

Contents

Frequently Used Notation	xi
Chapter 0. Introduction	1
Chapter 1. Preliminary Material: Extension Theorems, Martingales, and Compactness	7
1.0 Introduction	7
1.1 Weak Convergence, Conditional Probability Distributions and Extension Theorems	7
1.2 Martingales	19
1.3 The Space $C([0, \infty); R^d)$	30
1.4 Martingales and Compactness	36
1.5 Exercises	42
Chapter 2. Markov Processes, Regularity of Their Sample Paths, and the Wiener Measure	46
2.1 Regularity of Paths	46
2.2 Markov Processes and Transition Probabilities	51
2.3 Wiener Measure	56
2.4 Exercises	60
Chapter 3. Parabolic Partial Differential Equations	65
3.1 The Maximum Principle	65
3.2 Existence Theorems	71
3.3 Exercises	79
Chapter 4. The Stochastic Calculus of Diffusion Theory	82
4.1 Brownian Motion	82
4.2 Equivalence of Certain Martingales	85
4.3 Itô Processes and Stochastic Integration.	92
4.4 Itô's Formula	104
4.5 Itô Processes as Stochastic Integrals	107
4.6 Exercises	111
Chapter 5. Stochastic Differential Equations	122
5.0 Introduction	122
5.1 Existence and Uniqueness	124

5.2 On the Lipschitz Condition	131
5.3 Equivalence of Different Choices of the Square Root	132
5.4 Exercises	134
Chapter 6. The Martingale Formulation	136
6.0 Introduction	136
6.1 Existence	139
6.2 Uniqueness: Markov Property	145
6.3 Uniqueness: Some Examples	149
6.4 Cameron-Martin-Girsanov Formula	152
6.5 Uniqueness: Random Time Change	157
6.6 Uniqueness: Localization	161
6.7 Exercises	165
Chapter 7. Uniqueness	171
7.0 Introduction	171
7.1 Uniqueness: Local Case	174
7.2 Uniqueness: Global Case	187
7.3 Exercises	190
Chapter 8. Itô's Uniqueness and Uniqueness to the Martingale Problem	195
8.0 Introduction	195
8.1 Results of Yamada and Watanabe	195
8.2 More on Itô Uniqueness	204
8.3 Exercises	207
Chapter 9. Some Estimates on the Transition Probability Functions	208
9.0 Introduction	208
9.1 The Inhomogeneous Case	209
9.2 The Homogeneous Case	233
Chapter 10. Explosion	248
10.0 Introduction	248
10.1 Locally Bounded Coefficients	249
10.2 Conditions for Explosion and Non-Explosion	254
10.3 Exercises	259
Chapter 11. Limit Theorems	261
11.0 Introduction	261
11.1 Convergence of Diffusion Process	262
11.2 Convergence of Markov Chains to Diffusions	266
11.3 Convergence of Diffusion Processes: Elliptic Case	272
11.4 Convergence of Transition Probability Densities	279
11.5 Exercises	283
Chapter 12. The Non-Unique Case	285
12.0 Introduction	285
12.1 Existence of Measurable Choices	286
12.2 Markov Selections	290

12.3 Reconstruction of All Solutions	296
12.4 Exercises	302
Appendix	304
A.0 Introduction	304
A.1 L_p Estimates for Some Singular Integral Operators	306
A.2 Proof of the Main Estimate	315
A.3 Exercises	323
Bibliographical Remarks	328
Bibliography	331
Index	337
