interaction	332
17.6 Appliances and Event Processing Pipelines	335
17.6.1 Looking at Appliances	335
17.6.2 Towards a Middleware for Self-Organizing Ensembles	336
17.6.3 Ensemble Organization by SodaPop	338
17.7 Conclusion	339

18 Sensory Augmented Computing

<i>B. Schiele</i>	341
18.1 Introduction	341
18.2 Sensing Opportunities for Ambient Intelligence	342
18.2.1 The Logical View: Dimensions of Sensing	342
18.2.2 Physical View: Placement of Sensors	343
18.2.3 Sensors in AmI Research	343
18.2.4 Discussion	345
18.3 Proactive Furniture	345
18.4 Sensing a Furniture Assembly	346
18.4.1 The IKEA PAX Wardrobe	346

18.4.2	Assembly Plan	347
18.4.3	Observing the User's Actions	349
18.4.4	Sensor Experiments	350
18.4.5	Detecting Partial Actions	351
18.4.6	Detecting Complete Actions	352
18.5	Situation-Aware Affordances	353
18.5.1	General Concept	353
18.5.2	Specific Solution	354
18.5.3	Summary of a User Study	356
18.6	Conclusions and Discussion	357
 19 Experience Design		
	<i>B. Eggen and S. Kyffin</i>	361
19.1	Introduction	361
19.2	Looking to the Future	362
19.2.1	Disappearing Technology	362
19.2.2	The Future Seen from a People's Point of View	365
19.3	The Home Experience	366
19.4	Design Insights of AmI Systems	367
19.5	New Directions	372
19.5.1	Multimodal Interaction	372
19.5.2	Interaction with Intelligent Tangible Objects	374
19.5.3	Ambient Culture	375
19.5.4	User-Centered Design	376
19.6	Conclusion	378
 20 Experience Research		
	<i>E. T. Hvannberg</i>	379
20.1	Introduction	379
20.2	Goals of Experience Research	381
20.3	EARC Life Cycle Model	382
20.3.1	Exploration of the Problem Situation	383
20.3.2	Feasibility and Quality of Interaction	384
20.3.3	Demonstration and Validation	385
20.3.4	Assisted Reality	386
20.4	Facilitators of Experience Research	387
20.4.1	Prototypes	387
20.4.2	Experiments	389
20.4.3	Experience and Knowledge Management	390
20.4.4	Cooperation	390
20.5	Example Developments in Experience Research	391
20.5.1	Living Tomorrow	391
20.5.2	Philips HomeLab	391
20.5.3	Telenor's House of the Future	392
20.5.4	Brazilian Sao Paulo e-Government Facility	392

XXII Contents

20.5.5 Responsive Home	392
20.5.6 Innovation Lab Katrinebjerg	393
20.5.7 Intelligent House Duisburg Innovation Center – inHaus	393
20.6 Challenges	394
