
Contents

1	Gaussian measures in Hilbert spaces	1
1.1	Notations and preliminaries	1
1.2	One-dimensional Hilbert spaces	2
1.3	Finite dimensional Hilbert spaces	3
1.3.1	Product probabilities	3
1.3.2	Definition of Gaussian measures	4
1.4	Measures in Hilbert spaces	5
1.5	Gaussian measures	8
1.5.1	Some results on countable product of measures	9
1.5.2	Definition of Gaussian measures	12
1.6	Gaussian random variables	15
1.6.1	Changes of variables involving Gaussian measures	17
1.6.2	Independence	18
1.7	The Cameron–Martin space and the white noise mapping	21
2	The Cameron–Martin formula	25
2.1	Introduction and setting of the problem	25
2.2	Equivalence and singularity of product measures	26
2.3	The Cameron–Martin formula	30
2.4	The Feldman–Hajek theorem	32
3	Brownian motion	35
3.1	Construction of a Brownian motion	35
3.2	Total variation of a Brownian motion	39
3.3	Wiener integral	42
3.4	Law of the Brownian motion in $L^2(0, T)$	45
3.4.1	Brownian bridge	47
3.5	Multidimensional Brownian motions	48

4	Stochastic perturbations of a dynamical system	51
4.1	Introduction	51
4.2	The Ornstein–Uhlenbeck process	56
4.3	The transition semigroup in the deterministic case	57
4.4	The transition semigroup in the stochastic case	59
4.5	A generalization	66
5	Invariant measures for Markov semigroups	69
5.1	Markov semigroups	69
5.2	Invariant measures	72
5.3	Ergodic averages	75
5.4	The Von Neumann theorem	76
5.5	Ergodicity	78
5.6	Structure of the set of all invariant measures	80
6	Weak convergence of measures	83
6.1	Some additional properties of measures	83
6.2	Positive functionals	85
6.3	The Prokhorov theorem	89
7	Existence and uniqueness of invariant measures	93
7.1	The Krylov–Bogoliubov theorem	93
7.2	Uniqueness of invariant measures	95
7.3	Application to stochastic differential equations	98
7.3.1	Existence of invariant measures	98
7.3.2	Existence and uniqueness of invariant measures by monotonicity	101
7.3.3	Uniqueness of invariant measures	105
8	Examples of Markov semigroups	109
8.1	Introduction	109
8.2	The heat semigroup	110
8.2.1	Initial value problem	113
8.3	The Ornstein–Uhlenbeck semigroup	115
8.3.1	Smoothing property of the Ornstein–Uhlenbeck semigroup	118
8.3.2	Invariant measures	121
9	L^2 spaces with respect to a Gaussian measure	125
9.1	Notations	125
9.2	Orthonormal basis in $L^2(H, \mu)$	126
9.2.1	The one-dimensional case	126
9.2.2	The infinite dimensional case	129

9.3	Wiener–Itô decomposition	131
9.4	The classical Ornstein–Uhlenbeck semigroup	134
10	Sobolev spaces for a Gaussian measure	137
10.1	Derivatives in the sense of Friedrichs	138
10.1.1	Some properties of $W^{1,2}(H, \mu)$	140
10.1.2	Chain rule	141
10.1.3	Gradient of a product	142
10.1.4	Lipschitz continuous functions	142
10.1.5	Regularity properties of functions of $W^{1,2}(H, \mu)$..	144
10.2	Expansions in Wiener chaos	145
10.2.1	Compactness of the embedding of $W^{1,2}(H, \mu)$ in $L^2(H, \mu)$	148
10.3	The adjoint of \overline{D}	149
10.3.1	Adjoint operator	149
10.3.2	The adjoint operator of \overline{D}	149
10.4	The Dirichlet form associated to μ	151
10.5	Poincaré and log-Sobolev inequalities	155
10.5.1	Hypercontractivity	159
10.6	The Sobolev space $W^{2,2}(H, \mu)$	161
11	Gradient systems	165
11.1	Introduction and setting of the problem	165
11.1.1	Assumptions and notations	166
11.1.2	Moreau–Yosida approximations	168
11.2	A motivating example	168
11.2.1	Random variables in $L^2(0, 1)$	170
11.3	The Sobolev space $W^{1,2}(H, \nu)$	172
11.4	Symmetry of the operator N_0	174
11.5	Some complements on stochastic differential equations ..	176
11.5.1	Cylindrical Wiener process and stochastic convolution	176
11.5.2	Stochastic differential equations	179
11.6	Self-adjointness of N_2	182
11.7	Asymptotic behaviour of P_t	187
11.7.1	Poincaré and log-Sobolev inequalities	188
11.7.2	Compactness of the embedding of $W^{1,2}(H, \nu)$ in $L^2(H, \nu)$	190
A	Linear semigroups theory	193
A.1	Some preliminaries on spectral theory	193
A.1.1	Closed and closable operators	193

A.2 Strongly continuous semigroups	195
A.3 The Hille–Yosida theorem	199
A.3.1 Cores	203
A.4 Dissipative operators	204
Bibliography	207
